**INCEPTION REPORT ON
DETAILED STUDY ON AQUIFER MAPPING AND MANAGEMENT
IN PARTS OF VIJAYAWADA, GUNTUR AND AMARAVATHI
URBAN AGGLOMERATE & IT'S SURROUNDING AREAS,
ANDHARA PRADESH UNDER NAQUIM 2.0**

1. Introduction

The Aquifer Mapping and Management programme (NAQUIM) was launched in India by CGWB in the year 2012 with the objectives of delineating aquifers, characterizing aquifers and preparing aquifer management plans. National level mapping of Aquifers on 1:50,000 scale was considered sufficient for planning requirements up to block level 1:50,000 scale.

Some of the important uses of Aquifer mapping at 1:50,000 scale include identification of suitable areas for ground water based supply to large urban agglomerations, determine sustainability of groundwater development, identification of aquifers capable of providing water supply during protracted drought periods, prioritization of aquifers for managed aquifer recharge, identification of aquifers and determination of their suitability for various purposes in regions where new urban centres or industrial hubs are likely to come up in future, planning of integrated ground water recharge schemes, issuing advisories to the state agencies on repercussions of continued development of groundwater in select areas, recommendations to state agencies in respect of areas that have prospects for ground water development etc. The entire targeted area has been covered by 2022-23.

The NAQUIM outputs have been useful for sustainable ground water management in numerous ways as enumerated above, large scale implementation of its recommendations at ground level by the user agencies has been lacking. As per the feedback received from the agencies using the NAQUIM outputs, major limitations of the ongoing studies include i) non-availability of printed maps at usable scales and ii) lack of sitespecific recommendations for implementation at Panchayat or village level. Keeping the above limitations in mind and considering the future requirements, broad objectives of NAQUIM 2.0 is proposed.

2. Priority types

NAQUIM 2.0 is designed to provide detailed information to support groundwater management decisions at ground level. Since the issues are different in different areas, the studies under NAQUIM 2.0 are proposed as issue specific and will be undertaken in prioritized focus areas. Broadly, 11 priority areas viz., (i) Water Stressed Areas, (ii) Urban Agglomerate, (iii) Coastal Areas, (iv) Industrial Clusters and Mining Areas, (v) Areas with Springs as the principal source, (vi) Areas with Deeper Aquifers, (vii) Ground Water Contamination, (viii) Autoflow zones, (ix) Canal Command Areas, (x) Areas with poor ground water quality and (xi) Other specific Issues are

identified in the country based on ground water related issues. Out of the above 11 priority areas, the current study area is chosen under '**Urban Agglomerate**' category.

3. Study area

(a) Geographical area: The study area falling in and around Vijayawada, Guntur and Amaravathi urban agglomerate covered a geographical area of 879 sq.km lies between North latitudes $16^{\circ} 13'30''$ to $16^{\circ} 39' 13''$ and East longitudes $80^{\circ} 19' 19''$ to $80^{\circ} 45'54''$ falling in SOI toposheets 65 D/6, D/7, D/8, D/10, D/11 and D/14 on 1:50,000 scale. The area covered about 81 villages including Vijayawada and Guntur urban areas distributed in 11 mandals and are falling in 3 districts. The details of the administrative boundary distributed in the study area is given in below table.

Sl.No .	District	Mandals	Villages
1	Guntur	Guntur, Mangalagiri, Medikonduru, Pedakakani, Tadepalle, Tadikonda and Thullur (Total – 7 mandals)	Ankireddipalem (Rural), China Palakaluru, Etukur, Gorantla, Guntur (M Corp.), Guntur (Rural), Jonnalagadda, Koritapadu, Nallapadu (Rural), Peda Palakaluru, R.Agraharam, Atmakur (Rural), Chinakakani, Kaza, Krishnayapalem, Kuragallu, Mangalagiri (M), Mangalagiri (Rural), Nidamarru, Nowlur (Rural), Nutakki, Pedavadlapudi, Pericherla, Agatha Varappadu, Koppuravuru, Nambur, Pedakakani, Takkellapadu, Uppalapadu, Venigandla, Ippatam, Kolanukonda, Kunchanapalle, Penumaka, Tadepalli, Undavalli (Rural), Vaddeswaram, Kantheru, Lam, Tadikonda, Kondan Rajupalem, Lingayapalem, Malkapuram, Mandadam, Nelapadu, Rayapudi, Thullur, Uddandarayunipalem, Velagapudi and Venkatapalem (Total – 50 villages, 620 sq.km, 71%)
2	Krishna	Penamaluru (Total – 1 mandal)	Enamalakuduru, Kannuru, Penamaluru, Poranki (Rural) and Tadigadapa (Total – 5 villages, 37 sq.km, 4%)
3	NTR	Ibrahimpatnam, Vijayawada (Rural) and Vijayawada (Urban) (Total – 3 mandals)	Gudurupadu, Guntupalle, Ibrahimpatnam, Jupudi, Kondapalle, Malkapuram, Trilochanapuram, Ambapuram, Done Atkuru, Enikepadu, Gollapudi, Gudavalli, Jakkampudi, Kundavari Kandrika, Nidamanuru, Nunna, Paidurupadu, Pathapadu, Phiryadi Nainavaram, Prasadampadu, Ramavarapaddu, Rayanapadu, Shabada, Tadepalle, Vemavaram and Vijayawada (M) (Total – 26 villages, 222 sq.km, 25%)

(b) Rainfall: The average annual rainfall of the study area is 864 mm, which ranges from nil rainfall in January to 160 mm in August. August month is the wettest month of the year. The mean

seasonal rainfall distribution is 547 mm from southwest monsoon (June-September), 235 mm from northeast monsoon (Oct-Dec), 8 mm rainfall in Winter (Jan-Feb) and 74 mm in summer (March – May). The season-wise percentage distribution of rainfall is 63% from southwest monsoon, 27 % from northeast monsoon, 9 % in winter and 1 % in summer.

- (c) Elevation: As per the DEM data, the elevation varies from 8 to 298 m amsl. The higher elevations are noticed towards south-west, central and north-eastern in parts of study area distributed in Guntur, Mangalagiri, Medikonduru and Tadepalle, Ibrahimpatnam, Vijayawada (Rural) and Vijayawada (Urban) mandals.
- (d) Drainage Pattern: The major river that drains through the study area is Krishna River. In general, the drainage pattern is parallel to sub-parallel and dendritic type. All the streams are seasonal in nature. The Krishna River is perennial, whereas most of the other streams are intermittent to ephemeral in nature.
- (e) Geomorphology: Geomorphologically, the study area is classified into three units based on relief, slope and soil. The two groups are (i) Hilly region and (ii) The pediplain region.
- (f) Geology: The area is underlain by various geological formations of different age groups ranging from Archaean to Recent. The Archaeanage rocks comprising the gneisses, Khondalites, Charnockites and basic dolerite dykes form are predominant.
- (g) Hydrogeology: The crystalline formations are the predominant water bearing formations with lack of primary porosity. Secondary porosity was developed through fractured joints, faults, etc and subsequent development of weathering lead to soil and weathered zone resultant to favourable locations for hydrogeology. The literature review in parts of Guntur district observed that the depth of weathering ranges from about 8 to 15m bgl followed by fractures to depth of >100 m bgl. The depth to water level ranges from <1 to 12 m bgl. The weathered zone has been tapped extensively by the dug wells and sustain four to six hours of pumping with yield up to 200m³/day, and capable of irrigating about 0.8 to 3.0 hectares. Central Ground Water Board has carried out Ground Water Exploration in Guntur district. The results show that depth of drilling ranges from 45 to 200 m bgl in hard rock areas and 25 to 430 mbgl in soft rock areas. The potential fractures were encountered between 40 and 120 m bgl. Existence of deep fractures upto 173 m bgl was also encountered. The cumulative yield of dug wells varies from 0.12 to 15 lps. The yield of bore wells in general varies between 1 to 5 lps.

4. Previous Studies- NAQUIM reports, District Brochure, Resource Assessment Report, Reappraisal Report, Systematic Survey Report, Published papers, New paper articles etc.

- District Ground Water Brochure, Krishna District, Andhra Pradesh, 2007-08
- Geophysical investigation for groundwater in upland areas of Krishna District, 2000
- Groundwater Management Studies in parts of Krishna District, Andhra Pradesh, 2002-03
- Geophysical investigations for structural studies related to groundwater exploration in parts of Guntur District, Andhra Pradesh, 2011
- Groundwater Management Studies in part of Guntur District, Andhra Pradesh, 2005-06
- Groundwater Management Studies in North Western parts of Guntur District, Andhra Pradesh, 2004-05
- District Groundwater Brochure, Guntur District, Andhra Pradesh 2018
- Hydrogeological framework and development prospects of Guntur District, Andhra Pradesh, 2003-04
- Agriculture Pollution of Groundwater in Mada-Kondaviti basin Guntur District Andhra Pradesh, 2003
- Groundwater Management Studies in parts of Guntur District, Andhra Pradesh, 2004-05
- Geophysical surveys for selection of drilling sites in parts of Guntur District, Andhra Pradesh, 2016-17

5. Objectives of the present study

- i) Providing high resolution ground water level, ground water quality etc.
- ii) Specific recommendations for implementation at Panchayat/village level on Recharge structures and Roof Top Rain Water Harvesting and amount water calculated in the cost benefit ratio basis.
- iii) Resolving issue-based scientific inputs for ground water management at Panchayat/village level with reference to drinking water demand.
- iv) providing maps to the users at usable scales
- v) A study on water demand and supply over the years on surface/ground water
- vi) Salinity demarcation map with reference to depth of occurrence
- vii) Feasible sites recommendation for exploration with details depth, discharge and duration of pumping.
- viii) Projecting the demand for drinking water usage from Ground Water for next 10 years.
- ix) Projecting the demand for irrigation water surface and ground water for next 10 years.

6. Existing data availability- EW/OW, VES/TEM, WL (NHS and Aquifer Mapping), WQ, Infiltration Test, Pumping Tests

Existing data locations under different themes

Theme	Existing	Annexure

Pz construction (Industrial cluster)	7	Annexure – VI

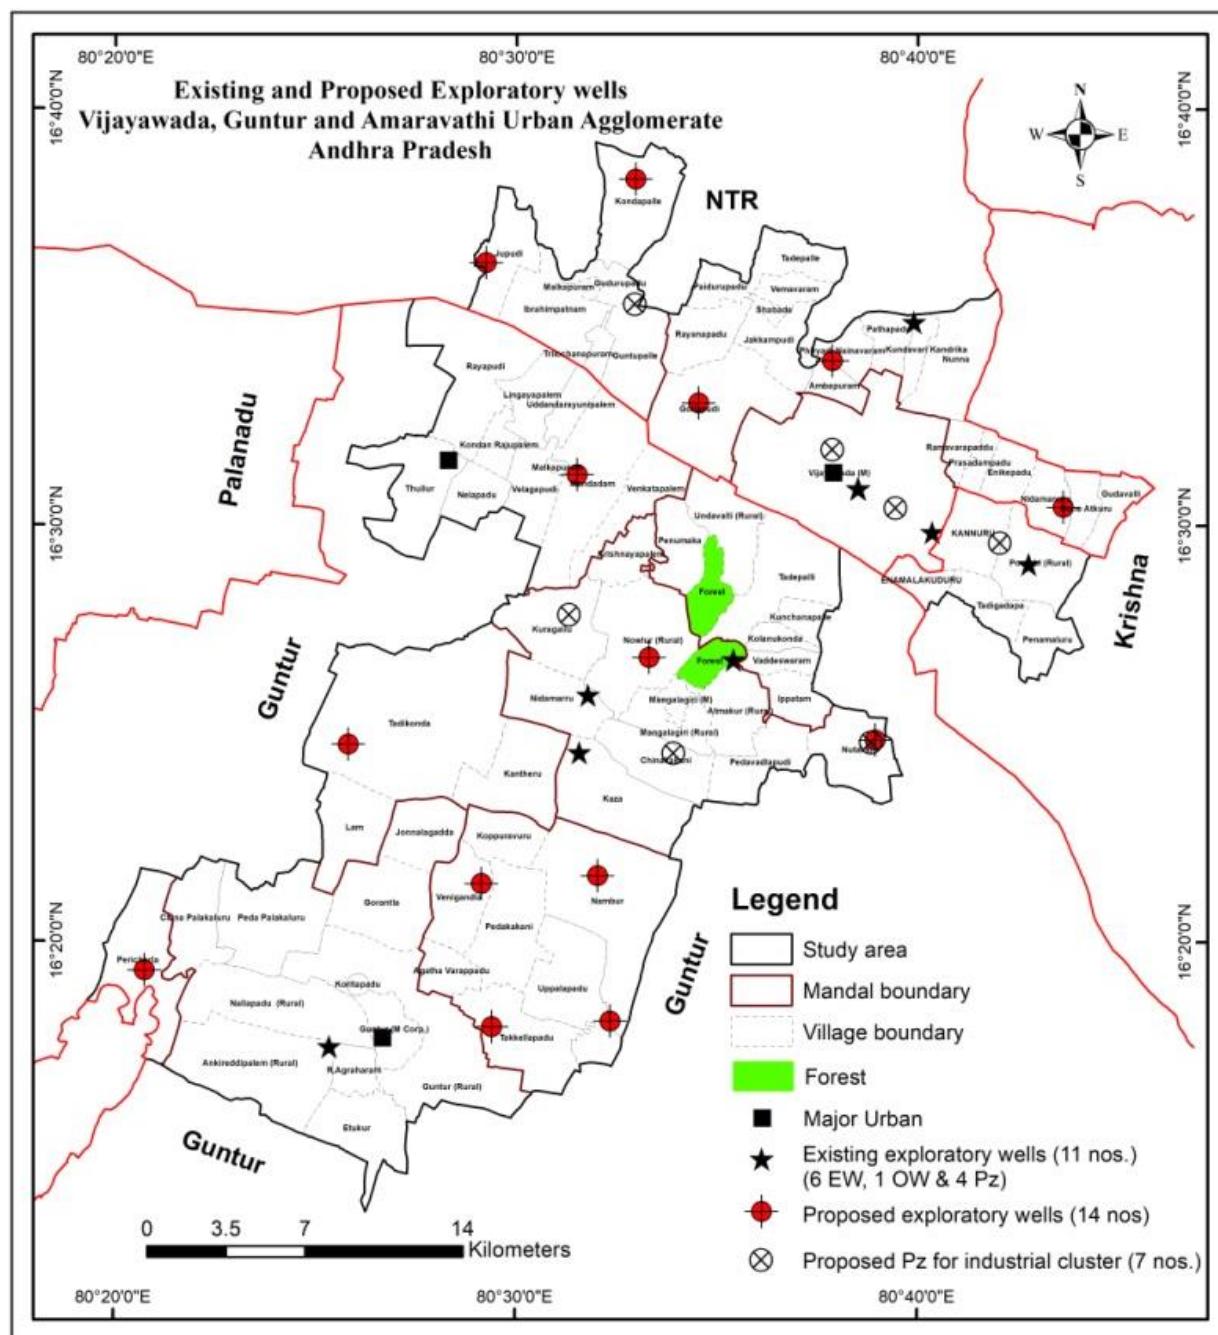

Fig. 5: Existing and proposed locations for exploratory wells

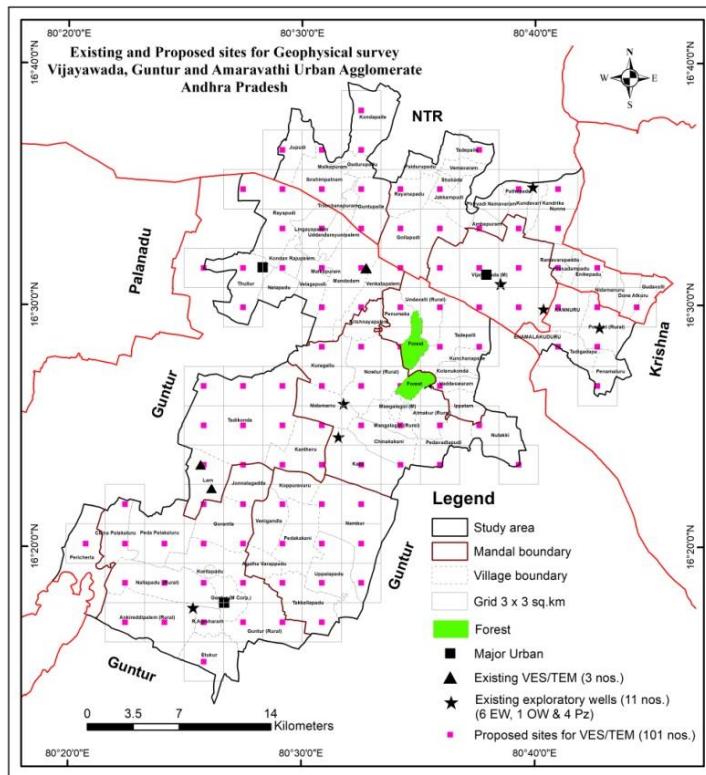

Fig. 6: Existing and proposed locations for geophysical survey

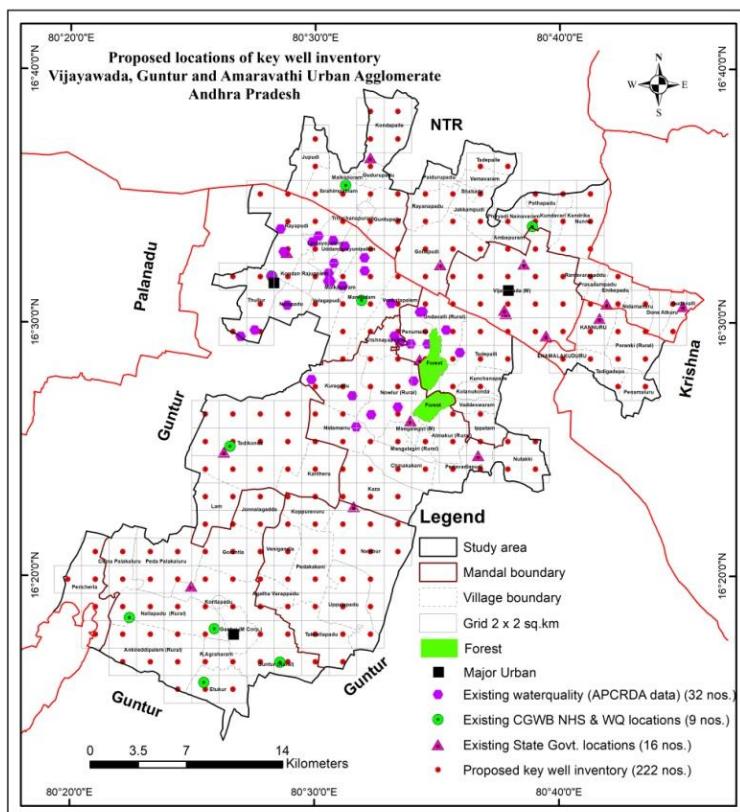

Fig. 6: Existing and proposed locations for key well monitoring

8. New Data generation plan- Activity wise monthly targets for new data generation. Plan for integration with other ongoing activities

- Key well establishment
- Collection of information from local agencies or well owners about well depth, slotted zone/fracture zone, discharge , static water level and random draw down data, Irrigation Practices, cropping pattern and related information.
- Water level measurement
- Water sample collection
- Infiltration, Slug test, Pumping test
- Discussions with farmers and other users at ground level.
- Instantaneous discharge measurements along with data on pump working hour for estimating unit draft.

9. Month-wise activity plan – field visits, visits to local offices, training, report writing, sharing with the concerned departments, entering data in WIMS, Progress Reporting in MIS, uploading reports and media in publications warehouse

- Key well establishment
- Collection of information from local agencies or well owners about well depth, slotted zone/fracture zone, discharge , static water level and random draw down data, Irrigation Practices, cropping pattern and related information.
- Water level measurement
- Water sample collection
- Infiltration, Slug test, Pumping test
- Discussions with farmers and other users at ground level.
- Instantaneous discharge measurements along with data on pumping hours for estimating unit draft.
- Entering of data in WIMS
- Drafting of report
- Issuance of report
- Presentation of outcome of report to District Administration
- Sharing of report with concerned departments

10. Composition of the team

The NAQUIM 2.0 studies are envisaged to be multidisciplinary. Thus, it is proposed to have a team of experts for carrying out the activities proposed. Each team taking up the studies will have the following composition.

Sl.No.	Role	Name of Officers
1	Team Lead	Dr.M.Sudheer Kumar, Sc-D (Hydrogeology)

2	Expert 1 (Hydrogeology)	Dr.S.S.Vittala, Sc-B (Hydrogeology)
3	Expert 2 (Hydrogeology)	Dr.D.Ananth Rao, Asst. Hydrogeology
4	Expert (Geophysics)	Sh.P.Raghavendra, Sc-B (Geophysics)
5	Expert (Hydrochemistry)	Sh.Y.Satya Kumar, Sc-B (Chem)

11. Team-member-wise responsibilities and monthly targets for entering in the MIS

(a) Team-member wise responsibilities:

Roles	Responsibility
Team Lead	<ul style="list-style-type: none"> - Planning, Supervision and Execution of the Project - Work distribution and monitoring of activities of other team members - Preparation of the inception report. - Timely delivery of the envisaged outputs - Finalisation of the management plan - Presentations at different forums, sharing of the outputs. - Preparation of the draft report as per the approved Quality Standards and its Final Submission.
Expert (Hydrogeology)-1	<ul style="list-style-type: none"> - Field Data Collection (Exploration, Pz construction, Water Level, Water Quality, Pumping Tests, Infiltration tests, demand/supply data, sample surveys and others) - Sample collection for quality studies - Secondary Data collection - Entering data in database (WIMS) - Integration of data, preparation of thematic maps, preparation cross sections etc. - Consultation with allied experts like agriculture, irrigation, agro-economics etc. - Preparation of Management Plan - Assisting the Team Lead in preparing maps and reports
Expert (Hydrogeology)-2	<ul style="list-style-type: none"> - Field Geophysical Surveys - Interpretation of field data - Entering data in database (WIMS) - Integration with existing geophysical and lithology data - Preparation of inferred lithologs - Suggesting potential sites for construction of water wells/artificial recharge - Preparation of Tables, graphs and maps for reports - Assisting the Team Lead in preparing the Report
Expert (Geophysics)	<ul style="list-style-type: none"> - Sample collection for quality studies - Analysis of samples. - Integration with existing data - Validation and interpretation of data - Entering data in database (WIMS) - Preparation of Tables, graphs and maps for reports - Assisting the Team Lead in preparing the reports
Expert (Hydro chemistry)	<ul style="list-style-type: none"> - Sample collection for quality studies - Analysis of samples. - Integration with existing data - Validation and interpretation of data - Entering data in database (WIMS) - Preparation of Tables, graphs and maps for reports - Assisting the Team Lead in preparing the reports

(b) 5yMonth-wise targets to be achieved:

Period	Assignments to be carried out	Team Member
1 st to 3 rd week of April	<ul style="list-style-type: none"> ➤ Base map Preparation ➤ Preparation of the Inception Report 	Team Lead

Period	Assignments to be carried out	Team Member
4 th week of April 2 nd week of June (20-25 days fieldwork)	➤ Field Data Collection (Pre-Monsoon) ➤ Sample Surveys and User Feedback	Expert 1 (Hydrogeology) Expert 2 (Hydrogeology) Expert (Geophysics) Expert (Hydrochemistry)
15 th June to 15 October	➤ Data Analysis and Interpretation ➤ Workshops and mid-term review by NLEC	Expert 1 (Hydrogeology) Expert 2 (Hydrogeology) Expert (Geophysics) Expert (Hydrochemistry)
15 th October to 15 th December (20 to 25 days field work)	➤ Field Data Collection (Post Monsoon) ➤ Sample Surveys and User Feedback	Expert 1 (Hydrogeology) Expert 2 (Hydrogeology) Expert (Geophysics) Expert (Hydrochemistry)
15 th December to 15 th January	➤ Data Analysis and Draft Report Preparation ➤ Other ongoing field activities	Expert 1 (Hydrogeology) Expert 2 (Hydrogeology) Expert (Geophysics) Expert (Hydrochemistry)
15 th January to 15 th February (20 to 25 days fieldwork)	➤ Field truthing of Management plan & RWH & AR Plan ➤ Final Stage field visit for various field data collection & generation based on the requirement (data gap filling) as observed during draft report preparation	Team Lead Expert 1 (Hydrogeology) Expert 2 (Hydrogeology)
15 th February to 15 th March	➤ Modification of draft report with additional information collected by the above mentioned field checks ➤ Scrutiny and Finalisation of the Report	Team Lead Expert 1 (Hydrogeology) Expert 2 (Hydrogeology) Expert (Geophysics) Expert (Hydrochemistry)
15 th to 31 st March	➤ Sharing of the reports with CHQ, SGWCC and DM/DC	Team Lead Expert 1 (Hydrogeology) Expert 2 (Hydrogeology) Expert (Geophysics) Expert (Hydrochemistry)

Sr No.	Activity	Officer Deployed	Months (April to March)											
			Apr	May	Jun	Jul	Aug	Sent	Oct	Nov	Dec	Jan	Feb	Mar
A	HYDROGEOLOGY													
1	Compilation of available data and	Hg1 & Hg2												
2	Preparation of base maps	Hg1												
3	Identification of data gap and planning for data generation	Hg1 & Hg2												
4	Preparation of Inception report	TL												
5	Field work for establishment of key wells, pre-monsoon water level monitoring and groundwater sampling.	Hg1 & Hg2												
6	Field work for additional data and information	TL & Hg1 & Hg2 & Gp												
7	Post-monsoon WL monitoring from key wells and groundwater sampling	Hg1 & Hg2 & Gp												
8	Final Stage field visit for various field data collection & generation based on the requirement (data gap filling) as observed during draft report preparation	TL, Hg1 & Hg2 & Gp & Hc												
B	GW EXPLORATION	GW EXPLORATION												
9	EW Data gap identification	TL & Hg1 & Hg2												
10	Site selection for drilling	TL & Hg1 & Hg2												
11	Attending Drilling, preparation of lithologs, Conducting Pumping test	TL & Hg1 & Hg2												
1	Preparation of Basic Data Report	Hg1 & Hg2												
C	GEOPHYSICAL STUDIES	GEOPHYSICAL STUDIES												
13	Data gap identification for VES/TEM	TL & Hg1												
14	Field work -VES/TEM	Gp												
15	Analysis and interpretation of VES/TEM data	TL & Gp												
C	CHEMICAL ANALYSIS	CHEMICAL ANALYSIS												
16	Analysis of sample collected during pre-monsoon	Hc												
17	Analysis of sample collected during post-monsoon	Hc												
18	Analysis of samples collected during exploration	Hc												
D	FIELD TRUTHING AND PREPARATION OF AQUIFER MAPS, MANAGEMENT PLANS	FIELD TRUTHING AND PREPARATION OF AQUIFER MAPS, MANAGEMENT PLANS												
19	Compilation of data and preparation of GIS based maps and management plans	TL, Hg1 & Hg2 & Gp & Hc												
20	Report Preparation	TL, Hg1 & Hg2 & Gp & Hc												
21	Field Truthing of Management Plan	TL, Hg1 & Hg2 & Gp												
22	Modification of Draft report. Scrutiny and Finalisation of the report	TL, Hg1 & Hg2												
23	Sharing of the reports with CHQ, SGWCC and DM/DC	TL, Hg1 & Hg2 & Gp & Hc												

Composition of Team

S.No.	Name of Officer	Designation	Role
1.	Dr. M. Sudheer Kumar	Sc-D	Team Leader (TL)
2.	Dr. S. S. Vittala	Sc-B	Hydrogeologist-1 (Hg-1)
3.	Dr. D. Anantha Rao	Ahg.	Hydrogeologist-2 (Hg-2)
4.	Sri. Raghavendra	Sc-B	Geophysicist (Gp)
5.	Sri. Y. Satya Kumar	Sc-B	Hydrochemist (Hc)
