

## Artificial Recharge to ground water through Dug wells (Dug well Recharge scheme)

### Introduction

Ground water plays a vital role in food production, drinking water supply, drought mitigation, economic development etc. besides environment sustenance in the country. Presently more than 85% of rural water supply, 50 % of urban water needs and 50% of water requirement for irrigation in the country are met from ground water sources. As per the latest ground water resource assessment carried out by Central Ground water Board (CGWB) jointly with state Ground Water Departments, out of 5723 assessment units (Block/Talukas/Mandals) in the country, the situation in 1615 units is a matter of serious concern. In all. 839 units are over-exploited, 226 units are critical and 550 units are semi-critical. Many areas of the country underlain by hard rock aquifers having limited storage potentials are facing acute problems of over exploitation and depletion of ground water resources. About 80% of these ground water stressed areas (OE/Critical and Semi-critical) are located in the hard rock area in the States of Andhra Pradesh, Gujarat, Karnataka, Madhya Pradesh, Maharashtra, Rajasthan and Tamil Nadu where rapid decline of ground water levels has been observed on long term basis. Over exploited, Critical and Semi critical blocks falling in seven states mentioned above are shown in Map 1.

Artificial recharge of ground water is one of the most efficient ground water management tools for ensuring sustainability of ground water resources. The efficacy of demonstrative artificial recharge structures constructed by CGWB and State Government & Non-Governmental Organizations (NGOs) in different hydrogeological and agro climatic regimes of the country has been duly established and evaluations of the projects have reflected the importance of conservation and ground water recharge in controlling decline in ground water levels, resources augmentation and increased sustainability of wells besides mitigation of ground water quality problems.

Keeping in view the concerns regarding the problems of over exploitation of ground water resources in the country as well as to ensure sustainable water resources management and assured irrigation facilities in the affected areas, the dug well recharge scheme is being implemented.

The Dug well Recharge scheme is a State sector Scheme. It is phased over three years, being taken up in XI plan period at an estimated cost of **1798.71 Crores**. The Scheme will be implemented by the respective State Government in association with Panchayati Raj Institutions (PRIs), CGWB, NABARD, NGOs etc.,. Under the scheme, dug well recharge structures will be installed the 4.455 million existing irrigation dug wells of the identified beneficiaries.

Anticipated benefits of the scheme will include:

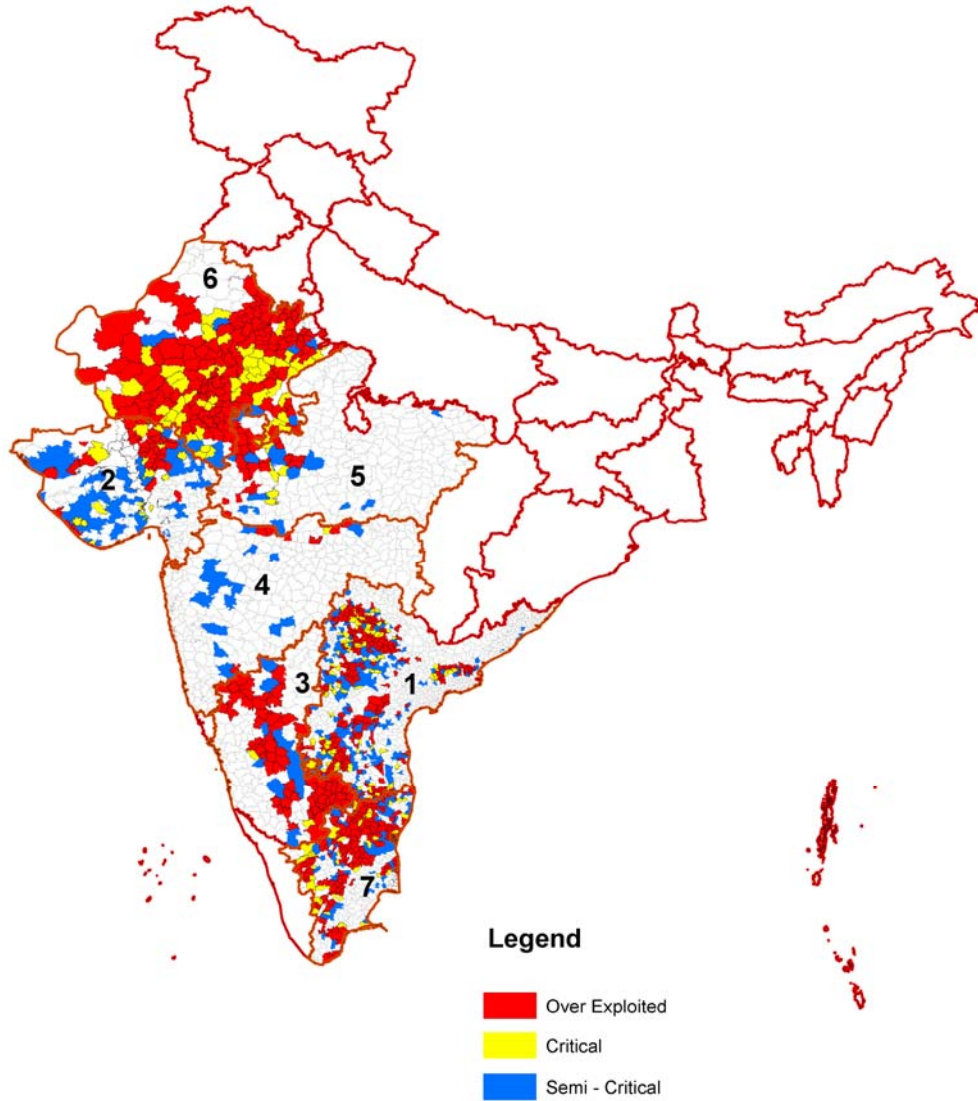

- Ground water recharge through existing dug wells in favorable catchments like agricultural fields will facilitate improvement in ground water situation in the affected areas.
- The recharge programme will increase the sustainability of wells during lean periods and will improve the overall irrigated agricultural productivity, drinking water availability, socio-economic conditions and quality of life of the people in the affected areas.
- The recharge Programme will also help improve the quality of ground water especially in the fluoride-affected areas.
- The scheme would facilitate strengthening of the institutional framework, creation of awareness and capacity building of beneficiaries and personnel involved in project implementation and overall community involvement in water resources management in the affected areas.
- Experience sharing for replication of similar recharge programmes in other ground water stressed areas in the country.

State Level steering committees (SLSC) and District Level Implementation and Monitoring Committees (DLIMCs) would be constituted at the state level to ensure effective implementation of the scheme. A Nodal Department would also be identified by the state government with overall responsibility for planning, execution and monitoring of the scheme.

Regional offices of CGWB, State Ground water Boards (SGWB) and Water and Land Management Institutions (WALMI) will provide technical support in implementation of scheme.

Details of blocks/mndals proposed to be included in the scheme are furnished in tables (A) to ( G)

Map Showing Distribution of Over Exploited, Critical and Semi-Critical Assessment Units in Seven States\*

\* Andhra Pradesh (1), Gujrat (2), Karnataka (3), Maharashtra (4), Madhya Pradesh (5), Rajasthan (6) and Tamil Nadu (7)
