Table 18	District wise categorisation of water level fluctuation (Decadal mean 2009-2018 and August 2019)	
Table 19	District wise categorisation of water level fluctuation (Decadal mean 2009-2018 and Nov 2019)	
Table 20	District wise categorisation of water level fluctuation (Decadal mean 2010-2019 and Jan 2020)	
Table 21	Summarized results of groundwater quality ranges (May 2018)	
Table 22	District wise categorisation of EC more than 3000 us/cm at 25°c	
Table 23	District wise categorisation of Chloride more than 1000 mg/l	
Table 24	District wise categorisation of Fluoride more than 1.5 mg/l	
Table 25	District wise categorisation of Nitrate more than 45 mg/l	

**LIST OF ANNEXURES**

Annexure I	Water level data of Karnataka State May 2019
Annexure II	Water level data of Karnataka State August 2019
Annexure III	Water level data of Karnataka State November 2019
Annexure IV	Water level data of Karnataka State January, 2020
Annexure V	Hydrochemical Data of Ground water monitoring station of Karnataka, May 2018

## FOREWORD

*Groundwater is a dynamic and replenishable precious natural resource. It requires to be monitored regularly and also to be appraised of the changes that are taking place in this regime. In this regard, Central Ground Water Board collects the groundwater level and quality data from the Groundwater Regime Monitoring Stations. The ground water levels are monitored four times a year during the months of May, August, November and January and ground water samples for the determination of the quality of Groundwater are collected once a year during the month of May. This report consists of the ground water level for the year 2019-20 and chemical quality data collected during May, 2019. Maps showing the depth to groundwater level in different parts of Karnataka and the changes observed in the ground water level in the last one year and the last one decade are included and discussed elaborately in the report. Groundwater stressed areas where water levels are depleting as interpreted from the available data are also delineated. The report also contains the discussions on distribution and variation of rainfall in the state for normal period. Interpretation of Chemical quality of Groundwater on the basis of the samples collected during May, 2018 is also included in the report.*

*The data has been compiled and presented by Ms. D. Dhayamalar, Sc-D, Smt. Rakhi U R., Sc-B, Dr. Lubna Kouser, Asst. Hydrologist and Dr.K. Ravichandran, Sc-D (Chem). The groundwater samples were analyzed and interpreted by Dr.K. Ravichandran, Sc-D (Chem), Smt. Lalitha B.H, STA (Chem), Dr. Sailee Bhange, STA (Chem). A lot of efforts have been put by various officers and officials of SWR, Bangalore for the timely and reliable collection of field data. The diligent labour put by Smt Sangita P. Bhattacharjee, Sc- B of Report processing section in bringing out this report in a short span of time is praise worthy.*

*It is hoped that the information contained in this year book of 2019-20 will be useful for the stake holders, planners and other user agencies associated with the developement and management of water resources in the state of Karnataka.*

Sept, 2020

(V. Kunhambu)  
Regional Director

## EXECUTIVE SUMMARY

*Central Ground Water Board, an apex Organization under Ministry of Jal Shakti, Department of Water Resources, River Development and Ganga Rejuvenation, Government of India, is carrying out the monitoring of ground water levels all over the country for generating a sound database so that the changes in ground water regime could be scientifically studied, analysed and strategies for its optimal utilization can be planned.*

*The behaviour of ground water table during the ground water year 2019-2020 in the state of Karnataka has been studied by monitoring a set of dug wells and purpose-built piezometers during the months of May 2019, August 2019, November 2019 and January 2020. As of January 2019, Central Ground Water Board, South Eastern Coastal Region, monitors 1413 dug wells and 262 tube wells/piezometers to study the ground water scenario of the state of Karnataka.*

*The present compilation relates to the year 2019-2020. It provides information pertaining to water levels and also chemical quality of the phreatic aquifer. Thematic maps depicting the ground water scenario along with geochemical quality are furnished and discussed in this report. In addition, the fluctuations in water level and piezometric surface between different time frames have been analysed and presented. Various thematic maps presented reflect the effect of rainfall received during the period of study and the long-term behaviour of water level according to ground water recharge and draft conditions obtained in various agro-climatic zones. The data on seasonal rainfall during the year are furnished to correlate the effect of the rainfall on water levels. The highest south west monsoon rainfall in the State during the year 2019 was 4542.6 mm received in Udupi and minimum of 314.7 mm is received in Kolar district. The departure of seasonal rainfall for the period mentioned ranged from -20% (Kolar district) to 89% (Belgaum district).*

*During pre monsoon 2019, about 67 % of the wells are showing depth to water level within 10 mbgl. During post monsoon 2019, about 93.5% of the wells showing depth to water level within 10 mbgl. Annual fluctuation during pre-monsoon 2019 it is observed that, 78% of the wells in the State showing fall in water level and 22% of the wells in the state showing rise in water level. During post-monsoon 2019 about 78% of the wells in the State is showing rise in water levels and 22% of the wells in the State is showing rise in water level. Decadal mean water level of 2009-2018 with respect to May 2019, 69% of wells recorded fall in water level whereas decadal mean water level of 2009-2018 with respect to November 2019, 38% of wells recorded fall in water level.*

*The chemical quality of ground water collected from 1066 Ground Water Monitoring wells representing the shallow aquifers during May 2018 indicated that in general the ground water quality in the state is fresh in about 38 % of the Monitoring wells as indicated by the EC value less than 750  $\mu\text{s}/\text{cm}$  at 25°C. In respect of chloride, the data indicated that, 98% samples are within 'permissible' limits for drinking and about 2 % samples are unsuitable for drinking purpose. Nitrate concentration in ground water indicates that 68% of the samples in the State are found to be falling under 'desirable limit 'and 32% samples are beyond permissible limits. Similarly, fluoride analysis indicates that 93 % of the samples collected were found to contain fluoride concentration in the 'permissible' (<1.5 mg/l) range and about seven percentage of the analysed samples are in the 'unsuitable' range of drinking water standards.*

# GROUNDWATER YEAR BOOK OF KARNATAKA STATE (2019-2020)

## 1.0 INTRODUCTION

The state of Karnataka has a geographical area of 1, 91, 761 sq. km. and is situated between N. Latitudes 11°31" and 18°45' and E. Longitudes 74°12' and 78°40'. For administrative purposes, the state is divided into 30 districts and 176 taluks.

The Central Ground Water Board, South Western Region is monitoring the water levels in ground water monitoring wells in the state of Karnataka four times a year, viz. May (between 20<sup>th</sup> and 31<sup>st</sup>), August (between 20<sup>th</sup> and 31<sup>st</sup>), November (between 1<sup>st</sup> and 10<sup>th</sup>) and January (between 1<sup>st</sup> and 10<sup>th</sup>). Water samples from the Ground Water Monitoring Wells are collected once in a year i.e. during May. Besides these, monitoring of monthly water levels is being carried out at selected Ground Water Monitoring Wells in Bengaluru Metropolitan area. **Table-1** gives the number of Ground Water Monitoring wells tapping the phreatic aquifers and the piezometers/tubewells/bore wells tapping the deeper semi-confined to confined aquifers during the aforesaid periods. The behaviour of water levels are analysed with reference to the rainfall pattern. The data are utilised for the assessment of ground water resource, evaluation, present status of ground water development and also for planning future development. For analytical purposes, only the data of the Ground Water Monitoring Wells tapping phreatic aquifers are considered. The data thus collected are analysed, interpreted and the Ground Water Year book is issued annually with interpreted data and thematic maps depicting the ground water scenario.

The present report discusses the regional behaviour of water levels in both shallow and deeper aquifers for the period between May 2019 and January 2020, which will enable the user agencies to plan developmental strategies. The results of the chemical analysis of water samples collected from Ground Water Monitoring Wells during May 2018 are also discussed.

The status of district-wise break-up of Ground Water Monitoring Wells is given in **Table-2**. The district-wise depth to water level data of the dugwells and depth to piezometric surface of piezometers for the measurements during May 2019, August 2019, November 2019 and January 2020 are given as **Annexures I, II, III & IV**.

Background information on physiography, drainage, rainfall, hydrogeological conditions and ground water resources development of the state are also furnished in brief for better understanding of the behaviour of water table.

**Table -1: Number of Ground Water Monitoring Wells in Karnataka during 2019-2020**

Period of Measurement	No. of Wells Monitored		
	Dug Wells	Piezometers/ Tubewells	Total
May 2019	1442	271	1713
August 2019	1436	269	1705
November 2019	1432	275	1707
January 2020	1413	262	1675

## 1.1 PHYSIOGRAPHY

The state of Karnataka is divided into four physiographic units namely

- a) The narrow **Coastal plain** along the west coast running to about 300 km from Karwar in the north to Mangalore in south. The tract is generally very narrow reaching maximum width of about 40 km at places. The general elevation of the ground varies between 0 to 200 m above mean sea level. The rivers draining the area have a westerly course.
- b) The **Malnad region** with steep mountain ranges and valleys lying immediately east of the former. The general elevation of the area varies from 200 m above mean sea level along the boundary with the coastal plain to 1872 m above mean sea level at Kudremukh. Its width varies from 50 to 100 km. Several rivers like Cauvery and Tungabhadra originate from this region.
- c) The **Northern part** of the State comprises a tableland and its general elevation ranges from 300 to 350 m above mean sea level.
- d) The **Eastern** districts towards south form a plateau, which is characterized by rolling topography with sporadic hills. The general elevation in this track varies from 600 to 1000 m above mean sea level.

## 1.2 DRAINAGE

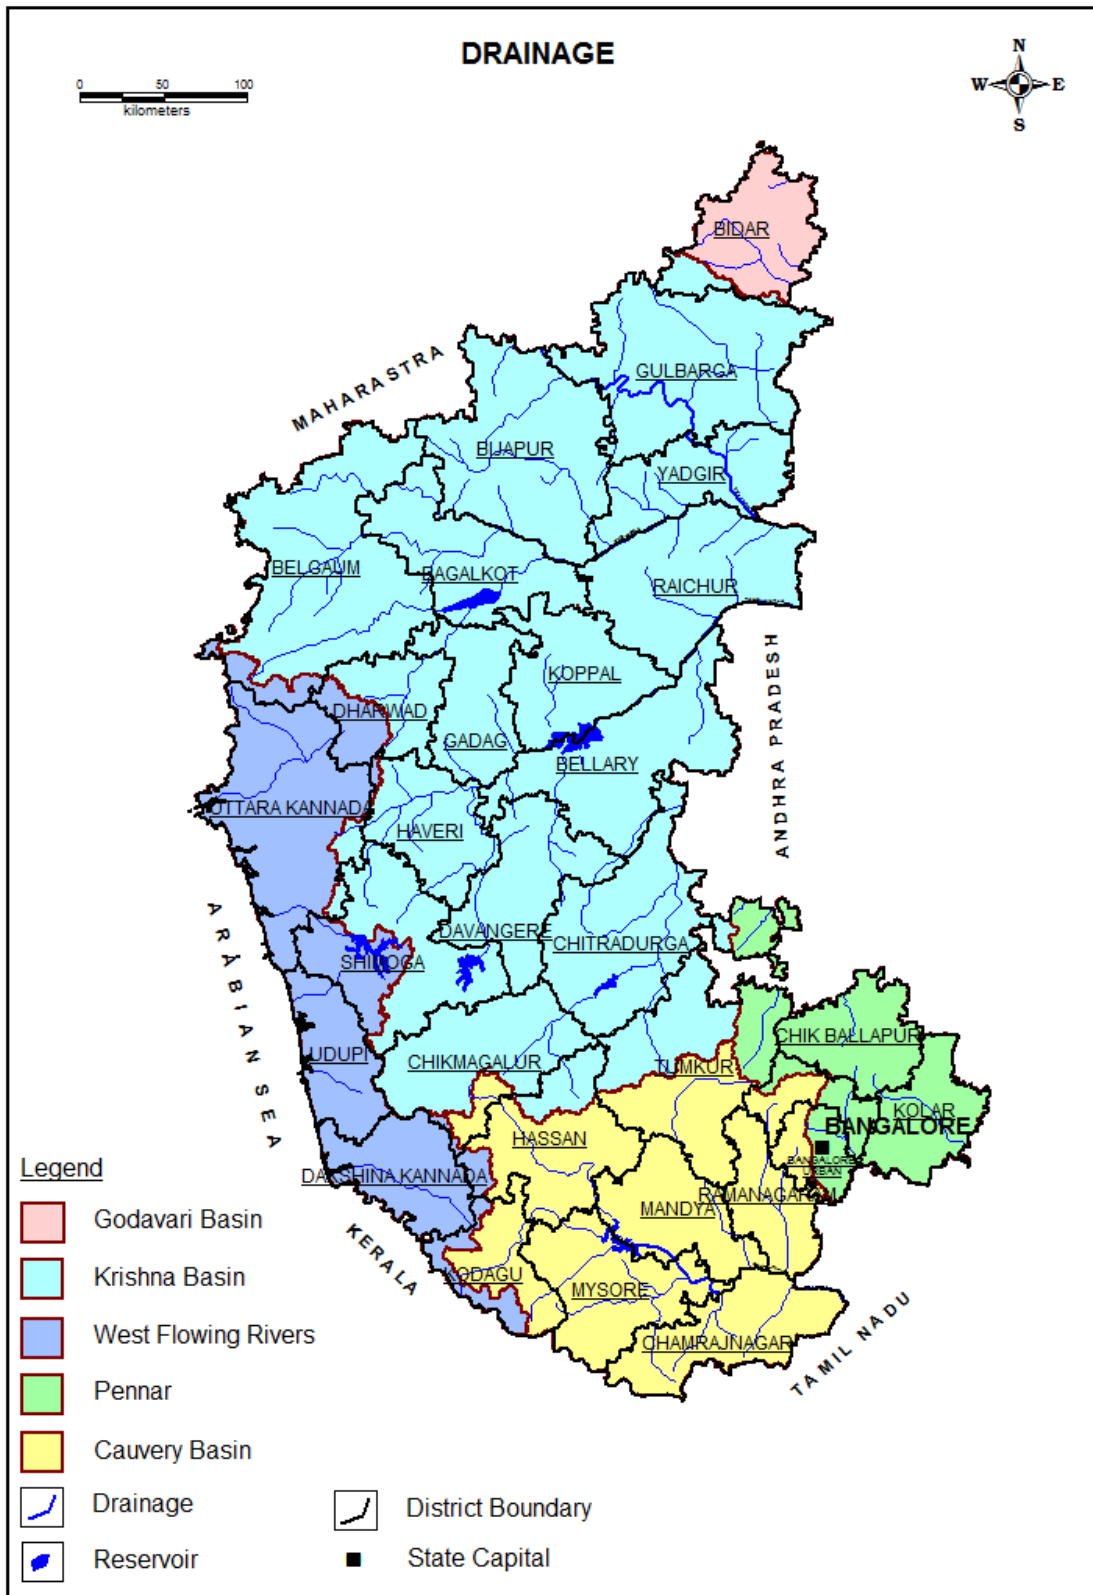

The State of Karnataka is drained by rivers like Krishna, Cauvery, Godavari, West flowing minor rivers, Palar, Pennar and Ponnaiyar. The river Krishna with its major tributaries viz. Bhima, Malaprabha, Ghataprabha, Tungabhadra, Upper Krishna and Vedavathi drains nearly 60% of the state area. Cauvery and its tributaries viz. Arkavathi, Hemavathi, Kabini, Shimsha, Suvarnavathi and Upper Cauvery drain about 18% of the State area. Palar, Pennar and Ponnaiyar, which originate from the Nandi hills in the southern part of the State drain about 7%

of the area. About 2% of the area in the northern district of Bidar is drained by the Godavari river system.

The remaining area is drained by the west flowing rivers such as Kalinadi, Netravathi, Sharavathi, Sita and Swarna etc. The details of the drainage basins and sub basins are given in **Table 3** and shown in **Plate I**.

**Table 3: Basins, Sub-Basins and Drainage Area**

Drainage		Area		District
Basin	Sub Basin	Sq. Km	%	
Godavari	Karanja	4405	2	Bidar
Krishna	Bhima	19345	10	Bidar, Bijapur, Gulbarga, Yadgir
	Malaprabha and Ghataprabha	19233	10	Belgaum, Bijapur, Dharwar.
	Tungabhadra	37786	20	Bellary, Shimoga, Chikmagalur, Dharwar,
	Upper Krishna	17685	9	Belgaum, Bijapur, Gulbarga, Raichur
	Vedavati	19222	10	Bellary, Hassan, Chijmagalur, Chitradurga,
Cauvery	Arkavati	4500	2	Bangalore Urban, Bangalore Rural,
	Hemavati	5006	3	Hassan, Chikmagalur
	Kabini	5160	3	Kodagu, Mysore
	Shimsa	7810	4	Bangalore, Mandya Hassan, Tumkur
	Suvarnavati	4050	2	Mysore
	Upper Cauvery	7747	4	Kodagu, Mandya, Mysore
West Flowing Rivers	Kalinadi	9291	5	Belgaum, Dharwar, Uttara Kannada
	Netravati	7057	4	Kodagu, Hassan, Dakshina Kannada

Ponnaiyar		2638	2	Bangalore Urban, Bangalore Rural, Kolar

## **2.0 RAINFALL**

Rainfall data of India Meteorological Department is furnished in **Table 4** and **5**. The rainfall during different periods is given below.

### **2.1 DISTRIBUTION OF PREMONSOON RAINFALL (March to May 2019)**

1. The normal seasonal rainfall ranged from 62.3 mm (Raichur and Gulbarga district) to 261 mm (Kodagu district) whereas the actual rainfall during the season varied from 14.4 mm in Udupi district and 226.1 mm in Bengaluru Rural district.
2. The departure of seasonal rainfall for the period mentioned ranged from -94% (Udupi district) to 65% (Bangalore Rural district).
3. Rainfall has been excess in Bengaluru Rural, Chikballapur and Kolar district.
4. Rainfall has been normal in the districts of Bangalore Urban, Hassan, Mandya, Mysore and Ramanagara districts.
5. Rainfall has been deficient in Bagalkot, Bellary, Bijapur, Chamarajanagar, Chikmagalur, Chitradurga, Davanagere, Dharwad, Gadag, Gulbarga, Kodagu, Koppal, Raichur and Tumkur, Vijayapura and Yadgir districts.
6. Over the remaining districts viz. Belgaum, Bidar, Dakshina Kannada, Haveri, Shimoga, Udupi and Uttara Kannada rainfall has been scanty.

### **2.2 DISTRIBUTION OF SW MONSOON RAINFALL (June to September 2019)**

1. The normal seasonal rainfall varies from 276.9 mm (Chitradurga district) to 3742.3 mm (Udupi district) whereas the actual rainfall for this period ranged from 314.7 mm in Kolar district to 4542.6 mm over Udupi district.
2. The departure of seasonal rainfall for the period mentioned ranged from -20% (Kolar district) to 89% (Belgaum district).
3. Rainfall has been excess in the districts of Bagalkot, Belgaum, Bidar, Chikmagalur, Chitradurga, Davanagere, Dharwad, Gadag, Hassan, Haveri, Mandya, Mysore, Shimoga, Udupi and Uttara Kannada.
4. Rainfall has been normal in the districts of Bangalore Rural, Bangalore Urban, Bellary, Bijapur, Chamarajanagar, Dakshina Kannada, Kodagu, , Koppal, Raichur, Tumkur, Udupi and Uttara Kannada.
5. Rainfall has been deficient in Kolar district.

**Table 4: RAINFALL STATISTICS FOR PRE-MONSOON SEASON (Mar-May) 2019**

<b>Sl. No</b>	<b>NAME</b>	<b>ACTUAL (mm)</b>	<b>NORMAL (mm)</b>	<b>% DEPARTURE</b>

### 3.0 HYDROGEOLOGY

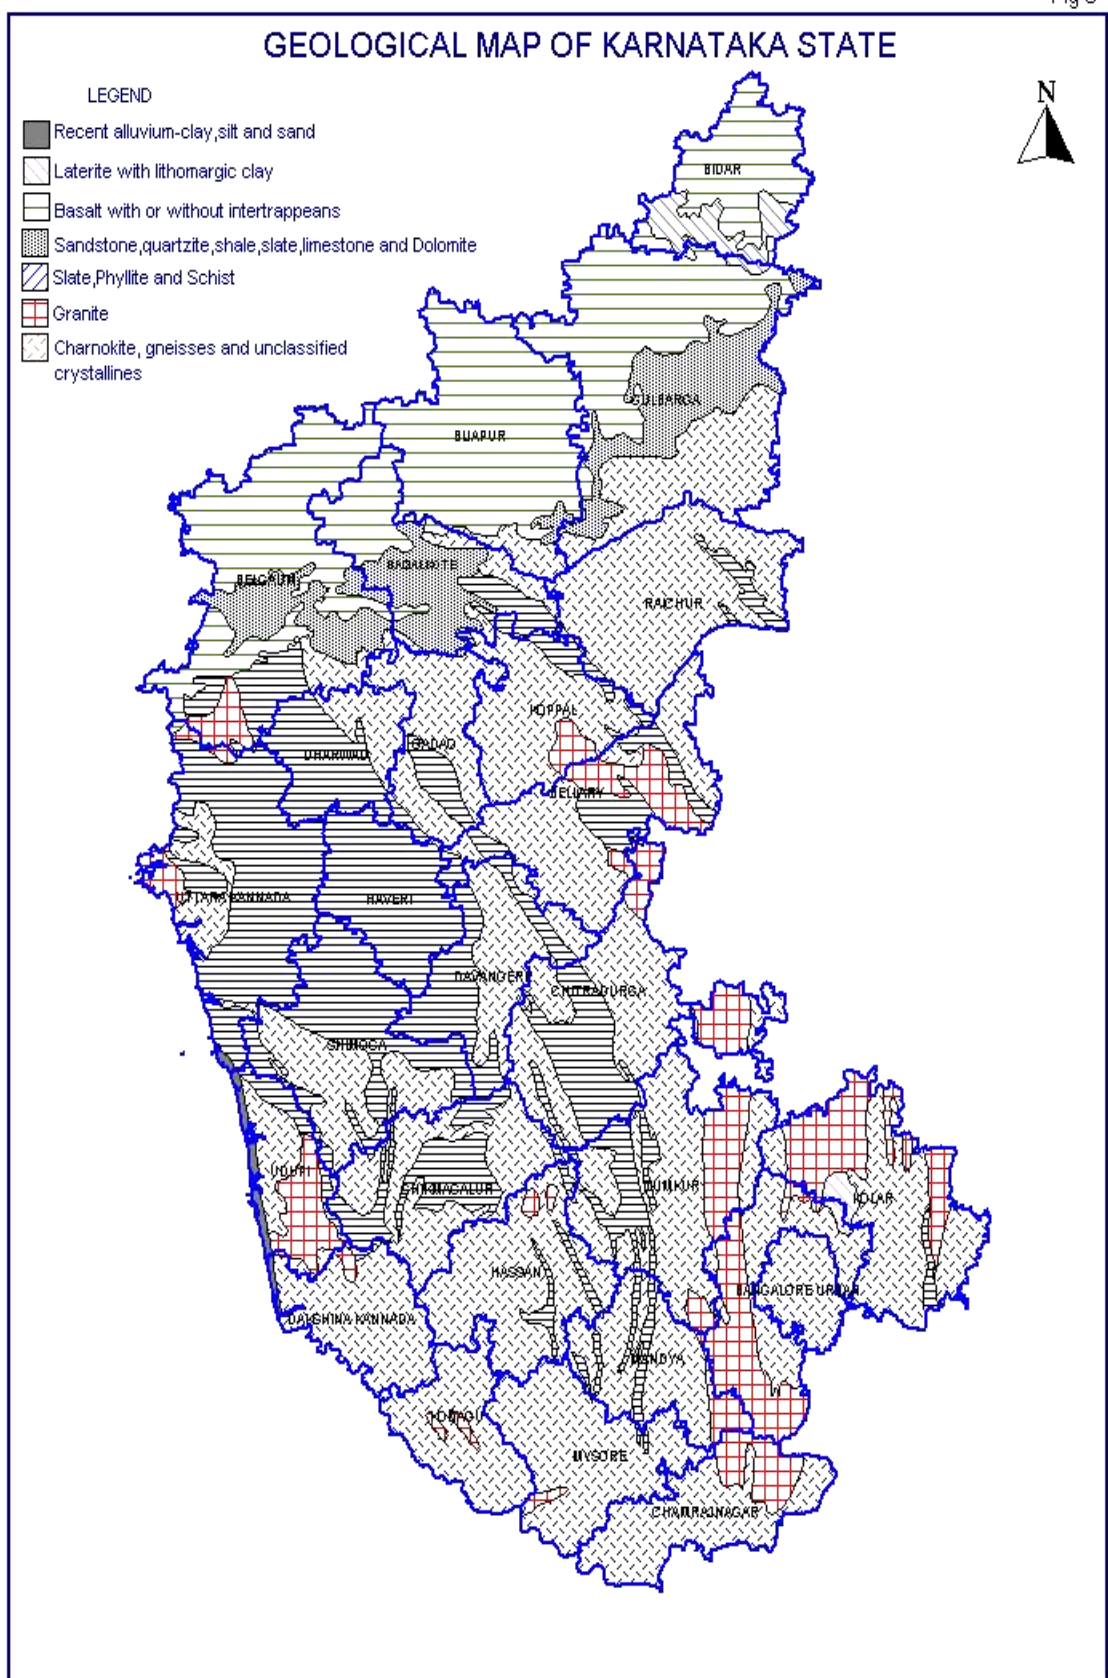

The state of Karnataka is underlain by geological formations ranging in age from Archaean to Recent. Major portion of the State is covered by Peninsular Gneisses, Granites and Dharwarian Schists of Archaean age. Substantial area in the northern part of Karnataka is underlain by basalts, which form a continuation of the Deccan Traps occurring in Maharashtra. The sedimentaries comprising Bhima and Kaladgis occupy a small area in the northern districts. The recent alluvium is restricted to a narrow belt in the coastal area and along stream courses (**Plate-II**). The geological succession in the State is presented in **Table 6**. Majority of the stations are located in Granitic Gneissic region.

Except for the alluvium, which occurs in a limited area, the State is occupied mainly by crystalline rocks and consolidated sedimentaries, which do not possess primary porosity except for the Basalts, which have a limited primary porosity in the form of vesicular zones. Secondary porosity introduced in them through weathering, fracturing and jointing produces the void spaces to hold and transmit ground water. Solution cavities in the limestones, when sufficiently large can form good aquifers.

**Table 6. The geological succession in Karnataka state**

Age	Series/System	Formation
Recent	Soil & Alluvium	Sand and Clay
Pleistocene	Laterite	Laterite
Tertiary to Mesozoic	Deccan Trap Basalt	Hard massive & vesicular Basalts
~~~~~ UNCONFORMITY ~~~~~		
Lower Paleozoic to upper Precambrian	Bhima Series	Quartzites, Sandstone, Limestone, Shale and Conglomerates
~~~~~ UNCONFORMITY ~~~~~		
Upper Precambrian	Kaladgi Series	Quartzites, Sandstones, Limestones, Shale and Conglomerates.
~~~~~ UNCONFORMITY ~~~~~		
Lower Precambrian	Dharwar system volcanics Greenstone, metasediments	Dharwar Schists meta sediments Greenstone formations
~~~~~ UNCONFORMITY ~~~~~		
Archaean	Peninsular Gneissic complex	Gneisses, Granites, Charnockites, Khondalites

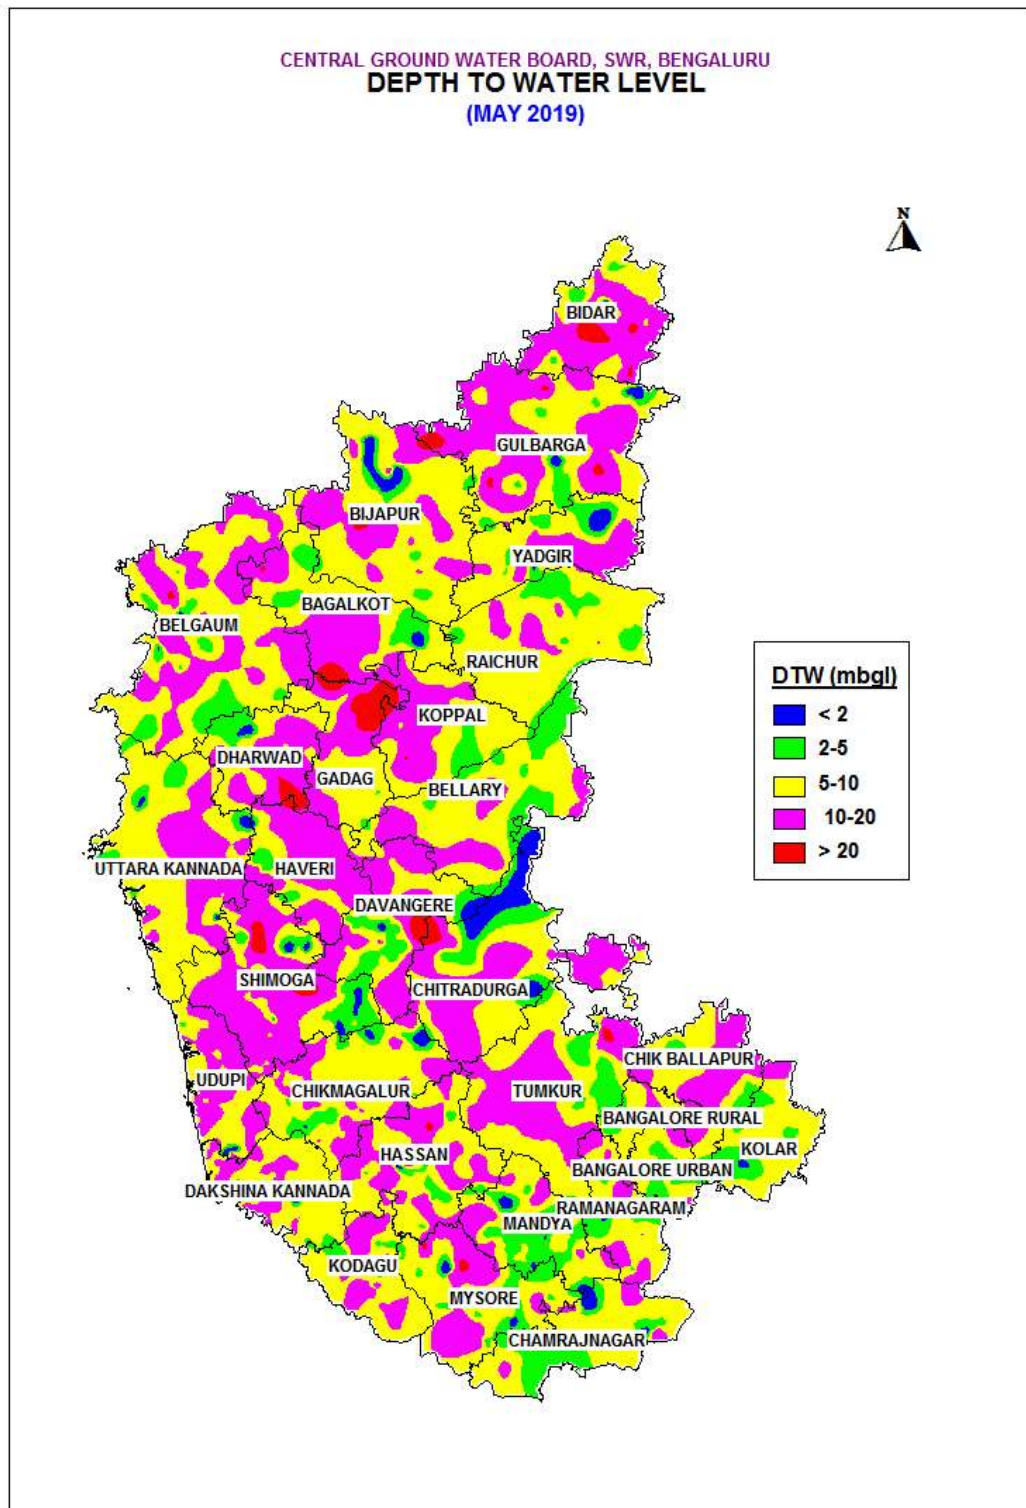

## 4.0 DEPTH TO WATER LEVEL

### 4.1 May 2019

A statement showing the distribution of Ground Water Monitoring wells along with depth to water level in phreatic aquifers in different depth ranges is presented in **Table-7. Plate-III** depicts the ground water scenario in May 2019. Salient features of the depth to water level scenario during May 2019 are given below.

1. A perusal of the water level data reveals that the depth to water level ranged from 0.43 (Mysore district) to 30.70 m bgl (Bagalkot District).
2. The salient feature of the analysis is that the depth to water level over major part of the State lies within 10 m bgl in 67% of wells analysed, while 33% of wells show depth to water level more than 10 m bgl.
3. Depth to water level of less than 2 m bgl has been recorded in 5% of wells analysed and noted as isolated pockets in Bangalore Urban, Belgaum, Chikmagalur, Dakshina Kannada, Davanagere, Gadag, Hassan, Haveri, Kodagu, Kolar, Mandya, Mysore, Raichur, Shimoga, Tumkur and Uttara Kannada districts.
4. Depth to water level in the range of 2 to 5 m bgl has been recorded in 19% of wells analysed and noted in all the districts.
5. Depth to water level in the range of 5 to 10 m bgl has been recorded in 43% of wells analysed and noted in all the districts.
6. Depth to water level in the range of 10 to 20 m bgl has been observed in 31% of wells analysed and noted in all the districts.
7. Depth to water level in the range of more than 20 m bgl has been noted in two percentage of wells analysed and noted as isolated pockets in Bagalkot, Bangalore Rural, Belgaum, Bidar, Bijapur, Dharwad, Gadag, Gulbarga, Hassan, Mysore, Shimoga and Tumkur districts.

<b>Table 7: Depth to water level (May 2019)</b>

## 4.2 August 2019

The statement showing the distribution of Ground Water Monitoring wells along with depth to water level of phreatic aquifer in different depth ranges is presented in **Table-8** and **Plate-IV** depicts the ground water scenario in August 2019. Salient features of the depth to water level scenario during August 2019 are given below.

1. A perusal of the water level data reveals that the depth to water level ranged from 0.01 m bgl (Chikmagalur, Dakshin Kannada, Gulbarga, Raichur, Shimoga, Udupi and Uttara Kannada districts) to 30.7 m bgl (Bagalkot district).
2. The salient feature of the analysis is that the depth to water level over major part of the State lies within 10 m bgl in 87% of wells analysed, while 13% of wells show depth to water level more than 10 m bgl.
3. Depth to water level of less than 2 m bgl has been recorded in 28% of wells analysed and noted all over the State.
4. Depth to water level in the range of 2 to 5 m bgl has been recorded in 34% of wells analysed and noted in all the districts.
5. Depth to water level in the range of 5 to 10 m bgl has been recorded in 25% of wells analysed and noted in all the districts.
6. Depth to water level in the range of 10 to 20 m bgl has been recorded in 12% of wells analysed and noted in Bagalkot, Bangalore Rural, Bangalore Urban, Belgaum, Bellary, Bidar, Bijapur, Chamarajanagar, Chikmagalur, Chitradurga, Davanagere, Dharwad, Gadag, Gulbarga, Hassan, Haveri, Kodagu, Koppal, Mandya, Mysore, Raichur, Tumkur and Uttara Kannada districts.
7. Depth to water level in the range of more than 20 m bgl has been recorded in noted in one percentage of wells analysed and noted as isolated pockets in Bagalkot, Bangalore Rural, Bidar, Bijapur, Dharwad, Gadag, Hassan, Kodagu, Koppal, Mysore, Raichur and Tumkur districts.

### 4.3 November 2019

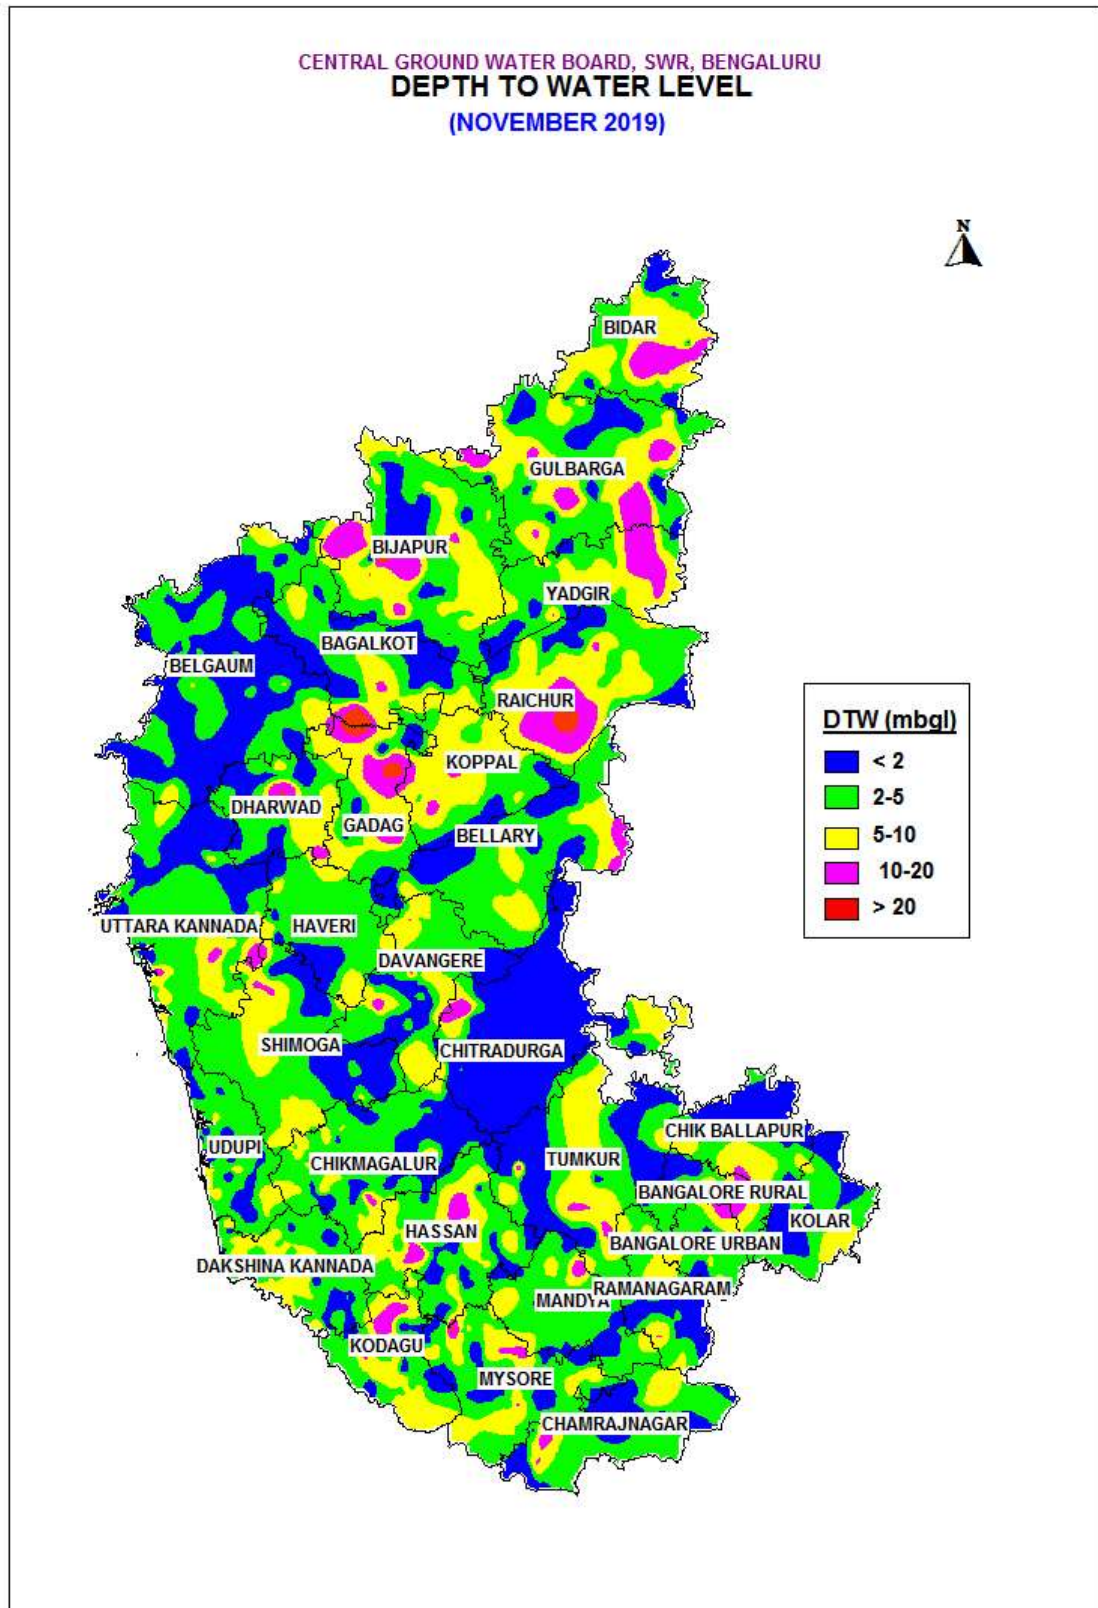

The statement showing the distribution of ground water monitoring wells along with depth to water level of phreatic aquifer in different depth ranges is presented in **Table-9** and **Plate-V** depicts the ground water scenario in November 2019. Some of the salient features are:

1. A perusal of the water level data reveals that the depth to water level ranged from 0.01 m bgl (Belgaum, Chamrajnagar, Gulbarga and Udupi district) to 30.7 m bgl (Bagalkot district).
2. The salient feature of the analysis is that the depth to water level over major part of the State lies within 10 m bgl in 93.5% of wells analysed, while six percentage of wells show depth to water level more than 10 m bgl. Depth to water level of less than 2 m bgl has been recorded in 32.5% of wells analysed and noted all over the State.
3. Depth to water level in the range of 2 to 5 m bgl has been recorded in 35% of wells analysed and noted in all the districts.
4. Depth to water level in the range of 5 to 10 m bgl has been recorded in 26% of wells analysed and noted in all the districts.
5. Depth to water level in the range of 10 to 20 mbgl has been recorded in Bagalkot, Bangalore Rural, Bangalore Urban, Bellary, Bidar, Bijapur, Chamarajanagar, Chikmagalur, Chitradurga, Davanagere, Dharwad, Gadag, Gulbarga, Hassan, Kodagu, Koppal, Mandya, Mysore, Raichur, Shimoga, Tumkur and Uttara Kannada districts.
6. Depth to water level more than 20 m bgl has been noted in 0.5 % of wells analysed and noted as isolated pockets in Bagalkot, Bijapur, Dharwad, Gadag, Mysore and Raichur districts.

**Table 9: Depth to Water Level (Nov 2019)**

#### 4.4 January 2020

The statement showing the distribution of ground Water Monitoring wells along with depth to water levels in phreatic aquifer in different depth ranges is presented in **Table-10** and **Plate-VI** depicts the ground water scenario in January 2020. Some of the salient features are:

1. A perusal of the water level data reveals that the depth to water level ranged from 0.1 m bgl (Chamrajnagar, Chikmagalur and Mysore districts) to 30.7 m bgl (Bagalkot district).
2. The salient feature of the analysis is that the depth to water level over major part of the State lies within 10 m bgl in 87.6% of wells analysed, while 12.4% of wells show depth to water level in the range of 10 to 20 m bgl.
3. Depth to water level of less than 2 m bgl has been recorded in 13.7% of wells analysed.
4. Depth to water level in the range of 2 to 5 m bgl has been recorded in 36.6% of wells analysed and noted in isolated pockets in all the districts.
5. Depth to water level in the range of 5 to 10 m bgl has been recorded in 37.3 % of wells analysed and noted in all the districts.
6. Depth to water level in the range of 10 to 20 m bgl has been recorded in 12% of wells analysed and noted as isolated pockets in all the districts.
7. Depth to water level more than 20 m bgl has been noted in 0.6% of wells analysed and noted as isolated pockets in Bagalkot, Bangalore Rural, Bidar, Bijapur, Gadag and Hassan districts.

## 5.0. FLUCTUATION OF WATER LEVEL

### 5.1 MAY 2018 & MAY 2019

Water levels from 1309 stations were analysed to know the annual change in groundwater level in May 2019 with that of May 2018. Out of 1309 stations 1196 stations were compared and remaining 113 stations could not be compared due to non-availability of data for the particular station in previous year. On the whole, 262 wells accounting for 22% of the analysed wells have recorded a rise in water level during May 2019 as compared with the water level of May 2018. The remaining 934 wells accounting for 78% have recorded a fall in water level (**Table 11**). Some of the salient features are:

1. Rise in the water level in the range of 0-2 m has been observed in 17% of wells analysed and observed in Bagalkot, Bangalore Rural, Bangalore Urban, Belgaum, Bellary, Bidar, Bijapur, Chikmagalur, Chitradurga, Dakshina Kannada, Davanagere, Gadag, Gulbarga, Hassan, Haveri, Kodagu, Kolar, Koppal, Mandya, Mysore, Raichur, Shimoga, Tumkur, Udupi and Uttara Kannada districts.
2. Rise in the water level in the range of 2-4 m has been observed in three percentage of wells analysed and noted in Bagalkot, Bangalore Rural, Bangalore Urban, Belgaum, Bellary, Bidar, Chikmagalur, Dakshin Kannada, Davanagere, Hassan, Haveri, Kodagu, Koppal, Mandya, Mysore, Shimoga, Udupi and Uttara Kannada districts.
3. Rise in water level more than 4 m has been observed in two percentage of wells analysed and noted in Bagalkot, Bangalore Urban, Bijapur, Chamarajanagar, Chikmagalur, Dakshin Kannada, Dharwad, Gulbarga, Hassan, Kodagu, Kolar, Mandya, Mysore, Raichur and Shimoga districts.
4. The fall in water level in the range of 0-2 m has been observed in 47% of wells analysed and noted in all the districts.
5. The fall in water level in the range of 2-4 m has been observed in 18% of wells analysed and noted and noted in all the districts.
6. The fall in water level more than 4 m has been observed in 13% of wells analysed and noted and noted in all the districts.

**Table-11: Water level fluctuation May 2018 & May 2019**

Sl.No	Districts	No of wells Monitored	Water level fluctuation						No of wells recorded rise	No of wells recorded fall
			Range of rise (m)			Range of fall (m)				
			0-2	2-4	>4	0-2	2-4	>4

## 5.2 AUGUST 2018 & AUGUST 2019

The statement showing the distribution of ground water monitoring wells falling in different ranges of fluctuation is presented in **Table-12**. A comparison of water level shows that a fall in the water level is recorded in 42 % of wells analysed, while 58 % recorded rise. A perusal of the data shows that a general rise in the range of 0 to 2 m is noticed in major part of the area, followed by a fall of 0 to 2 m. Some of the salient features are:

1. Rise in the water level in the range of 0 to 2 m has been observed in 45% of wells.
2. Rise in the water level in the range of 2 to 4 m has been observed in 7 % of wells analysed and noted in all districts except in Bellary.
3. Rise in water level more than 4 m has been observed in five percentage of wells analysed and noted in Belgaum, Bijapur, Chikmagalur, Chitradurga, Dakshin Kannada, Davanagere, Dharwad, Gulbarga, Hassan, Haveri, Mandya, Mysore, Shimoga and Uttara Kannada districts.
4. The fall in water level in the range of 0-2 m has been observed in 28% of wells analysed and noted in all the districts of the state.
5. The fall in water level in the range of 2-4 m has been observed in nine percentage of wells analysed and noted as isolated pockets in all the districts.
6. The fall in water level more than 4 m has been observed in five percentage of wells analysed and noted as isolated pockets in Bagalkot, Bangalore Rural, Bangalore Urban, Bellary, Bidar, Bijapur, Chamarajanagar, Chitradurga, Davanagere, Dharwad, Gulbarga, Hassan, Haveri, Kodagu, Kolar, Koppal, Mandya, Mysore, Shimoga and Tumkur districts.

### 5.3 NOVEMBER 2018 & NOVEMBER 2019

The statement showing the distribution of ground water monitoring wells falling in different ranges of fluctuation is presented in **Table-13**. A comparison of water level shows that a fall in the water level is recorded in 22% of wells analysed, while 78% recorded rise. A perusal of the data shows that a general fall in the range of 0 to 2 m is noticed in major part of the area, followed by a rise of 0 to 2 m. Some of the salient features are:

1. Rise in the water level in the range of 0-2 m has been observed in 46% of wells analysed and observed in all over the State.
2. Rise in the water level in the range of 2-4 m has been observed in 18% of wells analysed and noted in all districts except in Chamrajnagar.
3. Rise in water level more than 4 m has been observed in 14% of wells analysed. Except Bangalore Urban and Mysore all other districts have recorded more than 4 m rise.
4. The fall in water level in the range of 0-2 m has been observed in 16% of wells analysed and noted in all the districts.
5. The fall in water level in the range of 2-4 m has been observed in four percentage of wells analysed and noted as isolated pockets in Bagalkot, Bangalore Rural, Bangalore Urban, Bellary, Bidar, Bijapur, Chikmagalur, Dakshin Kannada, Davanagere, Gadag, Gulbarga, Hassan, Kodagu, Kolar, Koppal, Mandya, Mysore, Raichur, Tumkur and Udupi districts.
6. The fall in water level more than 4 m has been observed in two percentage of wells analysed and noted as isolated pockets in Bangalore Rural, Bijapur, Chikmagalur, Dharwad, Gadag, Gulbarga, Hassan, Kodagu, Mandya, Mysore, Raichur and Tumkur districts.

#### 5.4 JANUARY 2019 & JANUARY 2020

The statement showing the distribution of ground water monitoring wells falling in different ranges of fluctuation is presented in **Table-14**. A comparison of water level shows that a fall in the water level is recorded in 31% of wells analysed, while 69% recorded rise. A perusal of the analysis shows that a general rise in the range of 0 – 2 m is noticed in major part of the area. Some of the salient features are:

1. Rise in the water level in the range of 0-2 m has been observed in 48% of wells analysed and observed in all over the State.
2. Rise in the water level in the range of 2 to 4 m has been observed in 11% of wells analysed and noted in all districts.
3. Rise in water level more than 4 m has been observed in 10% of wells analysed. Except Bangalore Urban all other districts have recorded more than 4 m rise.
4. The fall in water level in the range of 0-2 m has been observed in 22% of wells analysed and noted in all the districts except Bellary.
5. The fall in water level in the range of 2-4 m has been observed in five percentage of wells analysed and noted as isolated pockets in Bangalore Rural, Belgaum, Bidar, Bijapur, Chikmagalur, Dakshin Kannada, Davanagere, Dharwad, Gadag, Gulbarga, Hassan, Kodagu, Kolar, Koppal, Mandya, Mysore, Raichur, Shimoga, Tumkur, Udupi and Uttara Kannada districts.
6. The fall in water level more than 4 m has been observed in four percentage of wells analysed and noted as isolated pockets in Bangalore Rural, Bellary, Bidar, Chamarajanagar, Dakshin Kannada, Davanagere, Dharwad, Gadag, Gulbarga, Hassan, Haveri, Kodagu, Kolar, Koppal, Mandya, Mysore, Raichur, Shimoga, Udupi and Uttara Kannada districts.

## 5.5 MAY 2019 & NOVEMBER 2019

The statement showing the distribution of ground water monitoring wells falling in different ranges of fluctuation is presented in **Table-15**. A comparison of water level shows that a fall in the water level is recorded in 3% of wells analysed, while 97% recorded rise. Some of the salient features are:

1. Rise in the water level in the range of 0 to 2 m has been observed in 17 % of wells analysed and noticed in all the districts.
2. Rise in the water level in the range of 2 to 4 m has been observed in 25% of wells analysed and noted in all the districts.
3. Rise in water level more than 4 m has been observed in 55% of wells analysed and noted in all the districts.
4. The fall in water level in the range of 0 to 2 m has been observed in two percentage of wells analysed and noticed as isolated pockets in Bangalore Rural, Bangalore Urban, Chikmagalur, Gadag, Gulbarga, Kodagu, Kolar, Mandya, Mysore, Raichur, Shimoga, Tumkur and Uttara Kannada districts.
5. The fall in water level in the range more than 2 m has been observed in one percentage of wells analysed and noted as isolated pockets in Bangalore Urban, Bellary, Chamarajanagar, Chikmagalur, Dharwad, Gadag, Hassan, Kodagu, Kolar, Mandya, Mysore, Raichur and Shimoga districts.

## 5.6 MAY 2019 & JANUARY 2020

The water level fluctuation denotes the cumulative effect of southwest and northeast monsoons and ground water development during the period. Rise denotes adequate compensation of the ground water development and fall denotes inadequacy of recharge.

The statement showing the distribution of ground water monitoring wells falling in different ranges of fluctuation is presented in **Table-16**. A comparison of water level shows that a rise in the water level is recorded in 88% of wells analysed, while 12% recorded fall.

1. Rise in the water level in the range of 0-2 m has been observed in 35% of wells analysed and noticed in all the districts.
2. Rise in the water level in the range of 2-4 m has been observed in 28% of wells analysed and noted in all the districts.
3. Rise in water level more than 4 m has been observed in 25% of wells analysed and noted in all the districts except in Bangalore Urban.
4. The fall in water level in the range of 0-2 m has been observed in nine percentage of wells analysed and noticed as isolated pockets in Bagalkot, Bangalore Rural, Bangalore Urban, Belgaum, Bijapur, Chamarajanagar, Chikmagalur, Dakshin Kannada, Davanagere, Gadag, Gulbarga, Hassan, Haveri, Kodagu, Koppal, Mandya, Mysore, Raichur, Shimoga, Tumkur, Udupi and Uttara Kannada districts.
5. The fall in water level in the range more than 2 m has been observed in three percentage of wells analysed and noted as isolated pockets in Bangalore Rural, Bellary, Bidar, Bijapur, Chikmagalur, Dakshin Kannada, Davanagere, Dharwad, Gadag, Kodagu, Kolar, Mandya, Mysore, Raichur, Shimoga and Udupi districts.

**Table 16: District wise categorisation of water level fluctuation (May 2019 & Jan 2020)**

## **5.7 FLUCTUATION BETWEEN DECADAL MEAN WATER LEVEL & WATER LEVEL**

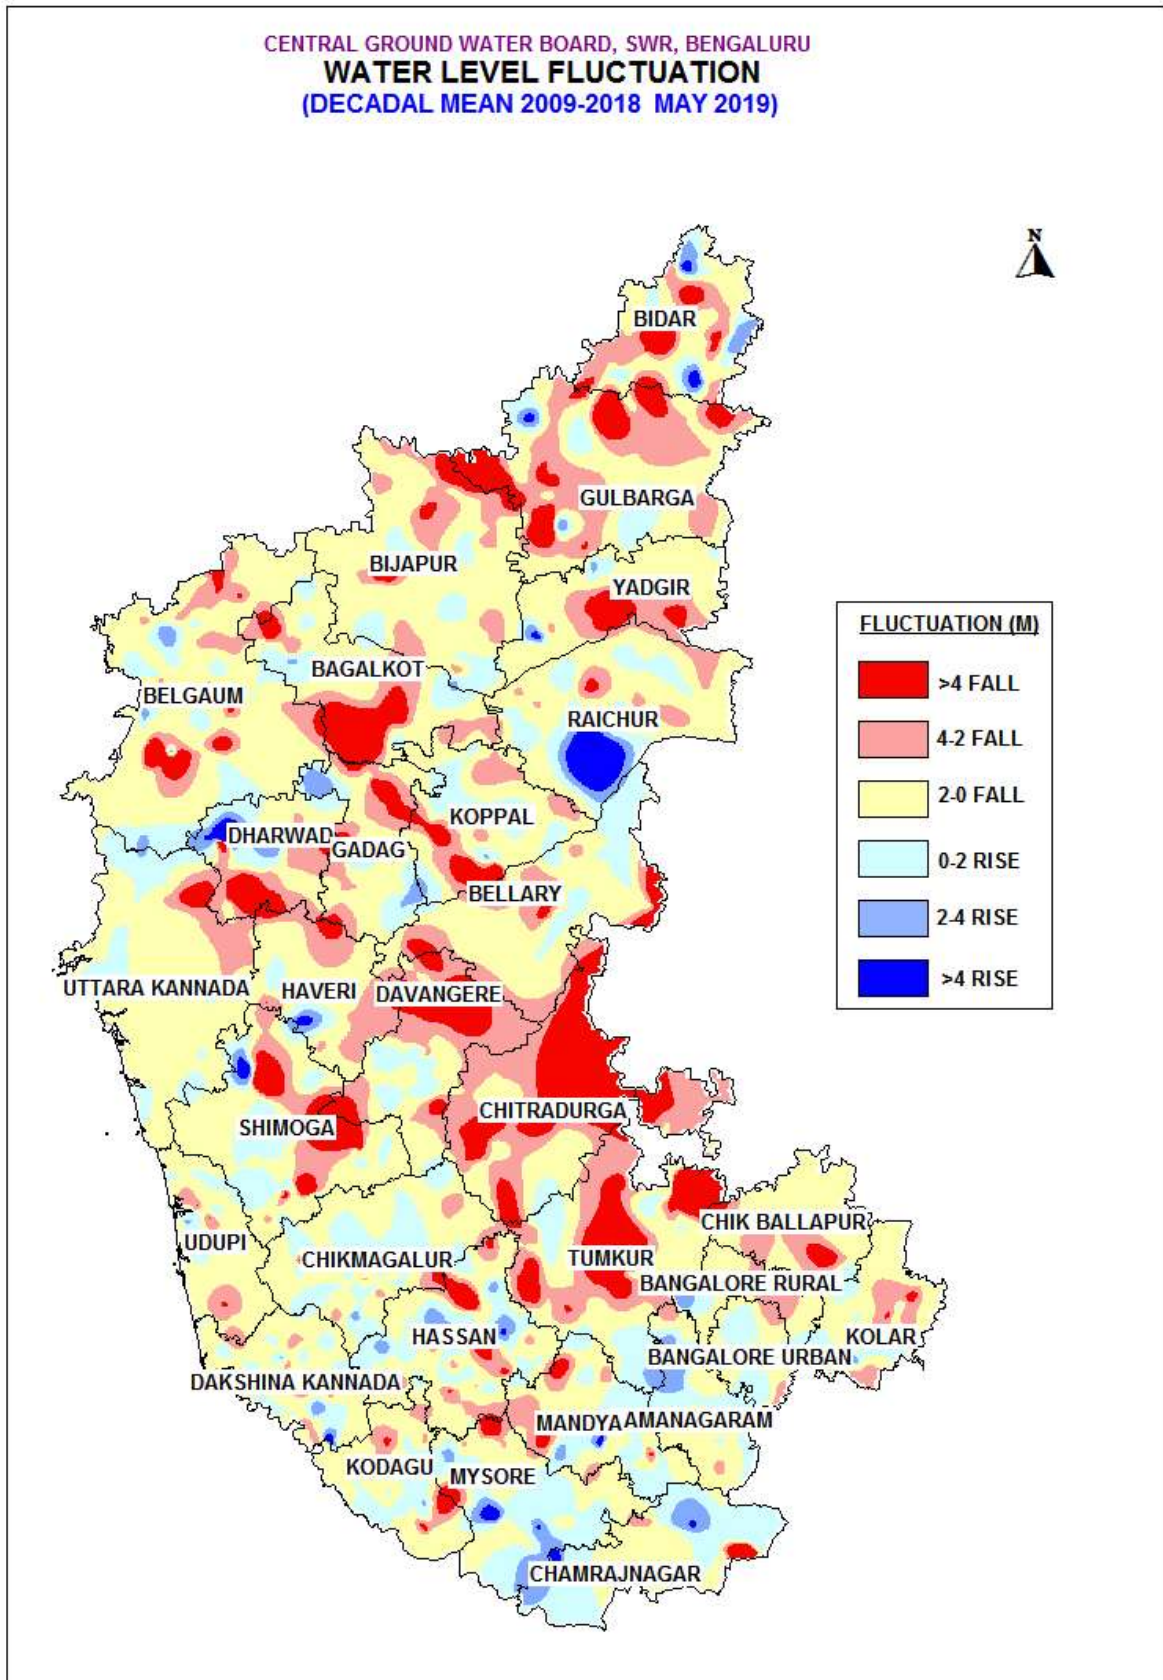

The fluctuation of water level recorded during the particular period with respect to decadal mean indicate the impact of ground water development and ground water recharge during the decade. Positive fluctuation indicates improved recharge over and above ground water development and negative fluctuation indicate increased ground water development over and above the recharge.

### **5.7.1 Mean Water Levels for the Period May 2009-2018 & May 2019:**

The water level data for May 2018 were compared with mean water level for the period May 2009-2018. The district-wise distribution of Ground water monitoring wells falling in different ranges of water level fluctuation is presented in **Table-17** and **Plate-VII**. A comparison of water level shows a rise in 31% and a fall in 69 % of the wells.

1. Rise in the water level in the range of 0 to 2 m has been observed in 25% of wells analysed and noticed in all the districts.
2. Rise in the water level in the range of 2 to 4 m has been observed in four percentage of wells analysed and noted as isolated pockets in Bagalkot, Bangalore Rural, Bangalore Urban, Belgaum, Bellary, Bidar, Bijapur, Chamarajanagar, Dakshin Kannada, Davanagere, Gadag, Gulbarga, Hassan, Kodagu, Kolar, Koppal, Mandya, Mysore, Raichur, Shimoga, Udupi and Uttara Kannada districts.
3. Rise in water level more then 4 m has been observed in two percentage of wells analysed and noted as isolated pockets in Bangalore Urban, Belgaum, Bellary, Bidar, Chamarajanagar, Chikmagalur, Dakshin Kannada, Dharwad, Gadag, Gulbarga, Hassan, Haveri, Kodagu, Kolar, Mandya, Mysore, Raichur, Shimoga and Udupi districts.
4. The fall in water level in the range of 0 to 2 m has been observed in 45% of wells analysed and noticed in all the districts.
5. The fall in water level in the range of 2 to 4 m has been observed in 14% of wells analysed and noted in all the districts.
6. The fall in water level in the range of more than 4 m has been observed in 10% of wells analysed and noted in all the districts except in Bangalore Urban district.

### 5.7.2 Mean Water Levels for The Period August 2009-2018 & August 2019:

The statement showing the distribution of ground water monitoring wells falling in different ranges of fluctuation is presented in **Table-18** and **Plate-VIII**. A comparison of water level shows that a rise in the water level is recorded in 62 % of wells analysed, while 38 % recorded fall. Salient features of the comparison of water levels are given below.

1. Rise in the water level in the range of 0 to 2 m has been observed in 42% of wells analysed and noted all over the State.
2. Rise in the water level in the range of 2 to 4 m has been observed in 14% and of wells analysed and noted in all the districts except in Chitradurga and Raichur districts.
3. Rise in the water level more than 4 m has been observed in 6 % of wells analysed and noted as isolated pockets in Bangalore Rural, Belgaum, Bidar, Bijapur, Chamarajanagar, Chikmagalur, Chitradurga, Dakshin Kannada, Davanagere, Dharwad, Gadag, Hassan, Haveri, Kodagu, Kolar, Mandya, Mysore, Shimoga and Uttara Kannada districts.
4. The fall in water level in the range of 0 to 2 m has been observed in 22% of wells analysed and noted in all the districts.
5. The fall in water level in the range of 2 to 4 m has been observed in 10% of wells analysed and noted as isolated pockets in Bagalkot, Bangalore Rural, Belgaum, Bellary, Bidar, Bijapur, Chamarajanagar, Chikmagalur, Chitradurga, Dakshin Kannada, Davanagere, Gadag, Gulbarga, Hassan, Haveri, Kodagu, Kolar, Koppal, Mandya, Mysore, Raichur, Shimoga, Tumkur and Udupi districts.
6. The fall in water level more than 4 m has been observed in six percent of wells analysed and noted as isolated pockets in Bagalkot, Bangalore Rural, Bangalore Urban, Bellary, Bidar, Bijapur, Chamarajanagar, Chikmagalur, Chitradurga, Davanagere, Dharwad, Gadag, Gulbarga, Hassan, Haveri, Kodagu, Kolar, Koppal, Mandya, Mysore, Raichur and Tumkur districts.

### 5.7.3 Mean Water Levels for The Period November 2009-2018 & November 2019:

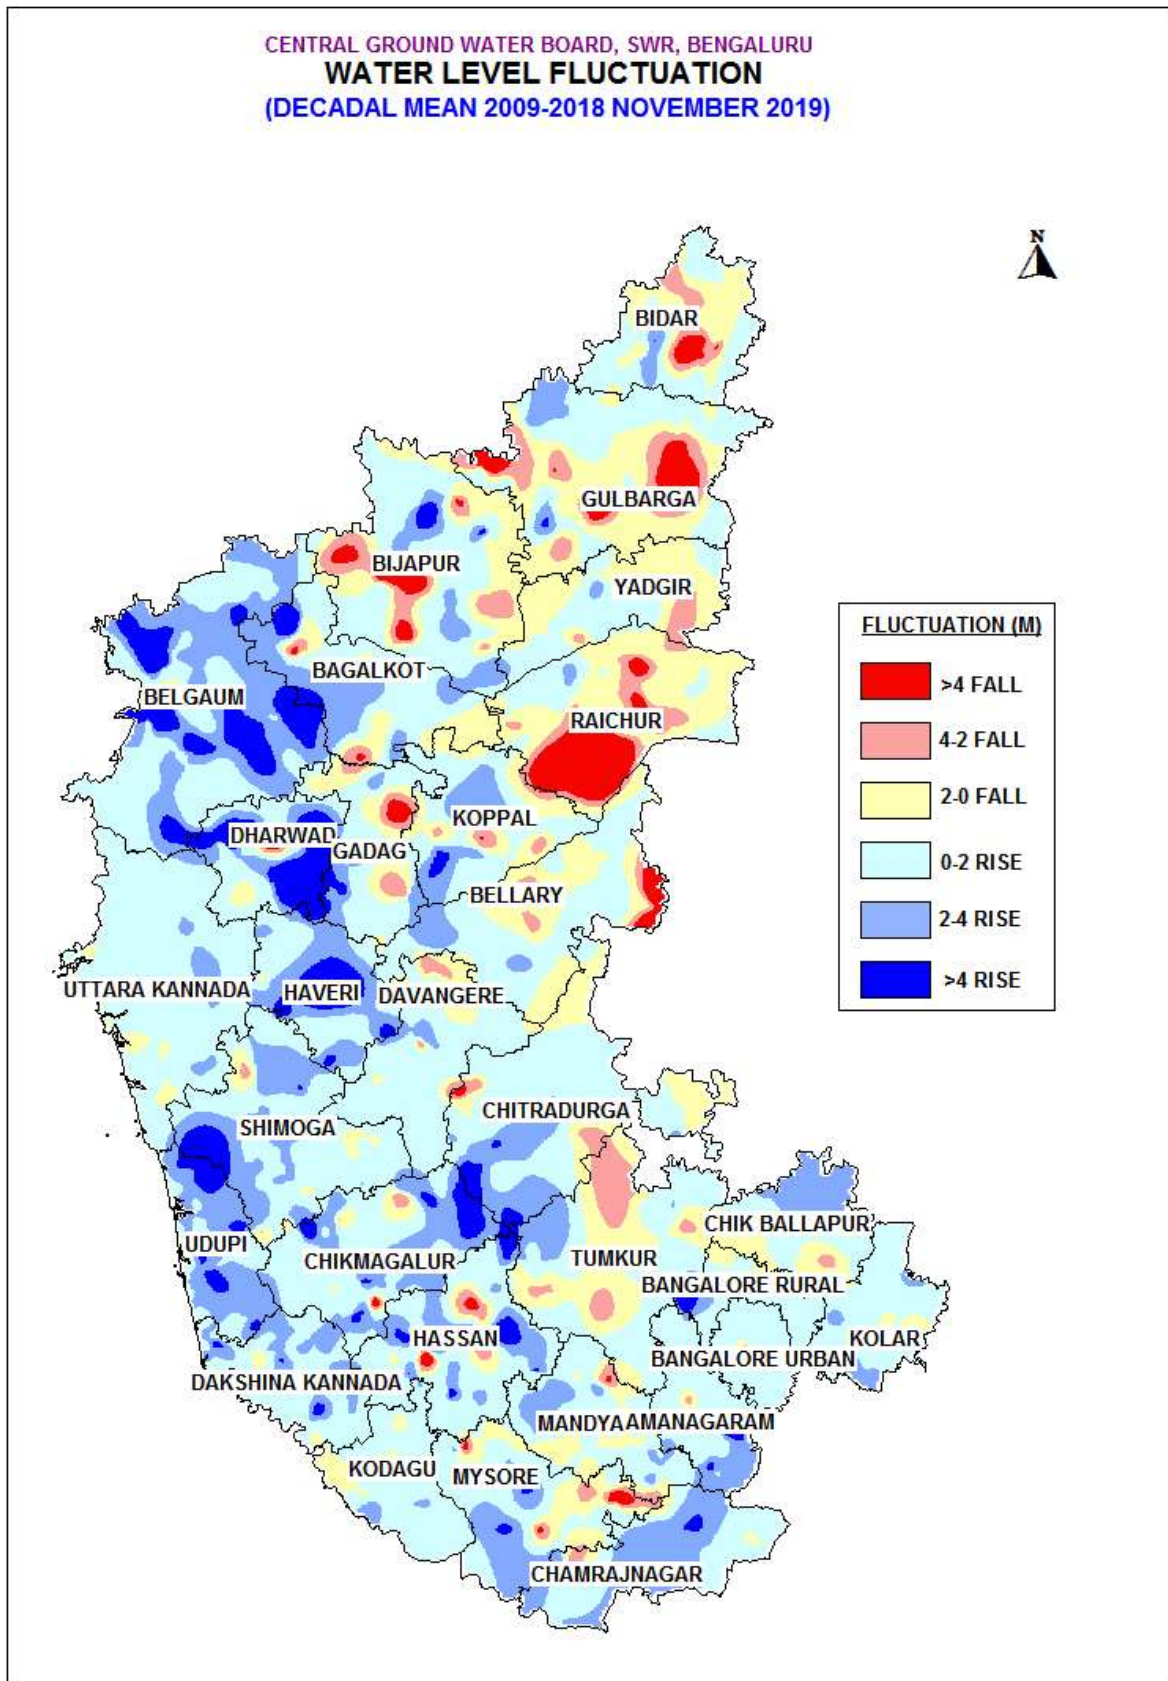

The statement showing the distribution of ground water monitoring wells falling in different ranges of fluctuation is presented in **Table-19** and **Plate-IX**. A comparison of water level shows that a fall in the water level is recorded in 5 % of wells analysed, while 95 % recorded rise. Salient features of the comparison of water levels are given below.

1. Rise in the water level in the range of 0 to 2 m has been observed in 22 % of wells analysed, noted all over the State.
2. Rise in the water level more than 2 to 4 m has been observed in 26 % of wells analysed and noted in all the districts.
3. Rise in the water level more than 4 m has been observed in 47 % of wells analysed and noted in all the districts.
4. The fall in water level in the range of 0 to 2 m has been observed in 3.5% of wells analysed and noted as isolated pockets in Bangalore Rural, Bangalore Urban, Chikmagalur, Dakshin Kannada, Davanagere, Gadag, Gulbarga, Hassan, Kolar, Koppal, Mandya, Mysore, Raichur, Shimoga, Tumkur and Uttara Kannada districts.
5. The fall in water level in the range of 2 to 4 m has been observed in 1% of wells analysed and noted as isolated pockets in Bangalore Rural, Bellary, Chikmagalur, Gadag, Hassan, Koppal, Mandya and Raichur districts.
6. The fall in water level more than 4 m has been observed in 0.5 percentage of wells analysed and noted as isolated pockets in Bangalore Urban, Chamarajanagar Dharwad, Mysore, Raichur and Shimoga districts.

**Table-19 District wise categorisation of water level fluctuation

#### **5.7.4 Mean Water Levels for The Period January 2010-2019 & January 2020:**

The distribution of hydrograph network stations falling in different ranges of fluctuation is presented in **Table-20 and Plate X**. A comparison of water levels shows that a rise in the water level is recorded in 60% of wells analysed, while 40 % recorded fall.

1. Rise in the water level in the range of 0 to 2m has been observed in 45% of wells analysed, noted all over the State.
2. Rise in the water level 2 to 4 m has been observed in 10% and of wells analysed and noted in all the districts except in Bangalore Rural.
3. The rise in water level in the range of more than 4 m has been observed in 5 % of wells analysed and noted as isolated pockets in Bangalore Rural, Belgaum, Bijapur, Chamarajanagar, Chikmagalur, Chitradurga, Dakshin Kannada, Davanagere, Dharwad, Gadag, Gulbarga, Hassan, Haveri, Kodagu, Mandya, Mysore, Raichur, Tumkur and Udupi districts.
4. The fall in water level in the range of 0 to 2 m has been observed in 29% of wells analysed and noted in all the districts.
5. The fall in water level 2 to 4 m has been observed in 7 % of wells analysed and noted as isolated pockets in Bagalkot, Belgaum, Bellary, Bidar, Bijapur, Chamarajanagar, Chikmagalur, Chitradurga, Dakshin Kannada, Davanagere, Gulbarga, Hassan, Kodagu, Kolar, Koppal, Mandya, Mysore, Raichur, Shimoga, Tumkur, Udupi and Uttara Kannada districts.
6. The fall in water level 2 to 4 m has been observed in 4 % of wells analysed and noted as isolated pockets in Bagalkot, Bangalore Rural, Bellary, Bidar, Bijapur, Chamarajanagar, Chitradurga, Dakshin Kannada, Davanagere, Dharwad, Gadag, Gulbarga, Hassan, Haveri, Kodagu, Kolar, Koppal, Mandya, Mysore, Raichur, Shimoga, Tumkur and Udupi districts.

## 6.0 HYDROCHEMISTRY

The quality of shallow ground water in Karnataka state has been evaluated by sampling and analysis of water sample collected from Ground Water Monitoring wells. About 1066 Ground Water Monitoring wells were monitored for water quality during May 2018 representing pre-monsoon water quality. The district wise chemical analysis data of the samples are given in the Annexure-V. The summarized results of ground water quality ranges are given in **Table 21**.

**Table 21: Ground water quality of SWR, during May-2018**

Sl. No	Parameters	Type	Range	No. of sample	%
1	Electrical Conductivity $\mu\text{s}/\text{cm}$ at 25°C	Fresh	< 750	401	38.0
		Moderate	751- 2250	548	51.0
		Slightly mineralized	2251- 3000	53	5.0
		Highly mineralized	> 3000	64	6.0
2	Chloride mg/l	Desirable limit	< 250	887	83.0
		Permissible limit	251-1000	164	15.0
		Beyond permissible limit	> 1000	15	2.0
3	Fluoride mg/l	Desirable limit	< 1.0	858	81.0
		Permissible limit	1.1- 1.5	129	12.0
		Beyond permissible limit	>1.5	79	7.0
4	Nitrate mg/l	Permissible limit	<45	720	68.0
		Beyond permissible limit	> 45	346	32.0

Distribution of electrical conductivity is shown in **Plate- XI**. In general, the ground water quality in the state is fresh in about 38 % of the Ground Water Monitoring wells as indicated by the EC value less than 750  $\mu\text{s}/\text{cm}$  at 25°C. In about 51 % of the Ground Water Monitoring wells, the EC varies between 751 -2250  $\mu\text{s}/\text{cm}$  at 25° C and in 5 % of Ground Water Monitoring wells are between 2251-3000  $\mu\text{s}/\text{cm}$  at 25° C indicating that the ground water is slightly mineralized and about 6 % of Ground Water Monitoring wells the EC is more than 3000  $\mu\text{s}/\text{cm}$  at 25°C indicating that the ground water is highly mineralized. The highest value 16000  $\mu\text{s}/\text{cm}$  at 25° C was observed in Ullal Beach, Dakshina Kannada district. The details of well showing EC more than 3000  $\mu\text{s}/\text{cm}$  at 25° C is given in **Table 22**.

**Table 22: Details of well shows Electrical conductivity more than 3000  $\mu\text{s}/\text{cm}$  at 25° C during May 2018**

Distribution of Chloride is shown in **Plate XII**. The chloride content is less than 250 mg/l in about 83 % of the sample analyzed and 15 % of the sample are between 251 to 1000 mg/l and 2 % shows more than 1000 mg/l which are from the districts of Belgaum, Bijapur, Dakshina Kannada, Davanagere, Dharwad, Gadag, Raichur, Udupi and Yadgir. The details of wells showing chloride more than 1000 mg/l are given in **Table 23**.

**Table 23: List of well shows chloride more than permissible limit of 1000 mg/l during May 2018**

Sl. No	Location	District	Chloride (mg/l)

CENTRAL GROUND WATER BOARD, SWR, BANGALORE  
**DISTRIBUTION OF CHLORIDE**  
(MAY 2018)

CENTRAL GROUND WATER BOARD, SWR, BANGALORE  
DISTRIBUTION OF FLUORIDE

(MAY 2018)

## 7.0. CONCLUSIONS

The behaviour of ground water table during May 2019 to January 2020 in Karnataka has been studied by monitoring the dug wells tapping phreatic aquifers. The data on water levels were analysed in detail and salient features are as under.

1. 67% of wells have recorded depth to water level within 10 m bgl during premonsoon period (May 2019), whereas during post-monsoon period (November 2019), about 93.5% of wells recorded water levels less than 10 m bgl.
2. 87% of wells have recorded depth to water level within 10m bgl during August 2019 and 87.3% during January 2020.
3. 97% of wells have recorded rise in water levels and 3 % of wells have recorded fall in water levels during November 2019 (post monsoon) in comparison to May 2019 (pre-monsoon). Rise in water level is due to Excess/Normal rainfall received in many districts during south west monsoon.
4. 31% of wells have recorded rise in water levels and 61% of wells recorded fall in water levels during May 2019 in comparison to decadal mean.
5. 95% of wells have recorded rise in water levels during November 2019 with respect to respective decadal means.
6. 5 % of wells have recorded fall in water levels during November 2018 with respect to respective decadal means.
7. In general, the ground water quality in the state is fresh in about 38 % of the Ground Water Monitoring wells as indicated by the EC value less than 750  $\mu\text{s}/\text{cm}$  at 25°C. In about 51 % of the Ground Water Monitoring wells, the EC varies between 751 -2250  $\mu\text{s}/\text{cm}$  at 25° C and 5 % of Ground Water Monitoring wells are between 2251-3000  $\mu\text{s}/\text{cm}$  at 25° C indicating that the ground water is slightly mineralized and about 6 % of Ground Water Monitoring wells the EC is more than 3000  $\mu\text{s}/\text{cm}$  at 25°C indicating that the ground water is highly mineralized. The highest value 16000  $\mu\text{s}/\text{cm}$  at 25°C was observed in Ullal Beach, Dakshina Kannada district.

8. The Chloride content is less than 250 mg/l in about 83 % of the sample analyzed and 15% of the sample are between 251 – 1000 mg/l and two percentage shows more than 1000 mg/l.
9. The Fluoride content is less than 1.5 mg/l in about 93 % of the sample analyzed and about 7% of the sample shows more than 1.5 mg/l which are from the districts of Bagalkot, Belgaum, Bellary, Chikballapur, Davanagere, Gadag, Gulbarga, Hassan, Haveri, Kolar, Koppal, Mandya, Mysore, Raichur, Shimoga, Tumkur and Yadgir.
10. The Nitrate content is less than 45 mg/l in about 68 % of the sample analyzed and and 32 % of sample shows more than 45 mg/l which are from the district of Bagalkot, Bangalore Rural, Bangalore Urban, Belgaum, Bellary, Bidar, Bijapur,Chamarajanagar, Chickmagalur, Chitradurga, Dakshina kannada, Dharwad, Gadag, Gulbarga, Hassan, Haveri, Kodagu, Kolar, Koppal, Mandya, Mysore, Raichur, Ramnagara, Shimoga, Tumkur and Yadgir.

## **ACKNOWLEDGEMENTS**

The authors express their gratitude to Shri V. Kunhambu, Regional Director Central Ground Water Board, South Western Region, Bengaluru, for his constant encouragement throughout the task of compilation and analysis of voluminous data. The authors also profusely thank the hard and arduous work put in by various field officers who diligently collected data and water samples from the field, which forms the base for this report. The authors profoundly thank the huge contribution made by the Officers and staff of the Water Quality Laboratory who have analysed the large number of water samples and interpreted the analysis results thereof. The authors would be failing in their duty if they do not acknowledge the unstinting cooperation offered by their various colleagues who have contributed in a major way in bringing out this report.

**Annexure I: Depth to water level (May 2019)**
