August 2023

*STATE*

Government of India initiative to provide safe and adequate drinking water supply to every households in rural India by 2024 and implement source sustainability measures such as recharge and reuse through grey water management, water conservation, rain water harvesting, etc. Water level plays important role for effective estimation of ground water resources. Ground Water Year Book for the year 2022-23 has been prepared based on data collected during pre-monsoon (May), in-between monsoon (August), post-monsoon (November) and post irrigation (January). Ground water quality data of samples collected during pre-monsoon 2022 is also shared in Ground Water Year Book. Presently, water level is being monitored manually. However, Digital Water Level Recorders with telemetry on 304 existing piezometer is being installed under National Hydrology Project.

Annual Report on Water Quality is prepared separately based on the water level data collected from field and analysed in NABL accredited Regional Chemical Laboratory, Jaipur.

Water level data were processed with the help of dedicated GEMS software, which is used for analysis, validation, and retrieval of data and generation of the maps. Based on the data analysis, Ground Water Year Book 2022-23 has been compiled & edited by Shri Suresh Kumar Pareek, Scientist "D", Shri Lokendra Kumar, Draftsman. The efforts made by the officers/officials in bringing out this report are highly appreciated.

I hope Ground Water Year Book will be of immense help for generation of various maps in carrying out NAQUIM 2.0, Ground Water Resource Assessment and preparation of Ground Water Management Plan for various user agencies as well as stakeholders. These data will also helpful to the planners, technocrats, researchers, academic institutes, etc. for the formulation of various ground water-based schemes in the Rajasthan State.

## GROUND WATER YEAR BOOK 2022, RAJASTHAN

### Table of Contents

EXECUTIVE SUMMARY.....	i
1. INTRODUCTION .....	1
2. PHYSIOGRAPHIC FEATURES .....	4
2.1 Topography .....	4
2.1.1 Aravalli Hill Ranges.....	5
2.1.2 The Eastern Plains.....	5
2.1.3 The Western Sandy Plains and Sand Dunes .....	5
2.1.4 Vindhyan Scarpland and Deccan Lava Plateau.....	6
2.2 Drainage .....	6
3. CLIMATE AND RAINFALL .....	6
3.1 Climate .....	6
3.2 Rainfall .....	7
3.3 Temperature.....	9
4. GEOLOGY .....	9
4.1 Archaeans .....	10
4.2 Proterozoics .....	11
4.3 Palaeozoic.....	11
4.4 Mesozoic .....	11
4.5 Deccan Traps.....	11
4.6 Tertiary's .....	11
4.7 Recent.....	11
5. HYDROGEOLOGY.....	12
5.1 Porous Formations .....	13
5.2 Fissured Formations .....	13
6. GROUND WATER REGIME MONITORING .....	14
6.1 Distribution of the National Hydrograph Stations .....	15
6.2 Analysis of Data.....	17
7. GROUND WATER SCENARIO.....	17
7.1 Depth to Water Level (Unconfined Aquifer).....	18
7.1.1 May 2022.....	19
7.1.2 August 2022.....	21
7.1.3 November 2022.....	23
7.1.4 January 2023 .....	25
7.2 Seasonal Water Level Fluctuation.....	27
7.2.1 May 2022 to August 2022 .....	29
7.2.2 May 2022 to November 2022 .....	30
7.2.3 May 2022 to January 2023 .....	32
7.3 Annual Water Level Fluctuation .....	34

7.3.1	May 2021 to May 2022.....	36
7.3.2	August 2021 to August 2022.....	38
7.3.3	November 2021 to November 2022.....	40
7.3.4	January 2022 to January 2023.....	41
7.4	Decadal Variations.....	43
7.4.1	Decadal average of May (2012 - 2021) to May 2022 .....	45
7.4.2	Decadal average of August (2012 - 2021) to August 2022 .....	46
7.4.3	Decadal average of November (2012 - 2021) to November 2022 .....	48
7.4.4	Decadal average of January (2013 - 2022) to January 2023.....	50
8.	Conclusions and Recommendations .....	52

## EXECUTIVE SUMMARY

The State of Rajasthan comprising of 33 districts has a geographical area of 3,42,239 square kilometre (sq km). It is situated between north latitudes 23°03' and 30°12' and east longitudes 69°30' and 78°17'.

Physiographically the state is divided into four major units, i.e., Aravalli hill ranges, Eastern plains, Western Sandy Plain and Sand Dunes & Vindhyan Scarpland and Deccan Lava Plateau.

The Aravalli Hill Ranges from the main water divide in Rajasthan. Luni is the only river west of Aravallis. In the remaining area of western Rajasthan comprising about 60% of the geographical area of the state, the drainage is internal, and the streams are lost in the desert sands after flowing for a short distance from the point of origin. In the east of Aravalli ranges, the main rivers are Chambal, Banganga, Banas, Sahibi, Kantli, Banas and Mahi.

Rajasthan receives much lower rainfall compared to the other parts of the country. Out of the total rainfall, a sizable portion is in the beginning of the rainy season which is mainly used for building the soil moisture and is also lost to evaporation because of the arid conditions. The amount infiltrating through the soil mass to contribute to ground water storage is of the order of 5% to 7% in areas underlain by hard rocks and 10% to 15% in alluvial areas.

The normal annual rainfall of Rajasthan is 549 mm. However, during the period from 2012-21, highest average annual rainfall of the State occurred in the year 2011 and lowest in the year 2017. The average annual rainfall (2022) is 29.5% more than the normal annual rainfall. The average annual rainfall of the State during the period 2022 works out to be 643.9 mm.

Diverse rock types ranging from the oldest Archaean Metamorphics to Sub-Recent to Recent alluvium and wind-blown sand are exposed in Rajasthan. However, in a major portion of the area, particularly in Western Rajasthan, the older rocks lie concealed below a cover of alluvium and blown sand. The State is underlain by hard rock (nearly 40%) consisting of the Archaean crystalline (Bhilwara Super Group), Proterozoic rocks comprising Aravalli and Delhi Super Groups, Erinpura Granite, Malani volcanics and plutonic suite of rocks and their equivalents, Marwars, Vindhyan and Deccan Traps. The soft rocks include the alluvium and the blown sand, which occupy the major portion in the remaining part of the State.

For broadly grouping geological formations from ground water occurrence & movement considerations, the various lithological units can be classified into two groups on the basis

of their degree of consolidation: the porous formations and the fissured formations. The porous formations mainly comprise the Quaternary sediments including younger & older alluvium and Tertiary & Mesozoic formations, which include siltstone, clay stone, sandstone, shale, conglomerate & limestone. The Fissured formations, as hydrogeological unit, occupy 32% area of the state and can be broadly classified into four units: Consolidated sedimentary rocks, Igneous and metamorphic rocks of lower Proterozoic age, volcanic rocks including Deccan Trap Lava Flows and Carbonate rocks including limestone, marble and dolomite.

Central Ground Water Board has a network of 1,266 stations in Rajasthan called the National Hydrograph Stations (NHS). This includes 709 dug wells and 556 purpose built piezometers. The density of stations monitored during 2021-22 works out to one station for every 271 sq. km

Water levels at these NHS are monitored four times a year. Water samples for ground water quality (inorganic constituents) are collected once in a year during May, when the concentration of the chemical constituents is expected to be at the peak level.

During all the four measurements of water levels i.e. May, August and November, 2022 and January 2023, the depth to ground water was within 20 m in more than 60% of the stations. The summarized details are as follows:

Period	No. of wells	< 2m	2 to 5m	5 to 10m	10 to 20m	20 to 40m	>40m
May -22	945	1.80	10.37	22.86	26.56	19.26	19.15
August -22	979	15.42	17.98	15.73	17.26	15.63	17.98
November -	964	7.88	24.69	16.49	18.15	14.83	17.95
January-23	964	5.60	18.36	21.58	20.23	16.08	18.26

Analysis of depth to water level during pre-monsoon indicates depth to water level of more than 40 m bgl mostly in the districts of Jhunjhunu, Sikar, Nagaur, Jaipur, Bikaner, Jalore & Barmer districts representing north-east to western and upper central part of the state. Depth to water level between 20 to 40m bgl represents north east to western part of the State. South-eastern half of the State exhibits water level less than 20 m bgl. Shallow water levels, less than 2 m bgl, are scattered mostly in the south-eastern parts of the State. About 73% stations depicts water level between 5 & 40 m bgl. The deepest water level 124.5 m bgl was recorded at Borunda in Jodhpur district.

During post monsoon, water levels of more than 40 m bgl have been observed mostly in north-east, central and western part of the state. Depth to water level between 20 to 40m bgl was observed in north-east to western parts of the State, falling mainly in parts of Alwar, Churu, Dausa, Sikar, Jhunjhunu, Bikaner, Jodhpur, Nagaur, Jaisalmer,

*Hanumangarh & Barmer districts. Water levels less than 20 m bgl are mainly seen in northern and south-eastern parts of the State. Shallow water level i.e. less than 2m bgl was spread over south, south east, northern part of State falling in Pratapgarh, Ajmer, Banswara, Baran, Kota, Rajsamand, Sirohi, Pali, Jhalawar, Udaipur, Dungarpur, Tonk, Dholpur, Chittorgarh, Bhilwara & Sawai Madhopur districts.*

*The seasonal fluctuations between May 2022 and other periods of measurement, i.e., August & November 2022 and January 2023 are shown below. In majority of the cases, a rise as compared to May 2022 is observed, except during January 2023.*

May 2022 as compared to	No. of wells analysed	Rise (% of wells)			Fall (% of wells)		
		0-2	2-4	>4	0-2	2-4	>4
Range->							
Aug 2022	888	40.43	18.36	27.70	10.47	1.69	0.79
Nov 2022	873	33.56	19.01	27.03	14.09	2.98	2.29
Jan 2023	885	29.8	17.9	22.0	21.8	4.7	2.6

*A comparison of annual fluctuation (rise & fall) in water level for each measurement, as compared to the same period (month) of previous year was made, which shows rise in water level in all the periods except during pre-monsoon period. The results are summarised below:*

From	To	No. of wells	Rise			Fall		
			0-2	2-4	>4	0-2	2-4	>4
Range->								
May 2021	May 2022	884	28.62	10.75	7.92	32.01	8.71	9.50
Aug 2021	Aug 2022	894	34.00	13.31	15.55	24.72	4.92	5.70
Nov 2021	Nov 2022	906	34.88	12.91	11.59	27.04	6.29	5.30
Jan 2022	Jan 2023	908	27.9	10.9	8.8	35.4	8.9	6.9

*In order to understand the behaviour of water level on long-term basis, a comparison of water level for each measurement period was made with the decadal (10 year) average of water levels for the same period. On long term basis, it is observed that, pre-monsoon water level shown decline whereas other periods shown rise in water levels. However, spatially, the decline is observed mainly in the north eastern, south-western and central parts. The rise in water levels during the decade is mostly observed in the northern, north western and south-eastern parts.*

## GROUND WATER YEAR BOOK 2022-23

### RAJASTHAN

#### 1. INTRODUCTION

The State of Rajasthan comprising of 33 districts has a geographical area of 3,42,239 square kilometre (sq km) and is the largest State in the country. Administrative division map of Rajasthan is shown in Figure-1. It is situated between north latitudes  $23^{\circ}03'$  and  $30^{\circ}12'$  and east longitudes  $69^{\circ}30'$  and  $78^{\circ}17'$ . The ground water monitoring is being carried out through a network of observation wells- the National Hydrograph Network Stations (NHS).

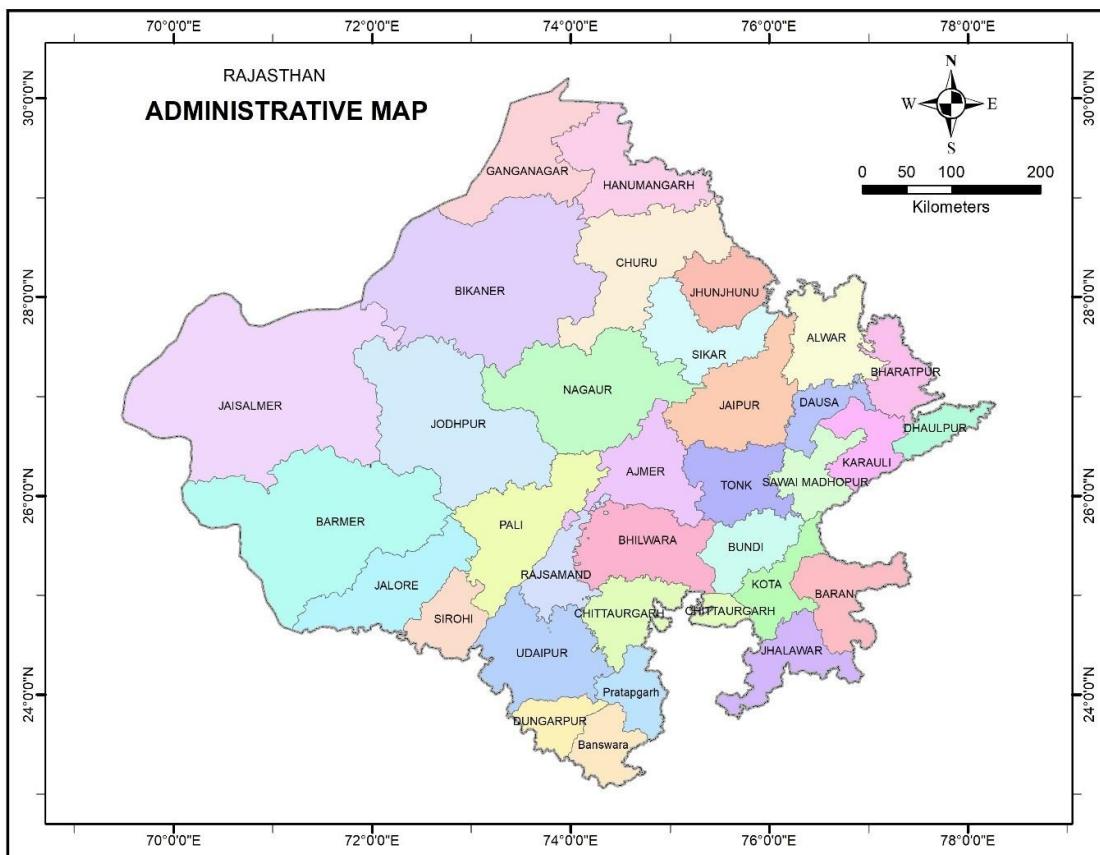

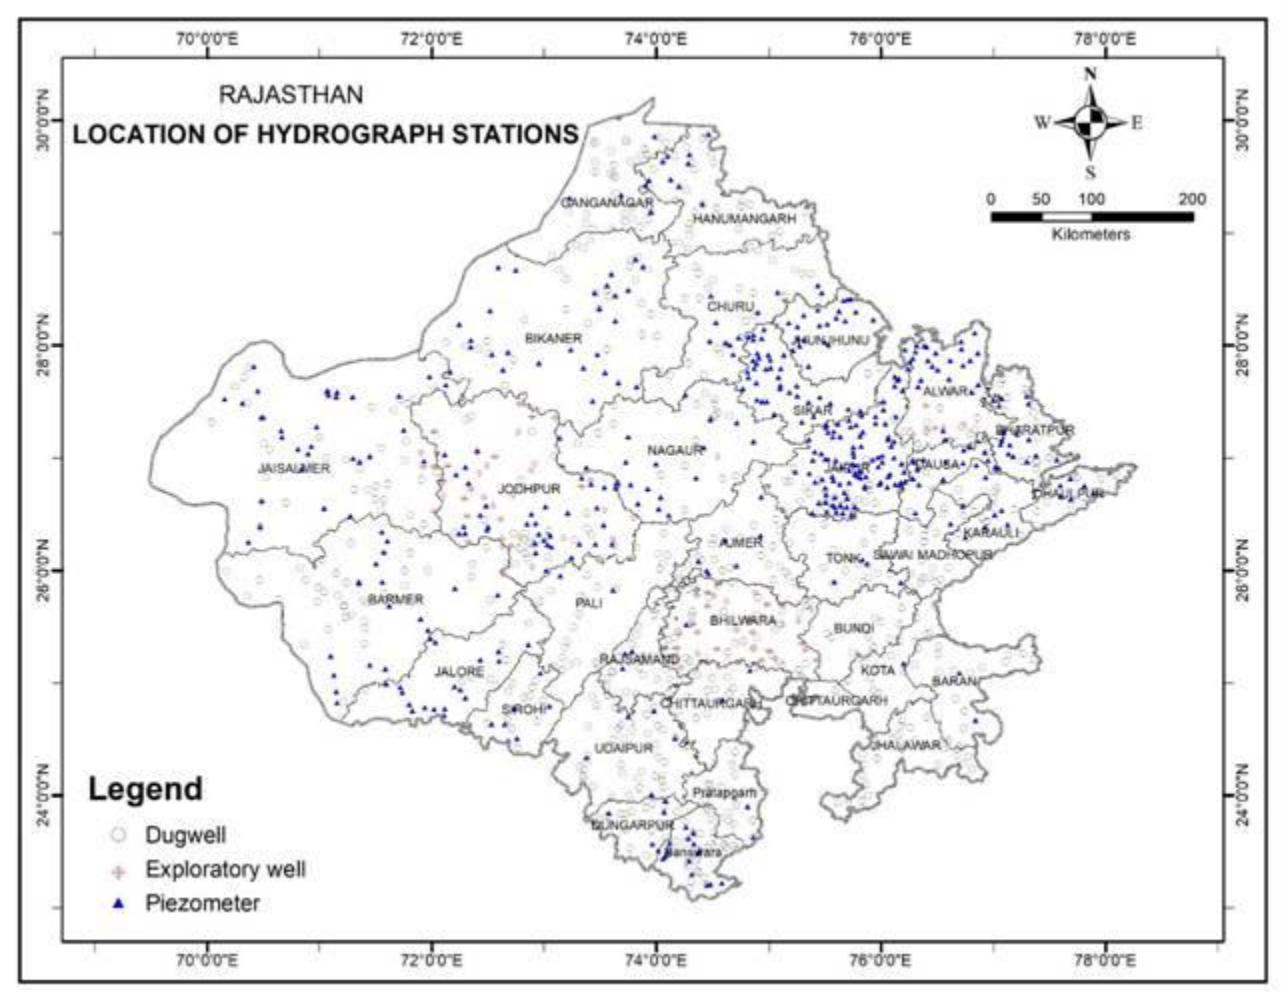

Figure 1: Administrative Divisions

The National Hydrograph Network Stations set-up is a system of spatially distributed observation points at which periodic monitoring of ground water and regime behaviour viz. recording of water levels and temperature and collection of ground water samples for water (chemical) quality analysis are done. The main objectives of monitoring of water levels and water quality are to observe the rise and fall of ground water levels and to study changes in quality of water in space and time consequent to changes in the inputs and outputs.

Database on ground water levels and quality created through this effort forms an important tool in the evaluation of optimum development and decision making on the various aspects of water resources management. Presently 1266 NHS comprises of 709 dug well and 557 piezometers in the state are being monitored and are represented on map of Rajasthan in Figure-2.

**Figure 2: Location of National Hydrograph Stations**

District-wise distribution is given in Table 1.

**Table 1: Area of Districts and Number of NHS as on 31.12.2022**

S. No.	District	Geographical area (sq km)	Total Number of NHS		
			Dug well	Piezometer	Total
1	Ajmer	8481	25	7	3
2	Alwar	8380	12	33	4
3	Banswara	4536	30	15	4

## 2. PHYSIOGRAPHIC FEATURES

### 2.1 Topography

The state has a fairly mature topography developed during the long period of denudation and erosion. The present physiography and landforms are greatly determined by geological formations and structures and is the product of the past fluvial cycle of erosion and the recent & continuing desert cycle of erosion. The Physiographical map of Rajasthan is shown in figure-3

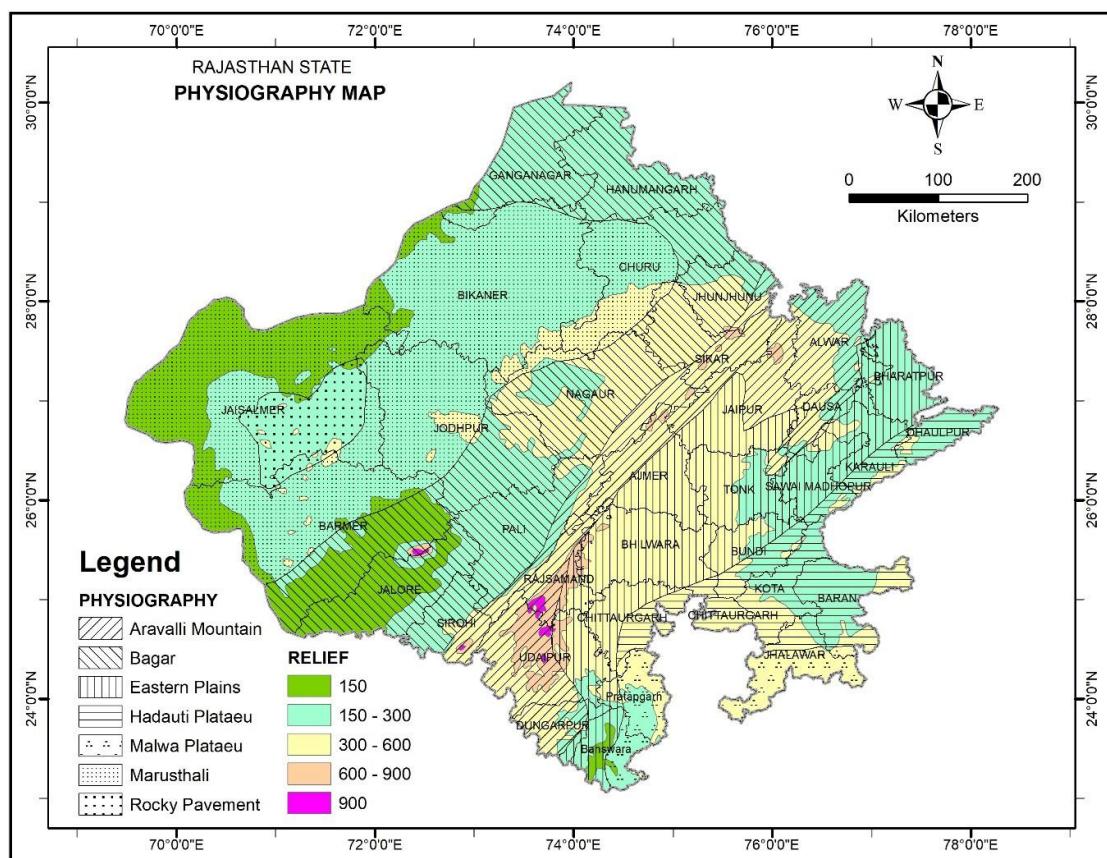

Figure 3: Physiography

Physiographically the state can be divided into four units:

- Aravalli hill ranges
- Eastern plains
- Western Sandy Plain and Sand Dunes and
- Vindhyan Scarpland and Deccan Lava Plateau

### **2.1.1 Aravalli Hill Ranges**

The Aravalli ranges trending NE-SW are the oldest mountain chain in India. The elevation of these hill ranges varies from about 600 metres to over 900 metres above mean sea level (m amsl). They are composed of Bhilwara, Aravalli and Delhi Super group of rocks ranging in age from Archaean {2500 million year (my)} to Proterozoic (740 my). These ranges form a series of rugged hills with rounded surfaces. The quartzite however, stands out as scarps. Near Ajmer, these separate out south west wards into a number of parallel ridges. At Mount Abu, the clusters of granite peaks reach a maximum height of 1722 m amsl at Guru Sikhar.

### **2.1.2 The Eastern Plains**

In the plains, east of the Aravalli ranges, the altitude varies from 150 m to 450m amsl. The general trend of the slope varies from place to place. In Dungarpur and Banswara districts it is mainly from north to south, in Alwar district it is from south to north and in the remaining districts, forming the central and north eastern Rajasthan, it is from west to east. The Vindhyan plateau marks the south - eastern limit.

### **2.1.3 The Western Sandy Plains and Sand Dunes**

The sandy plains in western Rajasthan, forming a part of Thar Desert, are mainly occupied by alluvium and blown sands. These plains are further sub-divided into three units:

- Sandy Arid Plain (Marusthal)
- Semi-arid Transitional Plain
- Ghaggar Plain

The Sandy Arid Plain is a typical desert terrain. It includes the western most districts of Jaisalmer, Bikaner and part of Barmer, Jodhpur, Nagaur, Churu and Ganganagar. The line dividing the Sandy Arid Plain and the Semi-arid Transitional Plain as well as Ghaggar Plain is based on climatic parameters and water resource availability.

The eastern boundaries of the Semi-arid Transitional Plain are the foot-hills and their extension on the western side of Aravalli ranges. Sand dunes are prominent and the terrain is punctuated with isolated hills of granites and rhyolites. The altitude varies from 30m to 300m amsl. The general slope is from northeast to southwest.

The Ghaggar Plain consists mainly of former flood plains and aeolian deposits. Networks of canals cover the entire area. The southern and southeastern part is occupied by medium to high dunes. Nineteen of these interdunal depressions are being utilised for storing the diverted Ghaggar flood waters. The central part of the

Ghaggar Plain is drained by the regulated flood waters of Ghaggar River.

#### **2.1.4 Vindhyan Scarpland and Deccan Lava Plateau**

The southeastern plains are locally characterised by plateau, scarp land and ravines. The Vindhyan scarpland are seen all along the Great Boundary Fault from Chittorgarh to the trijunction of Bharatpur, Dholpur and Sawai Madhopur districts. They have an average elevation of 300m to 580m amsl.

The Deccan Lava Plateau is mainly confined to parts of Kota, Jhalawar, Banswara and Chittorgarh districts. The elevation ranges from 300m to over 500m amsl.

The ravines, locally impassable, are confined to the alluvium overlying the Vindhyan in Dholpur, Sawai Madhopur, Jhalawar and Kota districts along the Chambal river and its tributaries.

### **2.2 Drainage**

The Aravalli Hill Ranges form the main water divide in Rajasthan. Luni is the only river west of Aravallis. In the remaining area of western Rajasthan comprising about 60% of the geographical area of the state, the drainage is internal, and the streams are lost in the desert sands after flowing for a short distance from the point of origin. Luni itself essentially is an ephemeral stream with flood cycle of 16 years. Drainage in western Rajasthan is towards west and south - west. In the east of Aravalli ranges the main drainage is towards north - east.

The other important catchments include Yamuna-Ganga in the north east, and Mahi and Sabarmati in the south west with flow towards south. The former three catchments support perennial rivers. In the northern and north-eastern parts of eastern Rajasthan, the Banganga, Barah, Sota, Sahib and Kantli rivers are of inland nature. The drainage in the whole of Rajasthan is generally dendritic.

In the desert area a few salt lakes and depressions exist, prominent among them being the Sambhar Lake, Didwana Lake, Bap, Pachpadra and Rann of Jaisalmer and Pokhran.

## **3. CLIMATE AND RAINFALL**

### **3.1 Climate**

Climatically, the year in Rajasthan can be divided into three major conventional seasons as follows:

- The Hot- Weather Season (March to end of June)
- Monsoon Season (End of June to September)

➤ The Cold- Weather Season (October to February)

The India Meteorological Department has further sub-divided the cold season into two divisions, i.e. The Season of retreating monsoon (October to December) & the cold season (January to February). These seasonal variations have been broadly based on temperature and rainfall conditions in different months.

### 3.2 Rainfall

Rainfall is the major source of ground water recharge in the state. The state receives 90 % rainfall from southwest monsoon from June to September. The winter rainfall is meagre. Map showing distribution of average annual rainfall during 2021 in the State (Figure 4).

There are 349 Rain gauge stations in the state. The annual rainfall data of ten years 2011 to 2020 have been analysed to calculate average rainfall of each district in the respective years. The average annual rainfall of the state during the period 2021 works out to be 643.9 mm.

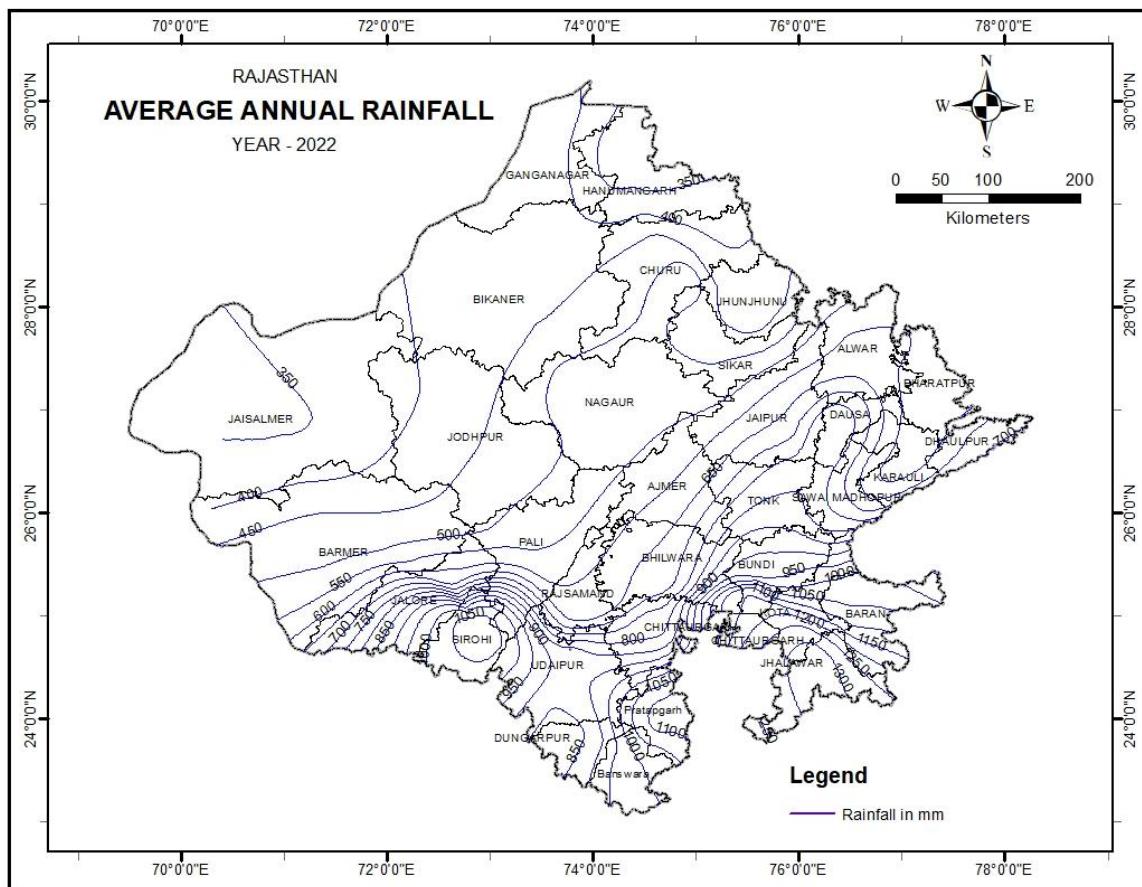

Figure 4: Distribution of Average Annual Rainfall

The average annual rainfall and departures (%) from normal annual rainfall in the state is shown in figure 4. The percentage departures of average annual rainfall from Normal (1901-70) have been computed for the last ten years and tabulated in Table 2. It is observed that the average annual rainfall in the State, during the year 2021 is 29.5% more than the normal annual rainfall. The average annual rainfall in the state was more than 21.2% of average (2013-22) rainfall.

**Table 2: Average Annual Rainfall and Departure (%) From Normal Rainfall.**

S. No.	District	Normal (1901-70)	Average rainfall (2013-22) (mm)	Rainfall - 2022 (mm)	Departure (%) in 2022 from normal rainfall	Departure (%) in 2022 from Average rainfall
1	Ajmer	437	536.617	573.1	25	6.37
2	Alwar	626	563.0577	615.8	13	8.56
3	Banswara	870	940.9554	998.3	13	5.74
4	Baran	895.3	1076.585	1049.2	26	-2.61
5	Barmer	260	345.2562	476	75	27.47
6	Bharatpur	675.1	599.8897	572.7	5	-4.75
7	Bhilwara	603.3	667.9568	675.2	12	1.07

	<b>RAJASTHAN</b>	<b>549.1</b>	<b>651.58</b>	<b>696.51</b>	<b>33.21</b>	<b>6.45</b>

A perusal of Figure 5 reveals that the rainfall in the east of Aravalli is significantly higher as compared to the western part.

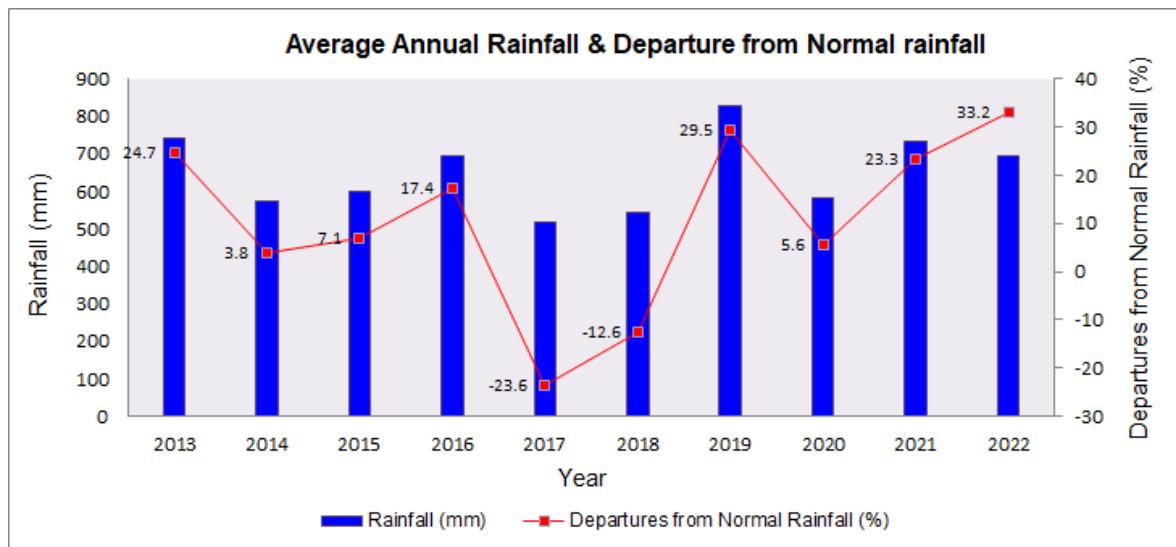

Figure 5: Annual Rainfall and Departure from Normal

### 3.3 Temperature

The hot weather season commences in the month of March and continues through April to June. In the month of May the diurnal range of temperature increases more and the day become hotter. During June the mean maximum temperature reaches as high as  $48^{\circ}\text{C}$ .

January is the coldest month. The normal minimum temperature (January) range from  $2^{\circ}\text{C}$  in the north to  $7.8^{\circ}\text{C}$  in south. At Mount Abu (1195 m AMSL), temperature dips to freezing point during the month of December/January. In eastern Rajasthan the range of normal minimum temperature (January) in and around the Aravalli hill ranges is  $7^{\circ}\text{C}$  to  $8^{\circ}\text{C}$  which increases towards the east and attains a high of more than  $10^{\circ}\text{C}$  in the districts of Kota and Bundi.

## 4. GEOLOGY

Diverse rock types ranging from the oldest Archaean rocks to sub- Recent alluvium and wind-blown sand are exposed in Rajasthan. In a major portion of the area, particularly in

western Rajasthan, the oldest rocks are concealed below a thick cover of alluvium and wind-blown sands. A generalised stratigraphic succession of various formations and rock types is given in Table 3.

**Table 3: Geological Succession**

GEOLOGICAL TIME UNIT		LITHOSTRATIGRAPHIC TIME UNIT		LITHOLOGY
ERA	PERIOD	SUPERGROUP / GROUP		
RECENT				Alluvium and blown sand
CAINOZOIC (TERTIARY)	Eocene	Mandai/ Akli/ Kapurdih/ Jogira/ Banda/ Khuiala/ Palana		Sandstone, bentonitic clay & fuller's earth
DECCAN TRAPS			Basalt	
MESOZOIC	Cretaceous	Abur / Fatehgarh		Sandstone, limestone, clay and lignite
	Jurassic	Paruhar/ Bhadesar/ Baisakhi/ Jaisalmer/ Lathi		Limestone, sandstone & shale
PALAEozoic	Permo- Carboniferous		Bhadura	Sandstone & boulders
		Marwar	Nagaur/ Bilara/ Jodhpur	Sandstone, gypsum, siltstone, limestone, dolomite & shale
UPPER PROTEROZOIC		Vindhyan	Bhander/ Rewa/ Kaimur/ Semri	Sandstone, shale, limestone, conglomerate & basic flows
		Acid, Basic and Ultrabasic Intrusives and Extrusives Malani Volcanics / Plutonics Kishangarh Syenite		
LOWER PROTEROZOIC		Delhi	Ajabgarh/ Alwar/ Sirohi/ Punagarh/ Raialo	Quartzite, schist, gneiss, marble, shale, slate, phyllite & basic flows
		Granite, Basic & Ultrabasic Intrusives		
		Aravalli	Jharol/ Bari/ Udaipur/ Debari	Quartzite, schist, phyllite, ongglomerate, greywacke, etavolcanics & marble
		Granite & Basic Intrusives		
ARACHAEAN		Bhilwara	Ranthambore/ Rajpura-Dariba/ Hindoli	Phyllite, slates, schist, gneiss, granite gneiss & migmatites

#### 4.1 Archaeans

The Archaeans in Rajasthan are represented by Bhilwara Supergroup and comprise Banded Gneissic Complex representing the oldest meta-sedimentary sequence along with Berach Granite.

## **4.2 Proterozoics**

Aravallis: Aravalli Supergroup unconformably overlies the Archaeans and consists of phyllites, greywackes, quartzites and dolomites intruded by granites and mafic rocks.

Delhis: These are exposed over a large part of central and north eastern Rajasthan and consist dominantly of quartzites, biotite-schist, calc-schist and marble.

Vindhyanas: Vindhyanas unconformably overlie Delhis and have been deposited in two separate basins on either side of the Aravallis. In the eastern part these comprise unmetamorphosed, relatively undisturbed, sandstones, limestones and shales. Great Boundary Fault separates them from Aravallis and Archeans.

Intrusives and extrusives: Nepheline syenites are exposed around Kishangarh and are post-Delhi in age. Erinpura Granite is the principal intrusive into the Delhis and are exposed around Ajmer and Mount Abu. Malani Suit of Igneous rocks consisting of rhyolites and pyroclastic material are exposed around Jodhpur and are post-Delhi in age.

## **4.3 Palaeozoics**

In the western part of the state, Marwar Super Group of Lower Palaeozoic age consists of three groups namely Jodhpur group (mainly sandstone & shale), Bilara Group (mainly limestone and dolomite) and Nagaur group (sandstone, siltstone and gypsum). Overlying the Marwar Super Group are the Badhura Formation of Permo-Carboniferous age comprising sandstones and boulders.

## **4.4 Mesozoics**

Mesozoics are exposed mainly in Jaisalmer and Barmer districts. These comprise sandstones and limestones.

## **4.5 Deccan Traps**

Deccan Traps occupy a part of southeastern segment of the state covering parts of Banswara, Baran, Jhalawar and Chittorgarh districts. These overlie pre-Aravallis, Aravallis and Vindhyanas. These are basaltic to doleritic in composition and are uniform over a large area.

## **4.6 Tertiary's**

Sandstones, bentonitic clay and Fuller's earth are the Main litho-units and are exposed in Barmer, Bikaner and Jaisalmer districts.

## **4.7 Recent**

This group consists of alluvium, blown sands, kankar and evaporites and is widely spread in the state.

## 5. HYDROGEOLOGY

The hydrogeological map of Rajasthan is shown in figure 6.

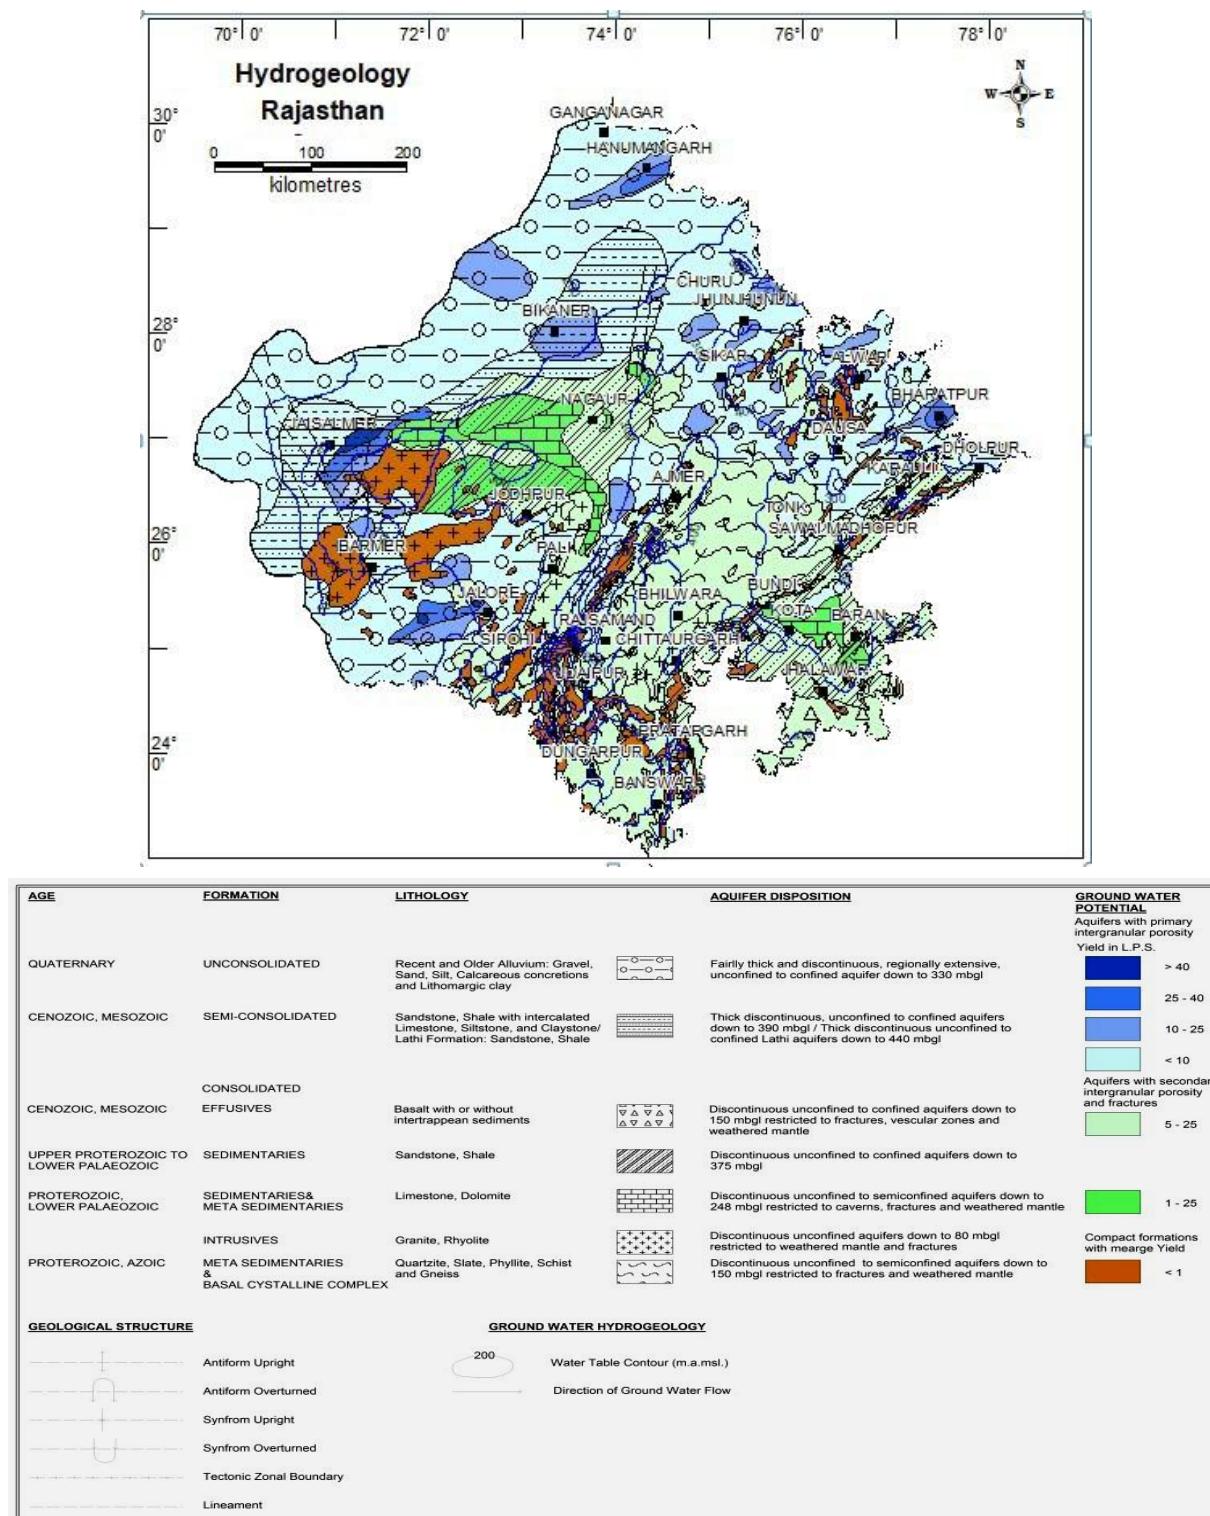

Figure 6: Hydrogeological map of Rajasthan

The principal source of recharge to ground water in Rajasthan is rainfall. In canal irrigated areas, a part of canal water through seepage from conveyance system and part of water i.e. utilised for irrigation also returns to ground water and contributes to storage.

For broadly grouping geological formations from ground water occurrence & movement considerations, the various lithological units have been classified into two groups on the basis of their degree of consolidation and related parametres these are:

I Porous formations

- (a) Unconsolidated formations
- (b) Semi-consolidated formations II

Fissured formations

- (a) Consolidated sedimentary rocks
- (b) Igneous and metamorphic rocks
- (c) Volcanic rocks
- (d) Carbonate rocks

### **5.1 Porous Formations**

The Quaternary sediments comprising younger as well as older alluvium are the most important unconsolidated formations due to their wide-spread occurrence. The sediments are composed of clay, silt, sand, gravel and mixture of concretions etc. Sand, gravel and admixture of these form the potential aquifers in northern, eastern, north-eastern, western and south-western parts of the state. The maximum-drilled thickness of alluvium is 543.51 metres below ground level (m bgl) at Anupgarh in Ganganagar district.

The semi-consolidated formations belonging to Palaeozoic, Mesozoic and Cainozoic Groups are composed of siltstone, claystone, sandstone, shale, conglomerate and limestone. Sandstones and limestones form the main aquifers in Jaisalmer, Jodhpur, Barmer and Bikaner districts. Sandstones of Lathi formation are the most potential aquifers in the districts of Jaisalmer, Jodhpur and Barmer.

### **5.2 Fissured Formations**

Fissured formations, as hydrogeological unit, occupy 32% area of the state and can be broadly classified into four units.

Consolidated sedimentary rocks, excluding carbonate rocks, include sandstones and shales. In eastern and south-eastern part of the state these belong to Vindhyan Supergroup whereas in western Rajasthan these belong to the Marwar Supergroup.

Igneous and metamorphic rocks of lower Proterozoic age comprise slate, quartzite, phyllite, schist, gneiss and various crystallines of Bhilwara Supergroup. These are mostly found in the districts of Banswara, Dungarpur, Udaipur, Chittorgarh, Bhilwara, Tonk, Jaipur, Alwar and Jhunjhunu in eastern Rajasthan and Nagaur, Churu, Barmer, Jaisalmer, Pali, Jalore, Sirohi and Jodhpur districts in western Rajasthan.

Volcanic rocks include Deccan Trap Lava Flows and occur in parts of Barmer, Jhalawar, Chittorgarh and Banswara districts. These are basaltic to doleritic in composition.

Occurrence and movement of ground water in these formations is controlled by the presence of vesicles, extent of weathering, jointing and fracture pattern.

Carbonate rocks include limestone, marble and dolomite of Proterozoic and Upper Palaeozoic to Mesozoic age and occupy parts of Kota, Bundi, Jaipur, Sawai Madhopur and Alwar districts on the eastern side of Aravallis and parts of Nagaur, Bikaner, Jaisalmer and Jodhpur districts in western Rajasthan.

## **6. GROUNDWATER REGIME MONITORING**

Ground water monitoring is carried out mostly through a network of observation open wells all over the state. A few purpose-built stations (piezometers) have also been installed. These wells serve as permanent hydrograph network stations. The network of observation station is being improved by construction of new purpose-built piezometers. This will provide a better scientific environment, represent the true state of water levels and an even distribution of observation stations in the state.

At present the National Hydrograph Network Stations are being monitored four times a year simultaneously throughout the state on the under-mentioned dates:

January	1st to 10th of the month - Represent water level during irrigation period
May	20th to 30th of the month - Represent water level of Pre-monsoon period
August	20th to 30th of the month - Represent peak water level of Monsoon period
November	1st to 10th of the month - Represent water level of Post-monsoon period

Water sample are collected from each of the network station during May (Pre-monsoon) every year to evaluate the changes in quality regime of ground water.

## 6.1 Distribution of the National Hydrograph Stations

A total of 1266 stations were monitored in the entire state. Arrangements for selection of alternative sites in place of dried up dug wells and cleaning & rehabilitation of piezometers that have been damaged due to tempering by ignorance are being made. Out of 1266 NHS, open dug-wells were 708 and piezometers 558 are being monitored. The district-wise distribution of hydrograph stations is in Table 1.

For computation of unit area per NHS, the effective area is arrived at by subtracting the forest and hill area from total geographical area. Thus on an average one NHS represents 271 sq km. The density of the stations is considered to be low. The net-work is therefore under redesigning and alternative new stations shall be set-up within few years time frame to bring the net-work to a near optimal level.

In all there are 15 main river basins in the state. The distribution of NHS (Basin-wise) and percentage of NHS is shown in figure-7 and Table 4. The correlation between percentage geographical area of river basin and percentage of NHS in each basin closely match except in the zone of inland drainage. This is because of the fact that the districts of western Rajasthan viz. Barmer, Bikaner, Jaisalmer, Nagaur and Churu occupying 35% of the total geographical area are thinly populated. Hence the population of ground water structures is also less as compared to other parts.

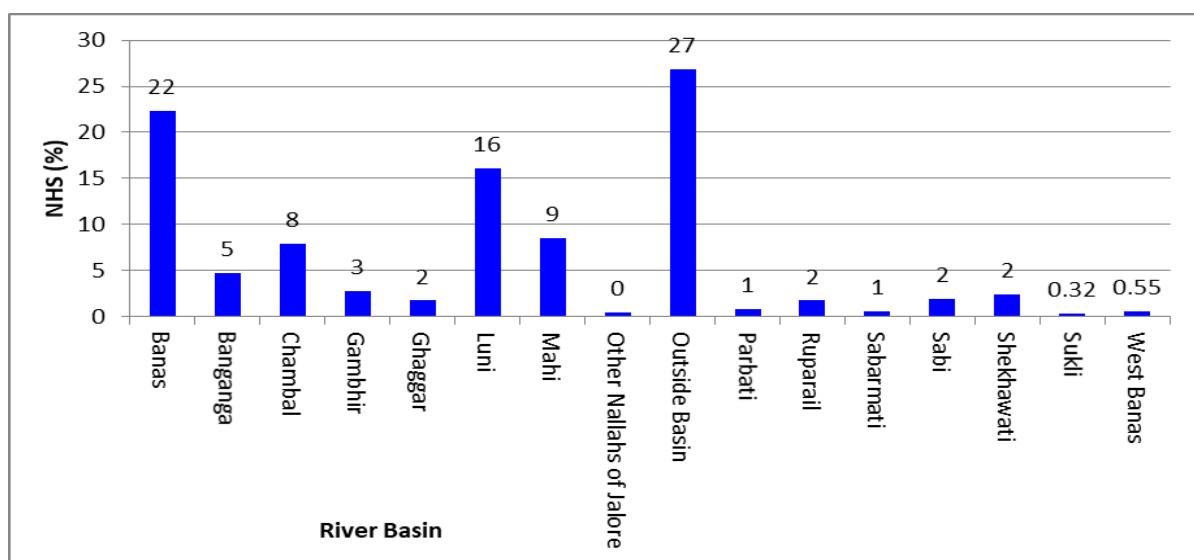

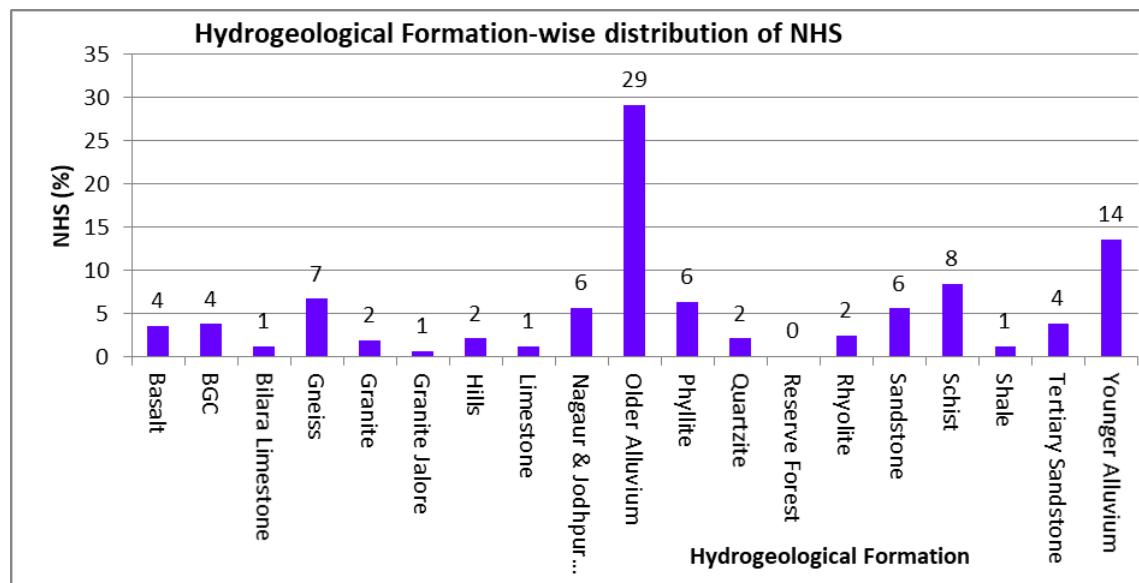

Figure 7: Basin-wise distribution of Monitoring Wells

The break-up of NHS and basin area of each river basin is shown in table 4.

**Table 4: Distribution and Density of NHS (monitored) in River Basins**

River Basin	Area in sq km	Area (%)	No. of NHS	% of NHS	Density sq km/NHS
Banas	47060	14	282	22	167
Banganga	8583	3	60	5	143
Chambal	31243	9	100	8	312
Gambhir	4694	1	35	3	134
Ghaggar	5202	2	22	2	236
Luni	69302	20	204	16	340
Mahi	16611	5	108	9	154
Other Nallahs of	1900	1	6	0	317
Outside Basin	130497	38	341	27	384
Parbati	1887	1	11	1	172
Ruparail	4034	1	22	2	183
Sabarmati	4130	1	8	1	516
Sabi	4524	1	25	2	181
Shekhawati	9751	3	31	2	315
Sukli	990	0	4	0.32	248
West Banas	1831	1	7	0.55	262
Total	342239	100	1266	100	271

The distribution of NHS in the state in major hydrogeological units is given in Table-5 and figure 8.

**Figure 8: Aquifer-wise distribution of Monitoring Wells**

**Table 5: Distribution of Hydrograph Network Stations in Different Hydrogeological Units**

Aquifer	Area		NHS		Density Sq.km/ Station
	Sq. km	%	No.	%	
Basalt	8994	3	46	4	196
BGC	8347	2	48	4	174
Bilara Limestone	9117	3	16	1	570
Gneiss	13813	4	85	7	163
Granite	11300	3	24	2	471
Granite Jalore	1856	1	9	1	206
Hills	14092	4	27	2	522
Limestone	4147	1	16	1	259
Nagaur & Jodhpur Sandstone	21957	6	72	6	305
Older Alluvium	95276	28	369	29	259
Phyllite	13983	4	80	6	175
Quartzite	5009	1	27	2	186
Reserve Forest	1396	0	2	0	698
Rhyolite	6691	2	31	2	216
Sandstone	28223	8	71	6	398
Schist	21494	6	107	8	201
Shale	4585	1	15	1	306
Tertiary Sandstone	24269	7	49	4	495
Younger Alluvium	47690	14	172	14	277
Total	342239	100	1266	100	320

Out of 1,265 NHS, 43% are in unconsolidated formation of Quaternary age and 12% in semi-consolidated formations of Tertiary and Upper Palaeozoic age. The consolidated formations have 45% of the total NHS.

## 6.2 Analysis of Data

The water levels reflect the cumulative effect on ground water regime as a consequence of natural recharge - discharge conditions and artificial draft. Where the draft exceeds the recharge, its manifestation is reflected in the decline of water levels. The hydrograph clearly shows the period of recharge and discharge.

Water level data, collected four times a year, is subjected to analysis for bringing out changes in water levels i.e. rise/fall and trend in the water levels.

## 7. GROUND WATER SCENARIO

Systematic and regular monitoring of ground water levels brings out the changes taking place in the groundwater regime. The maps so generated are of immense help for regional groundwater flow modelling which serves as a groundwater management tool to provide the necessary advance information to the user agencies to prepare

contingency plans in case of unfavourable groundwater recharge situation. The data also has immense utility in deciding the legal issues arising out of conflicting interests of groundwater users.

Water level data of the NHS collected during the year 2021 – 2022 has been utilized to prepare various maps showing depth to water level and fluctuation of water level. Depth to water level maps is useful in dealing with problems of water logging and artificial recharge, where the relative position of water level with reference to the ground surface is of critical importance. Water level fluctuation maps (rise or fall) are indispensable for estimation of change in storage in the aquifer.

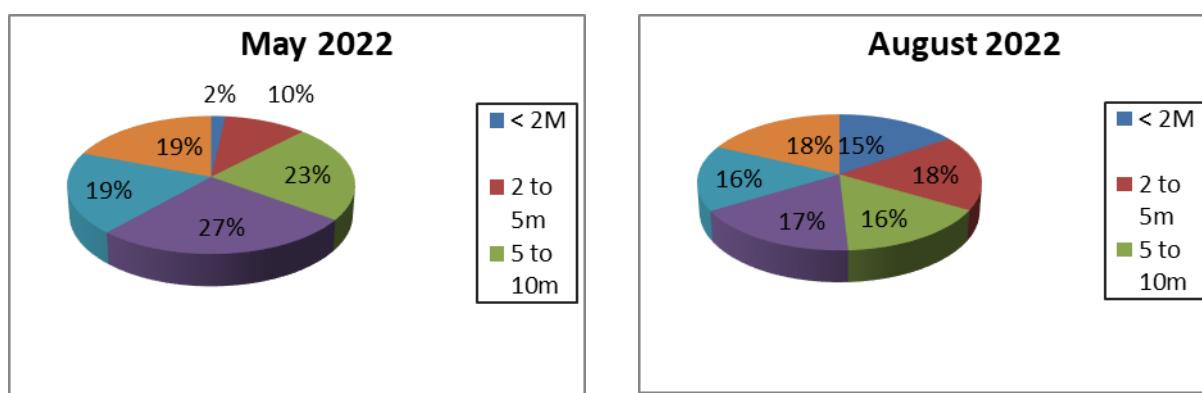

The water level data of open wells and piezometers are presented in the Appendix I.

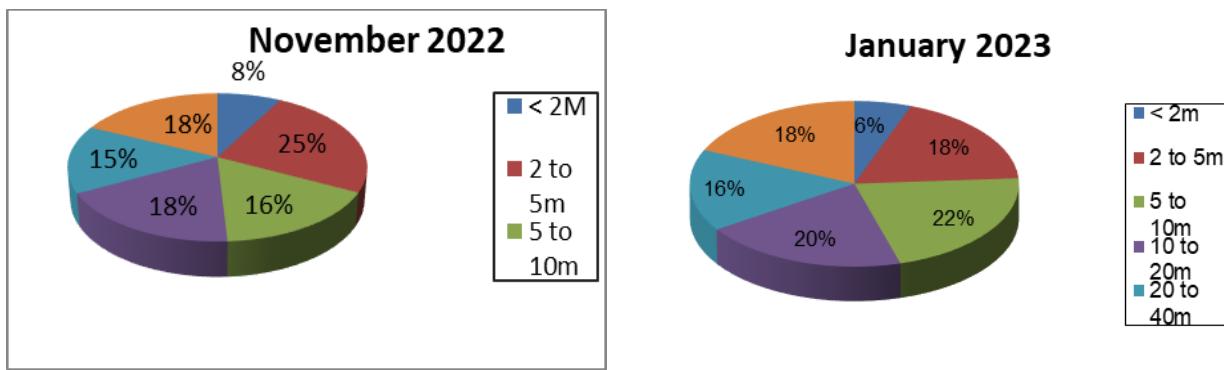

The data is analysed for each set of measurement, and report prepared which include following maps to understand the groundwater regime in the State.

- Depth to water level maps
- Seasonal fluctuation maps- water level fluctuation in comparison to pre-monsoon.
- Annul fluctuation maps - water level fluctuation in comparison to same month in the previous year.
- Decadal fluctuation maps - water level fluctuation in the month of measurement with reference to the decadal average for the same month.

## 7.1 Depth to Water Level (Unconfined Aquifer)

To understand water level behaviour of the NHS stations among various categories during each monitoring period, data were analyzed and depicted in Figure 9 & Annexure I to IV.

**Figure 9: Distribution of Wells among Different Categories of Water Levels**

### 7.1.1 May 2022

The latest monitoring of National Hydrograph Stations (NHS) was carried out in May, 2022. The consolidated well wise details of monitoring have been given in Annexure-1.

Out of 1266 monitoring stations, 945 stations were analyzed for May, 2022. A perusal of Fig-10 displays a wide variation of ground water level. Depth to water level varies from 0.25 mbgl (Tiloli, Bhilwara district & Rawatbhata, Chittorgarh District) to 145.50 mbgl (Hanuman Sagar, Jodhpur district).

Water level more than 40 mbgl was monitored at 19.15 % stations and spread from north west to western and upper central parts covering mostly Jhunjhunu, Sikar, Jalore, Jaipur, Jodhpur, Alwar, Bikaner, Churu & Nagaur, districts and isolated patches in Jaisalmer, Barmer, Dausa, Bharatpur Karauli, Hanumangarh, Gangangar & Bhilwara districts.

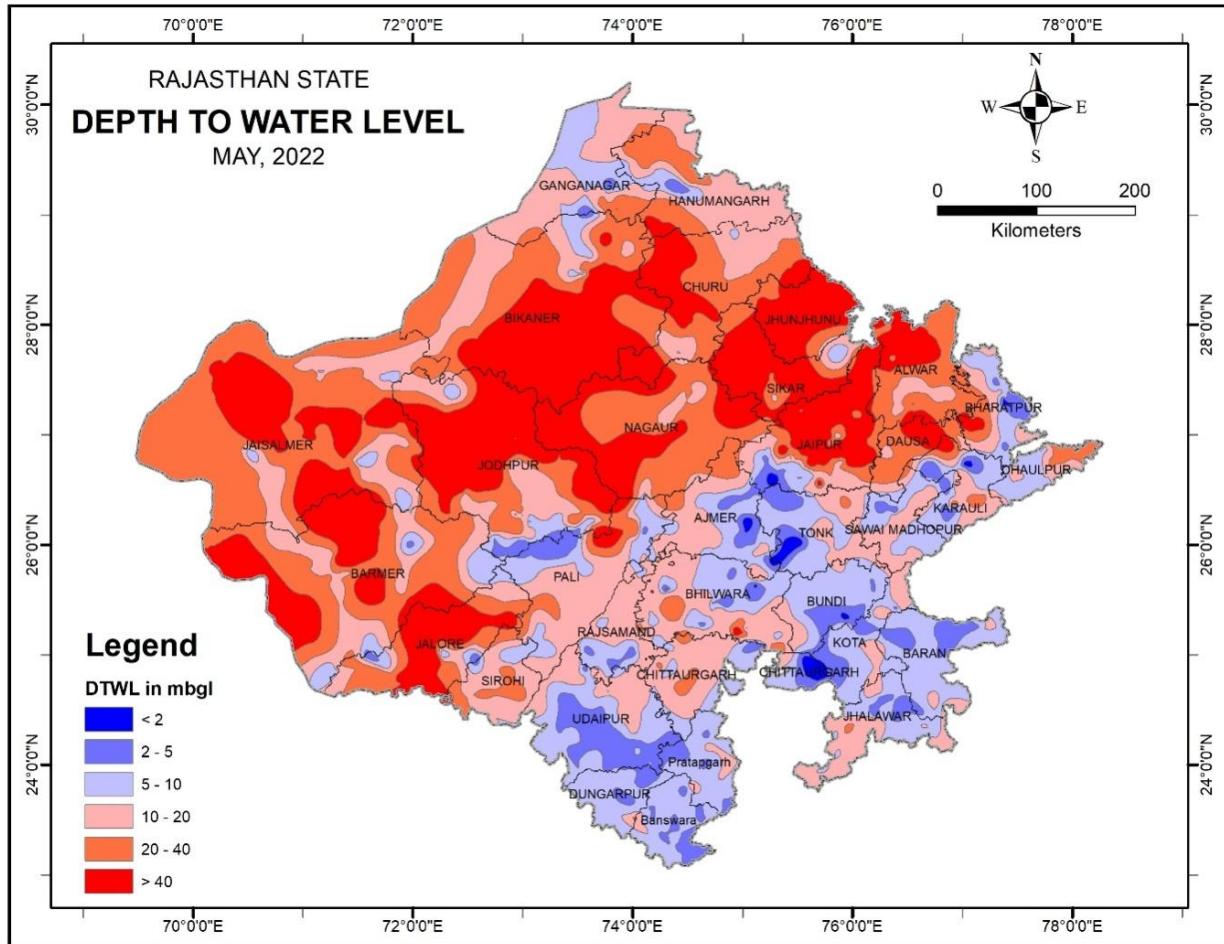

Depth to water level between 20 to 40 mbgl was recorded in 19.26% monitoring stations, stretching from north east to western part of the State, covering major parts of Dausa, Nagaur, Alwar, Churu, Jaisalmer, Hanumangarh, Barmer, Bikaner, Dholpur, Sirohi & Jodhpur districts and isolated locations in all the districts except Sawai Madhopur, Kota, Pratapgarh, Baran, Banswara and Bundi districts.

Depth to water level between 10 & 20 mbgl was recorded in 26.56% stations falling mostly in, Rajsamand, Sirohi, Bhilwara, Sawai Madhopur, Gangangar, Chittorgarh, Hanumangarh, Dholpur, Ajmer, Jhalawar, Pali, Bikaner, Tonk, Udaipur, Dausa, Jodhpur, Barmer, Jaipur, Churu, Bharatpur, Kota and Pratapgarh Districts and at isolated locations in all the districts except Bundi & Jhunjhunu districts.

Depth to water level ranging from 5 to 10 mbgl was recorded at 22.86% stations in falling in south & south eastern part of the state and spread in large patches in Dungarpur, Baran, Pratapgarh, Banswara, Kota, Tonk, Jhalawar, Bundi, Pali, Ganganagar, Ajmer, Sawai Madhopur, Udaipur, Karauli, Bharatpur, Bhilwara, Dholpur, Chittaugarh, Rajsamand & Sirohi districts as well as at isolated patches in all the districts except Alwar & Jhunjhunu districts.

Water level ranging between 2 & 5 mbgl was observed at 10.37% stations spread over south, south east, northern part of State falling in Bundi, Udaipur, Dungarpur, Banswara, Baran, Kota, Pratapgarh, Karauli, Ajmer, Jhalawar districts Pali, Rajsamand, Bharatpur, Sawai Madhopur & Jalore Districts and isolated patches in Bhilwara, Dhaulpur, Jodhpur, Tonk, Jaipur, Ganganagar and Barmer districts.

Shallow water level i.e. less than 2 mbgl have been observed at 1.80% stations at isolated locations falling in Chittaugarh, Tonk, Bundi, Karauli and Sawai Madhopur, Bhilwara, Bharatpur, Ajmer, Hanumangarh, Ganganagar, Banswara and Jaipur districts.

**Figure 10: Depth to Water Level (May 2022)**

### 7.1.2 August 2022

The latest monitoring of National Hydrograph Stations (NHS) was carried out in August, 2022. The consolidated well wise details of monitoring have been given in Annexure-1.

Out of 1266 monitoring stations, 979 stations were analyzed for August, 2022. A perusal of Fig-11 displays a wide variation of ground water level. Depth to water level varies from 0.02 mbgl (Intalikhara, Udaipur district) to 148.98 mbgl (Lalka, Alwar district).

Water level more than 40 mbgl was monitored at 17.98 % stations and spread from North West to western and upper central parts covering mostly Jhunjhunu, Sikar, Jaipur, Alwar, Nagaur, Jalore, Jodhpur, Churu, Bikaner & Barmer districts and isolated patches in Jaisalmer, Dausa, Hanumangarh, Bharatpur and Karauli districts.

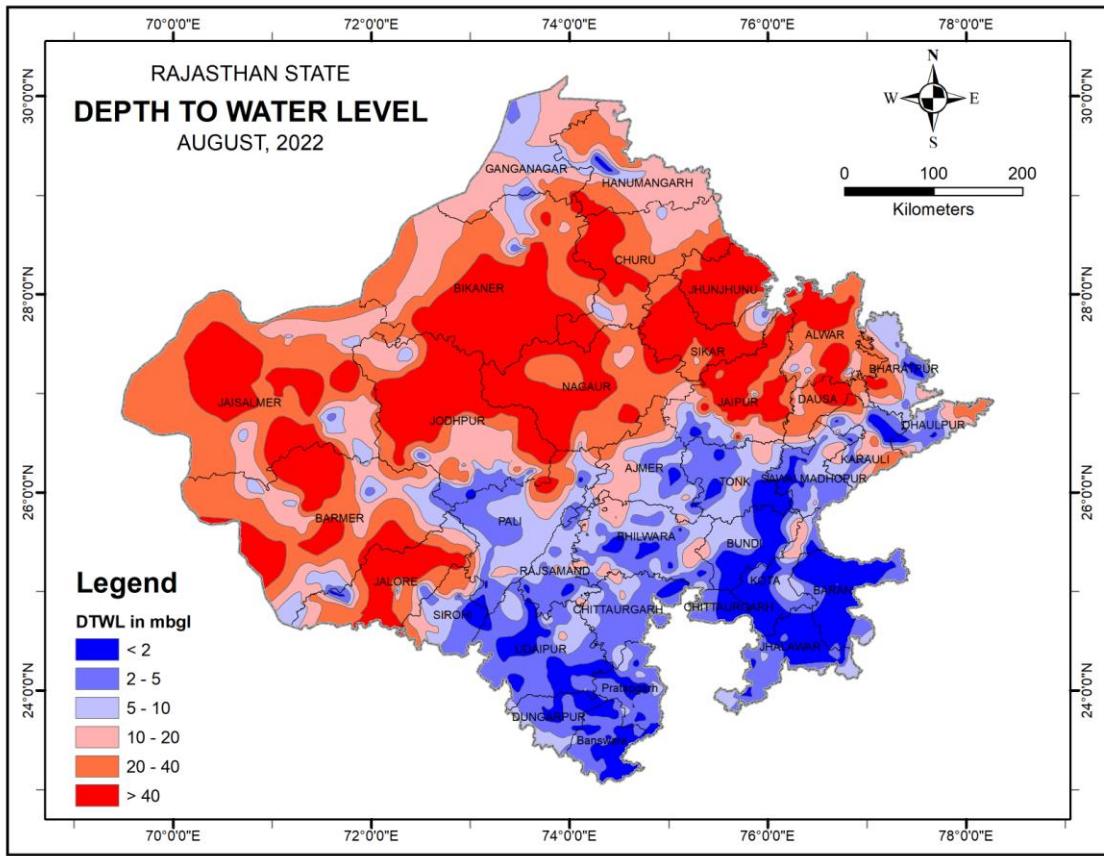

Depth to water level between 20 to 40 mbgl was recorded in 15.63% monitoring stations, stretching from north east to western part of the State, covering major parts of Jaisalmer, Hanumangarh, Churu, Barmer, Nagaur, Alwar, Bikaner, Sikar & Dausa, districts and at isolated locations in Jalore, Karauli, Bharatpur, Dholpur, Jodhpur, Gangangar, Sirohi, Jaipur, Pali, Jhunjhunu and Ajmer districts.

Depth to water level between 10 & 20 mbgl was recorded in 17.26% stations falling mostly in Dausa, Gangangar, Sirohi, Hanumangarh, Ajmer, Bikaner Karauli, Bhilwara, Churu, Dholpur, Jodhpur, Kota, Pali, Barmer, Nagaur and Alwar Districts and at isolated locations in all the districts except Pratapgarh, Dungarpur, Jhalawar, Bundi, Banswara, Baran and Jhunjhunu districts.

Depth to water level ranging from 5 to 10 mbgl was recorded at 15.73% stations in falling in south & south eastern part of the state and spread in large patches in Ajmer, Chittaugarh, Bharatpur, Ganganagar, Rajsamand, Bhilwara, Pali, Sirohi, Jaipur, Barmer, Jaisalmer, Sawai Madhopur and Pratapgarh Districts and at isolated patches in all the districts except Baran, Sikar & Jhunjhunu districts.

Water level ranging between 2 & 5 mbgl was observed at 17.98% stations spread over south, south east, northern part of State falling in Chittaugarh, Banswara, Udaipur, Dungarpur, Pratapgarh, Sawai Madhopur, Pali, Tonk, Bhilwara, Jhalawar, Baran, Dhaulpur and Districts and in isolated pockets in all the districts except Alwar, Churu, Dausa, Jhunjhunu and Nagaur districts.

Shallow water level i.e. less than 2 mbgl have been observed at 15.42% stations at isolated locations falling in Baran, Bundi, Jhalawar, Kota Banswara, Pratapgarh, Dungarpur, Tonk, Udaipur, Karauli, Sawai Madhopur and Dhaulpur Districts and in isolated patches in Bhilwara, Rajsamand Sirohi, Chittaugarh, Ajmer, Hanumangarh, Jalore, Pali, Bharatpur, Jodhpur and Jaipur districts.

**Figure 11: Depth to Water Level (August 2022)**

### 7.1.3 November 2022

Monitoring of National Hydrograph Stations (NHS) was carried out in November, 2022. The consolidated well wise details of monitoring have been given in Annexure-1.

Out of 1266 monitoring stations, 964 stations were analyzed for November, 2022. A perusal of Fig-12 displays a wide variation of ground water level. Depth to water level varies from 0.06 mbgl (Kumher, Bharatpur district) to 124.50 mbgl (Dhadhu, Jodhpur district).

Water level more than 40 mbgl was monitored at 17.95% stations and spread from north east to western and upper central parts covering mostly Jhunjhunu, Sikar, Jalore, Jaipur, Nagaur, Alwar, Jodhpur, Churu, Barmer, Jaisalmer and Bikaner Districts and in isolated patches in Dausa, Hanumangarh, Bharatpur, Karauli and Ganganagar districts.

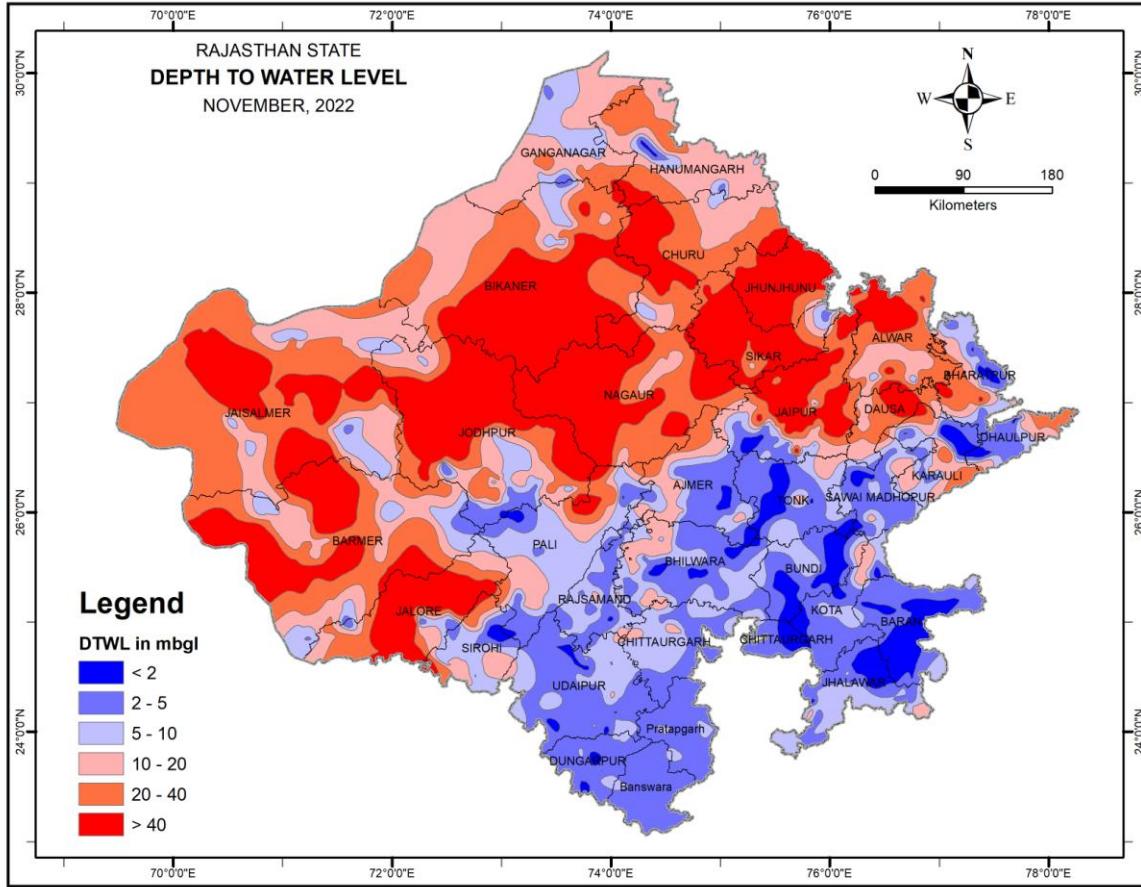

Depth to water level between 20 to 40 mbgl was recorded in 14.83% monitoring stations, stretching from north east to western part of the State, covering major parts of Churu, Hanumangarh, Jaisalmer, Alwar, Bikaner, Nagaur, Barmer, Dausa, Bharatpur, Jodhpur and Dholpur districts and isolated locations in Sikar, Karauli, Ganganagar, Jaipur, Jalore, Pali, Jhunjhunu and Sirohi districts.

Depth to water level between 10 & 20 mbgl was recorded in 18.15% stations falling mostly in Dausa, Ganganagar, Bikaner, Ajmer, Karauli, Hanumangarh, Nagaur, Barmer, Sirohi, Pali, Churu, Bhilwara, Alwar, Chittorgarh, Sawai Madhopur, Jodhpur and Jalore districts and at isolated locations in remaining districts except Pratapgarh, Dungarpur, Bundi, Banswara, Baran, Jhunjhunu Districts.

Depth to water level ranging from 5 to 10 mbgl was recorded at 16.49% stations in falling in south & south eastern part of the state and spread in large patches in Chittorgarh, Rasamand, Pali, Ganganagar, Siroi, Udaipur, Jhalawar, Bhilwara, Bharatpur, Pratapgarh, and Jaisalmer District and at isolated patches in rest of the districts except Baran, Jalore, Sikar, Jhunjhunu and Nagaur districts.

Water level ranging between 2 & 5 mbgl was observed at 24.69% stations spread over south, south east, northern part of State falling in Banswara Pratapgarh Dungarpur, Baran, Sawai Madhopur, Udaipur, Jhalawar, Kota, Ajmer, Bhilwara, Tonk, Rajsamand, Chittorgarh and Dholpur Districts and isolated patches in all other districts except Bikaner, Churu, Dausa, Jhunjhunu and Nagaur Tonk Districts where none of the wells had water levels in this range.

Shallow water level i.e. less than 2 mbgl have been observed at 7.88% stations mostly falling in Bundi, Baran, Kota, Tonk, Dholpur, Jhalawar, Sawai Madhopur, Udaipur and Karauli District and at isolated locations in Bhilwara, Dungarpur, Bharatpur, Hanumangarh, Pali, Rajsamand, Ajmer, Chittorgarh, Jalore, Jaipur, Jodhpur and Banswara districts.

**Figure 12: Depth to Water Level (November 2022)**

#### 7.1.4 January 2023

Monitoring of National Hydrograph Stations (NHS) was carried out in January, 2023. The consolidated well wise details of monitoring have been given in Annexure-1.

Out of 1106 monitoring stations, 964 stations were analyzed for January, 2023. A perusal of Fig-13 and Table II displays a wide variation of ground water level. Depth to water level varies from 0.15 mbgl (Borawas, Kota district) to 146.11 mbgl (Hanuman Sagar, Jodhpur district).

Water level more than 40 mbgl was monitored at 18.26% stations and spread from north east to western and upper central parts covering mostly Jhunjhunu, Sikar, Jalore, Jaipur, Alwar, Jodhpur, Nagaur, Jaisalmer, Churu, Bikaner, Dausa and Barmer Districts and in isolated patches in Bharatpur, Hanumangarh, Dhaulpur, Karauli Districts.

Depth to water level between 20 to 40 mbgl was recorded in 16.08% monitoring stations, stretching from north east to western part of the State, covering major parts of

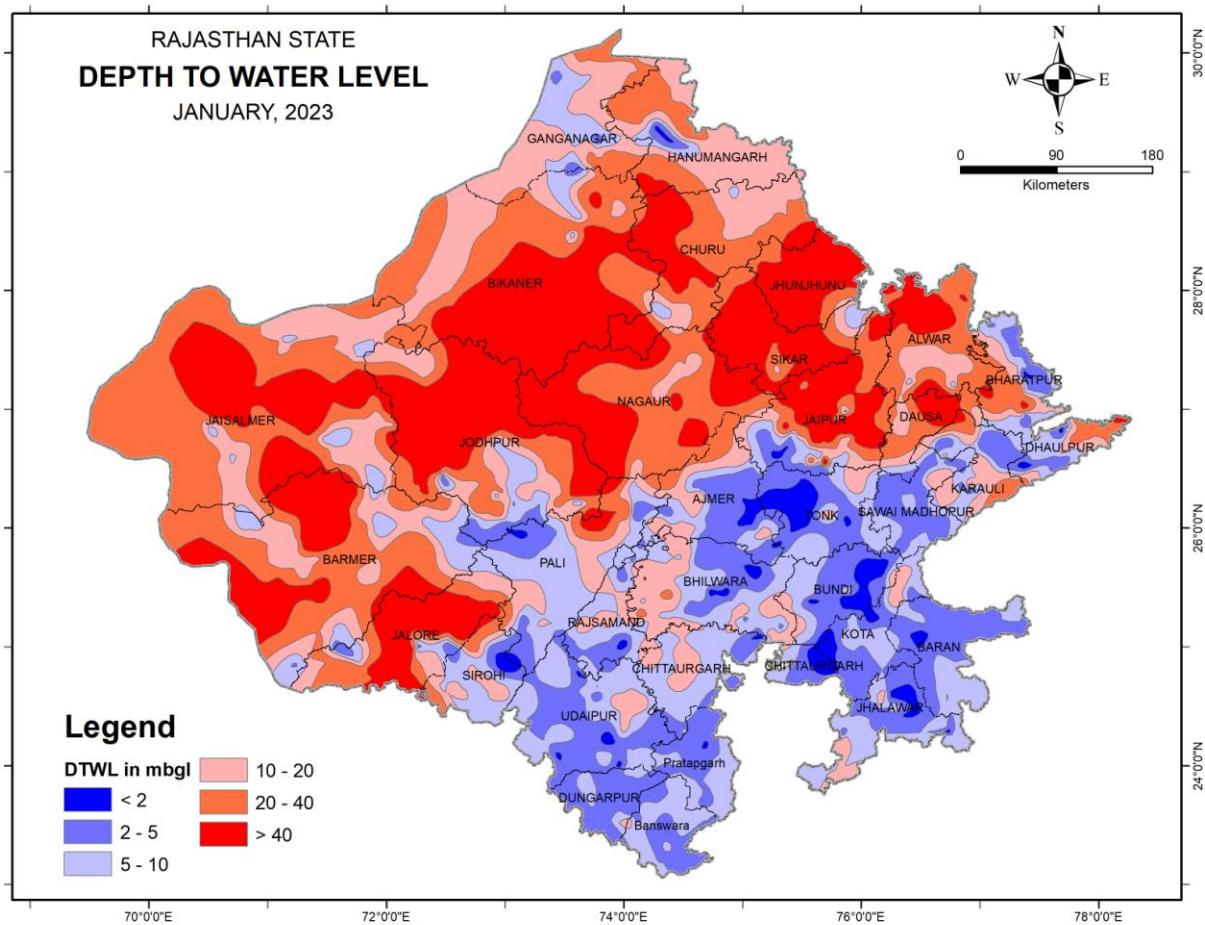

Hanumangarh, Churu, Nagaur, Alwar, Jaisalmer, Bikaner, Barmer, Sikar, Bharatpur, Jodhpur, Dausa and Dhaulpur districts and isolated patches in Karauli, Ganganagar, Jaipur, Jalore, Pali, Jhunjhunu, Sirohi and Bhilwara districts

Depth to water level between 10 & 20 mbgl was recorded in 20.23% stations falling mostly in Dausa, Ganganagar, Chittorgarh, Hanumangarh, Bikaner, Bhilwara, Barmer, Nagaur, Sirohi, Ajmer, Churu, Karauli, Rajsamand and Dholpur Districts and at isolated locations in Pali, Alwar, Jodhpur, Jhalawar, Jalore, Bharatpur, Udaipur, Kota, Jaipur, Kota, Tonk, Dungarpur, Sawai Madhopur, Baran and Sikar Districts.

Depth to water level ranging from 5 to 10 mbgl was recorded at 21.58% stations in falling in south & south eastern part of the state and spread in large patches in Pratapgarh, Rajsamand, Banswara, Sirohi, Chittorgarh, Pali, Jhalawar, Udaipur and Baran Districts as well as at isolated patches in Ganganagar, Dhaulpur, Bhilwara, Sawai Madhopur, Ajmer, Jaipur, Bharatpur, Bundi, Karauli, Jaisalmer, Tonk, Barmer & Bikaner districts with all other districts except Hanumangarh, Jhunjhunu and Nagaur districts.

Water level ranging between 2 & 5 mbgl was observed at 18.36% stations spread over south, south east, northern part of State falling in Dungarpur Sawai Madhopur, Banswara, Tonk, Baran, Kota, Ajmer, Udaipur, Pratapgarh, Bhilwara, Bharatpur, Jhalawar, Bundi & Rajsamand districts and isolated patches in Karauli, Jalor, Pali, Dhaulpur, Sirohi, Jodhpur, Ganganagar, Jaipur, Hanumangarh, Barmer and Jaisalmer districts.

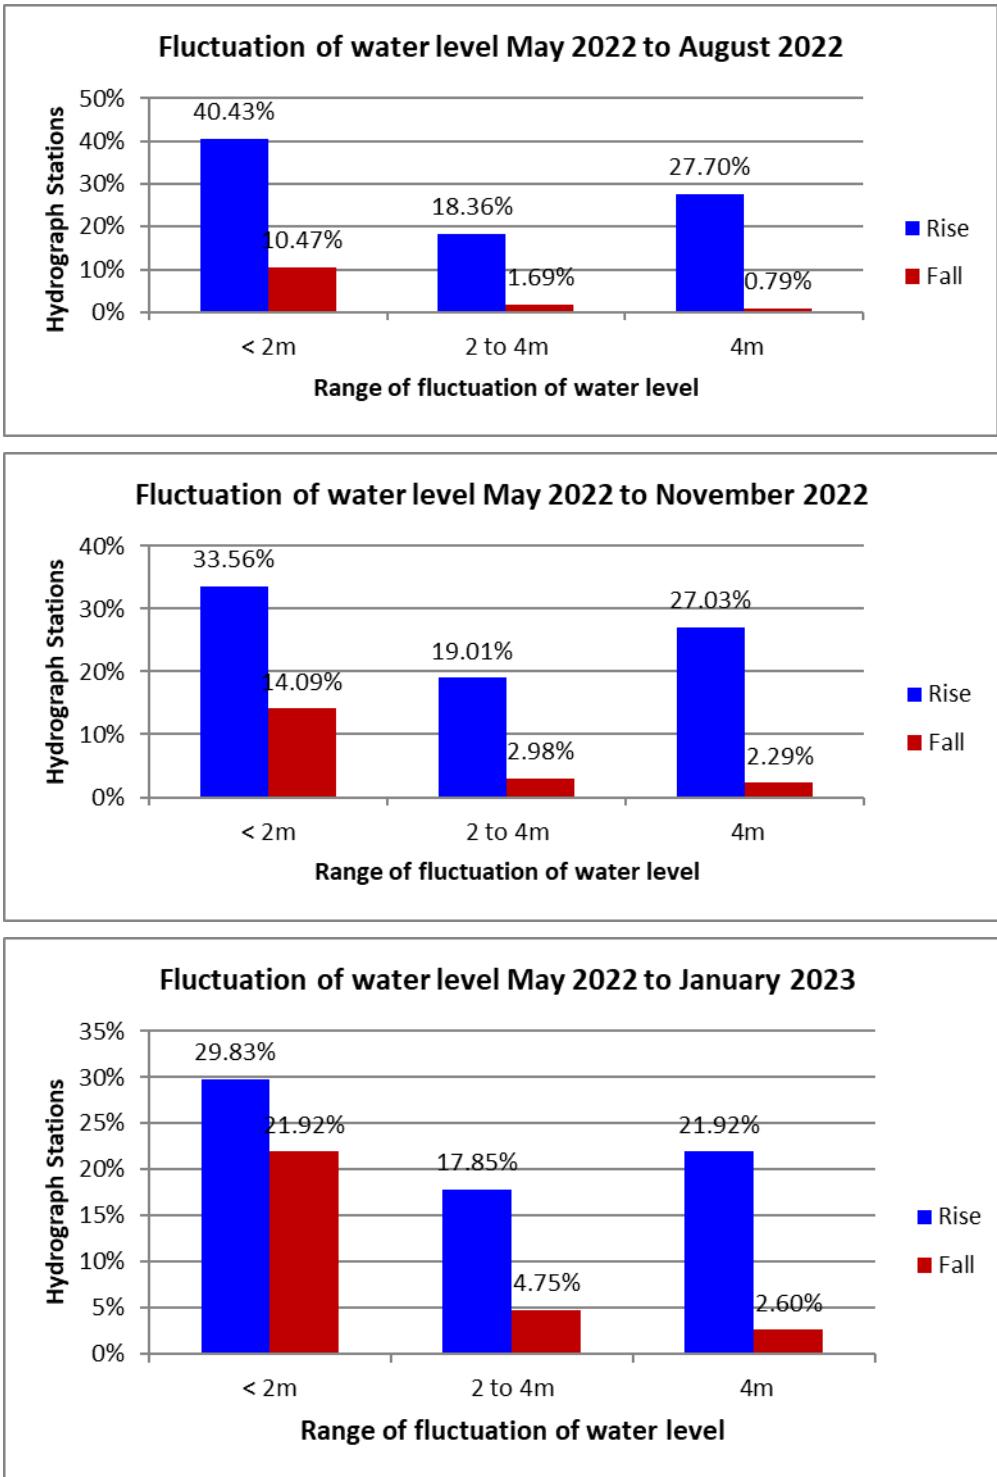

Shallow water level i.e. less than 2 mbgl have been observed at 5.60% stations scattered in Bundi, Tonk, Chittorgarh, Dhaulpur, Baran, Jhalawar, Kota, Karauli, Udaipur, Ajmer, Pali, Bhilwara, Hanumangarh, Sirohi, Banswara, Pratapgarh, Sawai Madhopur, Jaipur, Rajsamand, bharatpur and Jodhpur districts.

**Figure 13: Depth to Water Level (January 2023)**

## 7.2 Seasonal Water Level Fluctuation

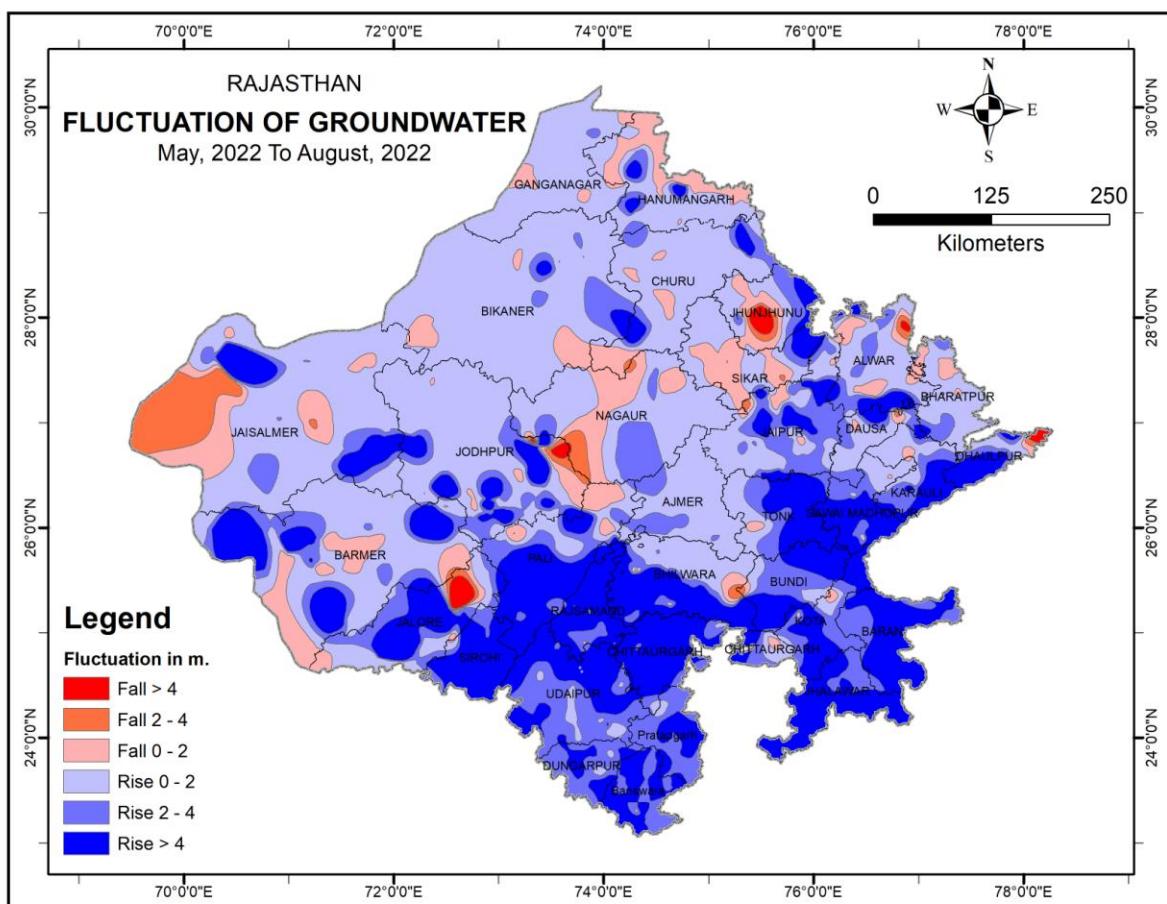

To study effect of monsoon on the groundwater regime and subsequent utilisation of groundwater for various needs like agriculture, irrigation, Domestic etc., changes in depth to water levels with respect to pre-monsoon period were analyzed. The change in groundwater over different periods is presented graphically in Figure 14 and Annexure V to VIII.

**Figure 14: Fluctuation of Water Level (2022-23)**

### 7.2.1 May 2022 to August 2022

Total number of wells analysed are 888. Comparison of water level for May 2022 with that of August (2022) (Fig-15) infer that water level in 86.48% stations show rise wheras 12.95% shows decline in water level. Rise is mostly in isolated pockets scattered mainly in northern part and very few isolated pockets of southern part of the State. Minimum & maximum rise was recorded at 0.01 m (Dhirera Pz of Bikaner and Sangasar of Churu and Jagatsinghwala of Ganganagar district) and 37.25 m (Balki Pz, Bhilwara district).

**Figure 15: Water Level Fluctuation – May 2022 to August 2022**

Rise in water level < 2m in 40.4% stations was observed falling mostly in Ganganagar, Ajmer, Churu, Bikaner, Jaisalmer, Bharatpur, Sikar, Jaipur, Jodhpur, Bundi, Dhaulpur, Barmer, Bhilwara, Hanumangarh, Nagaur, Karauli, Jalore and Sawai Madhopur Districts and at isolated locations in all the remaining districts except Baran and Sirohi Districts Water level rise between 2 & 4 m was

shown by 18.4% stations mostly falling in Pratapgarh, Banswara, Bundi, Baran, Kota, Dungarpur, Pali, Jaipur, Udaipur, Karauli, Sawai Madhopur and Tonk Districts and at isolated locations in all the remaining districts except Churu, Dholpur and Jhunjhunu districts.

Rise of more than 4 m has been recorded at 27.7% stations falling mostly in Sirohi, Jhalawar, Rajsamand, Chittorgarh, Baran, Udaipur, Tonk, Bhilwara, Dholpur, Pratapgarh, Dungarpur, Banswara, Kota, Sawai Madhopur, Jalore, Dausa and Pali districts and at isolated locations in all the remaining districts except Bharatpur and Ganganagar Districts.

About 12.95% stations scattered in all the districts, mostly in north-eastern, western and central parts, shows decline in water level during this period. Minimum & maximum decline was recorded at 0.01 m (Bibipur, Sikar and Bap of Jodhpur district) and 11.70 m (Bhagli, Jalore district).

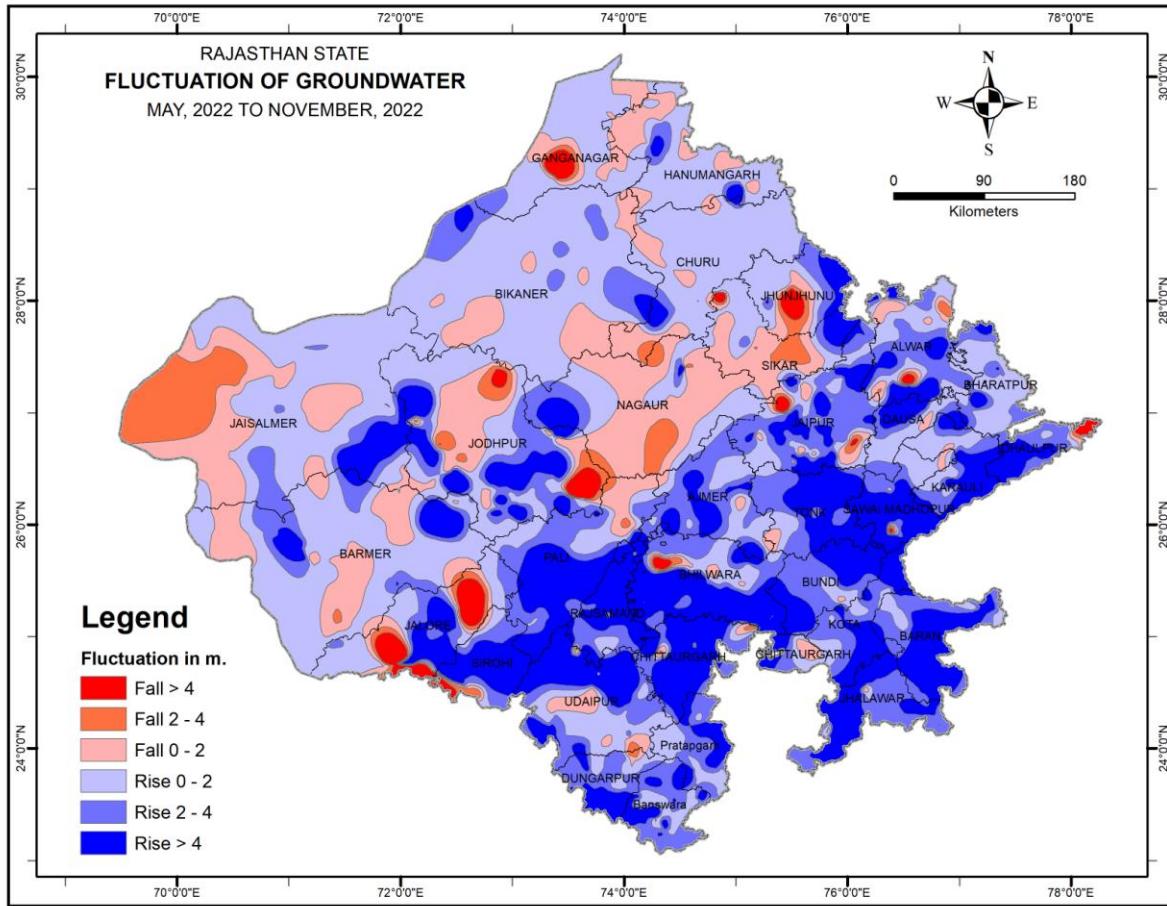

Decline in water level <2m was recorded in 10.5% stations falling mostly in Hanumangarh, Jhunjhunu, Sikar, Barmer, Alwar, Nagaur and Pali Districts and at isolated locations in Bharatpur, Biakner, Karauli, Churu, Jodhpur, Ganganagar, Jalore, Dausa, Tonk, Chittaurgarh, Kota, Jaisalmer, Sawai Madhopur, Jaipur and Bhilwara Districts.

Decline in water level between 2 & 4m was recorded at 1.7% stations at isolated locations in Dausa, Alwar, Sikar, Nagaur, Jaisalmer, Pali, Jodhpur, Barmer, Bhilwara and Jaipur Districts.

Water level decline >4m was exhibited by 0.8% stations at Jhunjhunu, Dhaulpur, Jalore, Alwar, Jodhpur and Jaisalmer Districts.

### **7.2.2 May 2022 to November 2022**

Total number of wells analysed are 873. A perusal of map (Fig-16) represents fluctuation with pre-monsoon period i.e. May, 2022 to November, 2022. Water level analysis reveals that 79.61% stations shows rise, 19.35% decline and 1.66% station shows no change. Rise in water level is confined to south & south-eastern part and isolated locations in northern and western and west central parts of the State. Minimum & maximum rise was recorded at 0.01m (Arjansar, Bikaner district and Jagatsinghwala, Ganganagar District) and 36.45 m (Bakli Pz, Bhilwara district).

**Figure 16: Water Level Fluctuation – May 2022 to November 2022**

Rise in water level <2m was observed in 33.6% stations falling mostly in Jhunjhunu, Churu, Ganganagar, Bharatpur, Bikaner, Jaisalmer, Hanumangarh, Pratapgarh, Barmer, Bundi, Karauli, Sikar, Udaipur, Kota, Jalore, Ajmer and Pali Districts and at isolated locations in all the remaining districts.

Rise in water level between 2 & 4m was observed in 19.0% stations mostly in Dungarpur, Dholpur, Ajmer, Baran, Tonk, Jaipur, Bundi, Kota, Rajsamand, Jhalawar, Banswara, Pali, Sawai Madhopur, Bharatpur, Bhilwara and Pratapgarh Districts and scattered in all remaining districts except Jhunjhunu, Churu, Ganganagar and Sikar districts.

Rise in water level more than 4m has been recorded at 27.0% stations mostly falling in Rajsamand, Sirohi, Chittorgarh, Jhalawar, Bhilwara, Tonk, Dholpur, Dausa, Udaipur, Karauli, Sawai Madhopur, Baran, Kota, Jaipur, Jalore, Banswara, Ajmer, Pratapgarh and Jodhpur districts and scattered in all

the remaining districts except Ganganagar district.

About 19.35% stations spread in eastern, south western, north eastern & north central parts, shows decline in water level. Minimum & maximum decline was recorded at 0.01 m Rayanwali Shallow (Ganganagar district) and 18.30 m (Samau Pz, Jalore district) respectively.

Decline in water level <2m was recorded in 14.1% stations falling mostly in Hanumangarh, Sikar, Nagaur, Ganganagar, Barmer, Churu, Bikaner, Jaisalmer, Jodhpur, Dausa, Alwar and Pali districts and at isolated locations in Bundi, Sawai Madhopur, Dungarpur, Banswara, Udaipur, Jhunjhunu, Jhalawar, Karauli, Chittorgarh, Tonk, Jaipur, Ajmer and Bhilwara districts.

Water level decline between 2 & 4m was recorded at 3.0% stations scattered in Nagaur, Chittorgarh, Alwar, Sikar, Dungarpur Udaipur, Pali, Jodhpur Bhilwara, Jaisalmer, Banswara and Barmer districts. Water level decline >4m was shown by 2.3% stations at scattered locations in Jalore, Sirohi, Jhunjhunu, Dholpur, Sawai Madhopur, Jodhpur, Jaipur, Alwar, Sikar, Ganganagar, Udaipur, Jaisalmer & Bhilwara districts.

### **7.2.3 May 2022 to January 2023**

Total number of wells analysed are 885. A perusal of map (Fig-17) represent fluctuation with pre-monsoon period i.e. May, 2022 to January, 2023. Water level analysis reveals that 69.71% stations shows rise, 29.15% decline and 1.14% station shows no change. Rise in water level is confined to south & south-central part and isolated locations in northern, western and west central parts of the State. Minimum & maximum rise was recorded at 0.02m (Rohal Sobhsar, Sikar district) and 20.05 m (Sargia Kallan, Jodhpur district).

Rise in water level <2m was observed in 29.8% stations falling mostly in Bundi, Baran, Bharatpur, Ganganagar, Bikaner, Karauli, Hanumangarh, Churu, Jalore, Pratapgarh, Kota, Jhunjhunu, Jaisalmer and Alwar Districts and at isolated locations in all the remaining districts except Sirohi.

Rise in water level between 2 & 4m was observed in 18.0% stations mostly in Chittorgarh, Ajmer, Dhaulpur, Sirohi, Jhalawar, Dausa, Dungarpur, Bhilwara, Jaipur, Sawai Madhopur, Barmer, Kota and Baran Districts and at scattered locations in all remaining districts except Ganganagar, Jalore and Sikar districts.

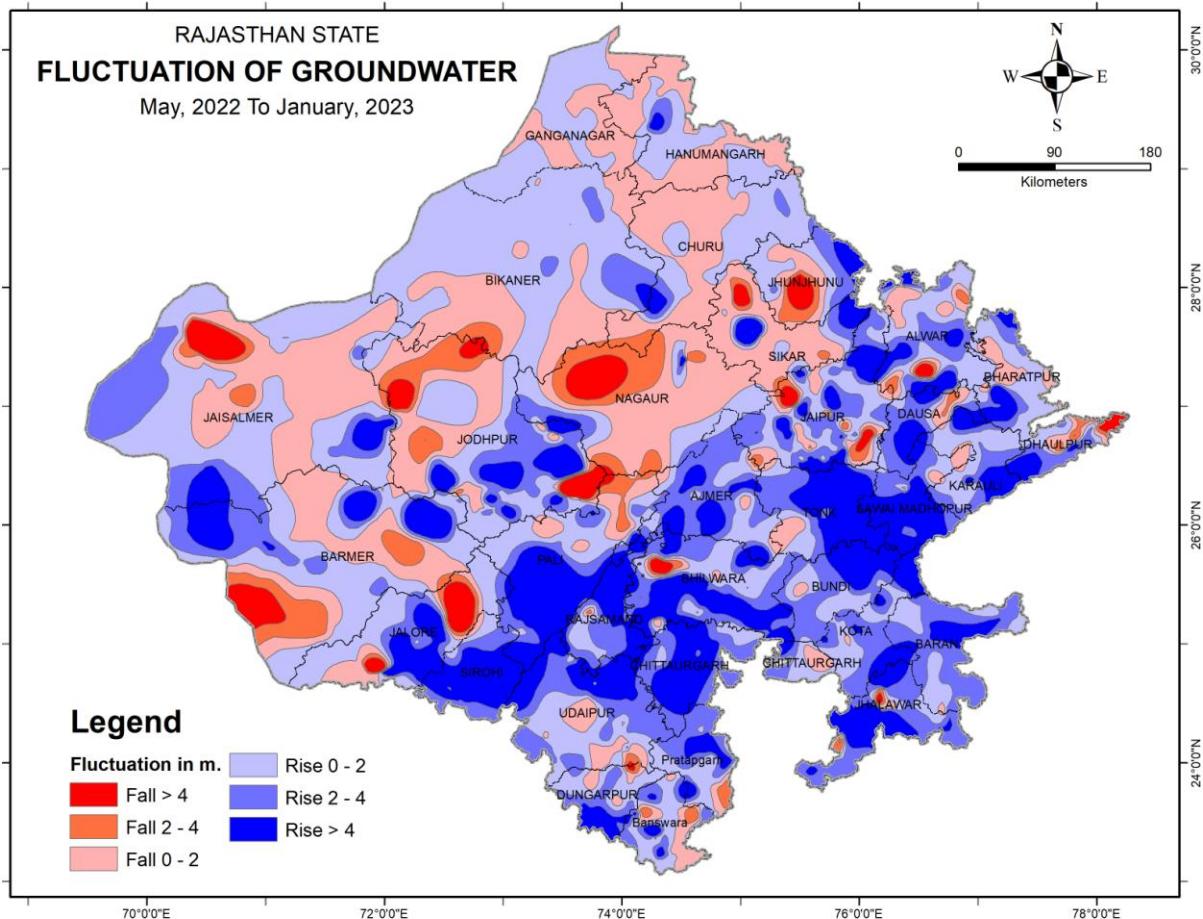

Rise in water level more than 4m has been recorded at 22.0% stations mostly falling in Sirohi, Tonk, Rajsamand, Sawai Madhopur, Jhalawar, Bhilwara, Pali, Jalore, Chittorgarh, Udaipur & Dausa districts and at scattered locations in all remaining districts except Bikaner, Jhunjhunu and Ganganagar Districts.

About 69.71% stations spread in eastern, south western, north eastern & north central parts, shows decline in water level. Minimum & maximum decline was recorded at 0.02 m (Dhanadhan, Sikar district) and 27.00 m (Ghana Magra, Jodhpur district) respectively.

Decline in water level <2m was recorded in 21.80% stations falling mostly in Sikar, Ganganagar, Nagaur, Hanumagarh, Churu, Bikaner, Jaisalmer, Jhunjhunu, Jodhpur, Alwar, Dungarpur and Pali Districts and at isolated locations in all remaining districts except Sirohi, Rajsamand, Dausa and Dhaulpur Districts.

Water level decline between 2 & 4m was recorded at 4.7% stations falling mainly in Nagaur, Dausa, Dhaulpur, Pali, Banswara, Pratapgarh and Alwar districts and at scattered locations in Bharatpur, Jhunjhunu, Sikar, Jodhpur, Barmer, Jaipur, Rajsamand, Jhalawar, Jaisalmer, Bhilwara and Udaipur districts.

Water level decline >4m was shown by 2.6% stations at falling mainly at scattered locations in Dholpur, Jalore, Jhalawar, Jhunjhunu, Jodhpur, Nagaur, Dungarpur, Alwar, Sikar, Bhilwara, Jaipur, Barmer and Jaisalmer districts.

**Figure 17: Water Level Fluctuation – May 2022 to January 2023**

### 7.3 Annual Water Level Fluctuation

Annual Fluctuation in the water levels of the NHS stations during different monitoring periods were analysed graphically and depicted in Figure 18 and Annexure IX to XII shows that mostly fall is dominant over the rise in all annual periods.

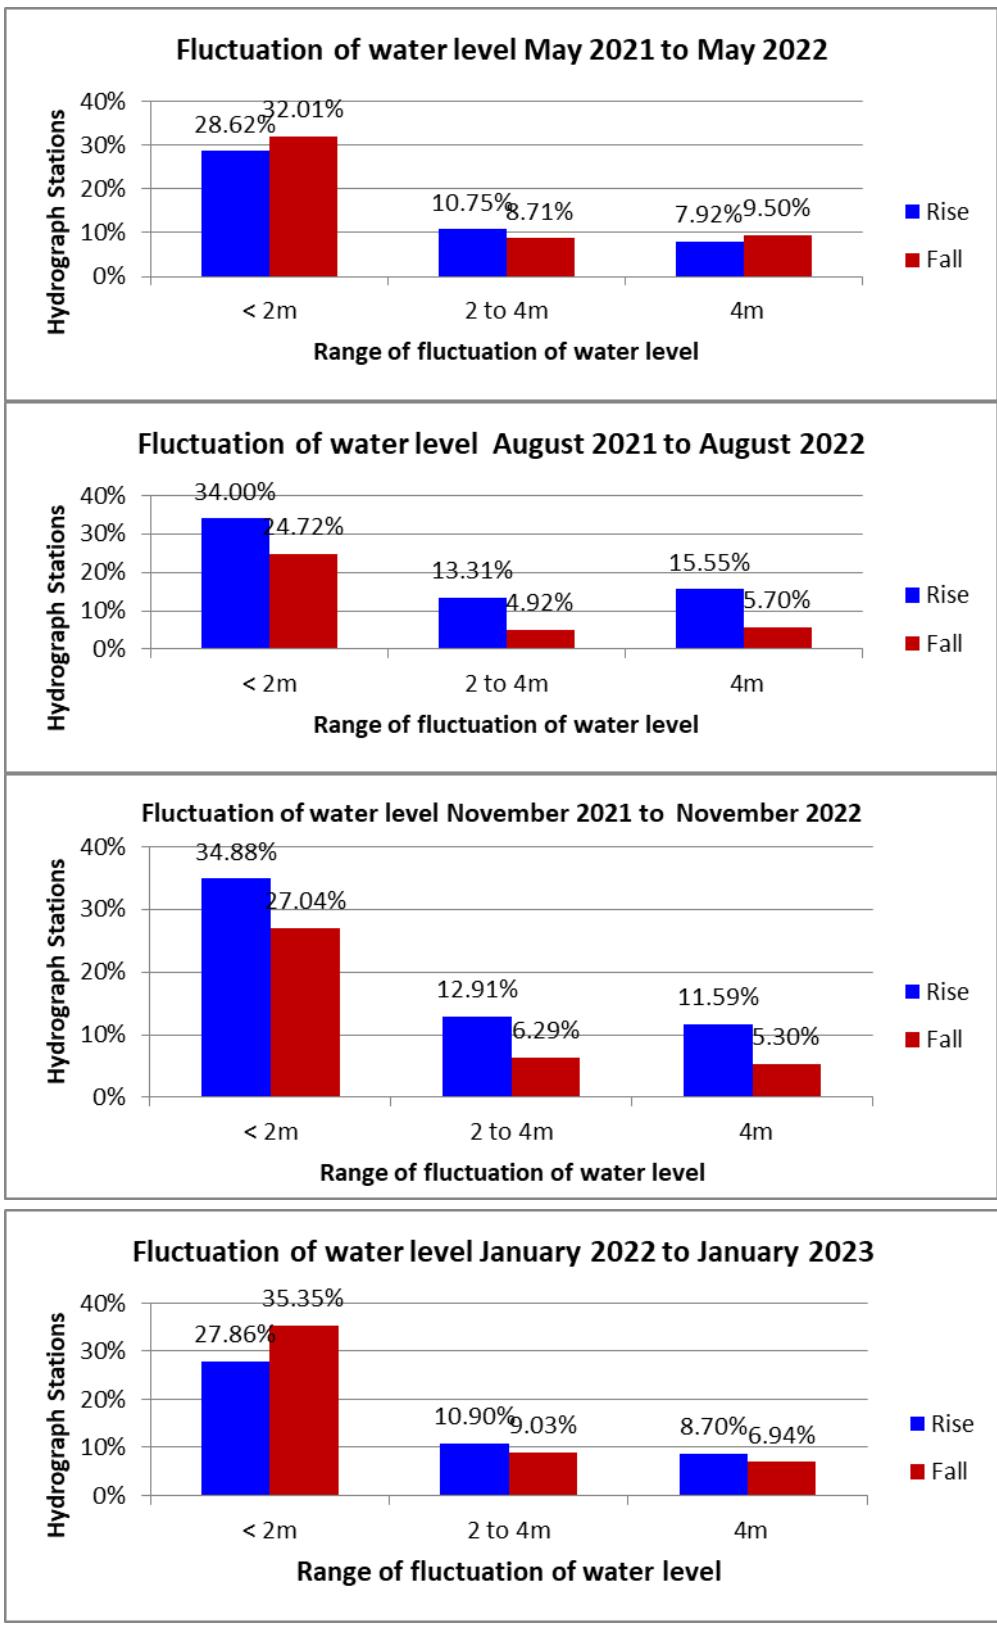

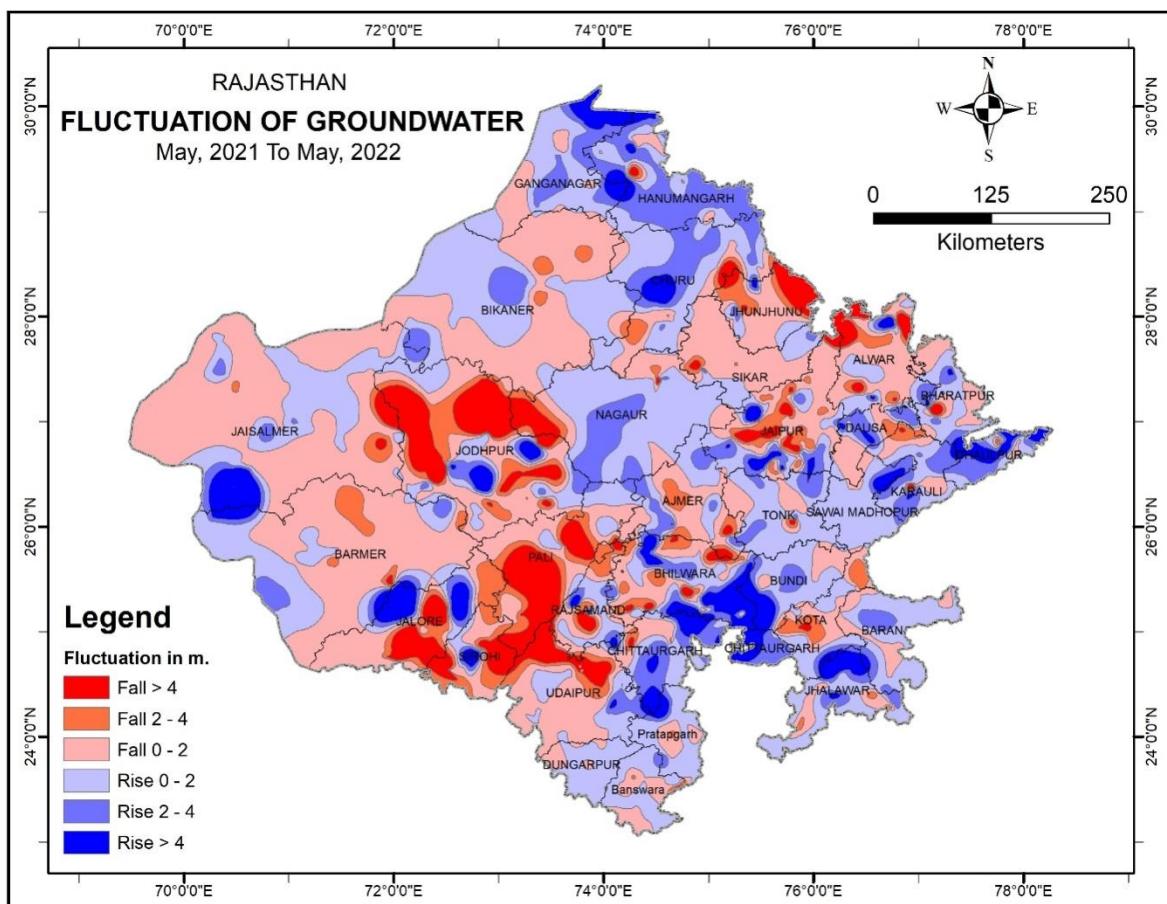

Figure 18: Annual Fluctuation in the water levels - different monitoring periods

### 7.3.1 May 2021 to May 2022

Total number of wells analysed are 884. A perusal of map (Fig-19) of annual water level fluctuation from May, 2021 to May, 2022 reveals that 47.28% stations shown rise, 50.22% decline & 2.49% stations shows no change in water level. Area of rise in water spreads from south east to south-central, north western, western and west central parts of the State. Minimum & maximum rise was recorded 0.02 m in (Dhirera Pz of Bikaner District, Tidiyasar Pz of Churu District and Padampura, Ganganagar District) and 26.40 m (Phulia, Jaisalmer district).

**Figure 19: Water Level Fluctuation – May 2021 to May 2022**

Rise in water level < 2m in 28.6% stations was observed falling mostly in Sawai Madhopur, Banswara, Dungarpur, Pratapgarh, Bundi, Nagaur, Baran, Kota, Churu, Ganganagar, Karauli, Tonk, Jaisalmer, Udaipur, Hanumangarh, Rajsamand and Pali districts and at isolated locations in all the remaining districts except Jalore, Jhunjhunu and Sirohi Districts.

Water level rise between 2 & 4m was shown by 10.7% stations mostly falling in Tonk, Ganganagar, Hanumangarh, Dholpur, Nagaur, Karauli, Chittorgarh Churu Bundi, Baran, Bharatpur, Dausa and Ajmer districts and at isolated patches in Bhilwara, Jhunjhunu, Jaipur, Jhalawar, Barmer, Jalore, Bikaner, , Jaisalmer and Sikar districts.

Rise of more than 4m has been recorded at 7.9% stations falling mostly in Dholpur, Dausa, Chittorgarh, Jhunjhunu, Bhilwara, Bharatpur, Rajsamand Sawai Madhopur, Jaipur, Jhalawar, Jalore, Hanumangarh & Sirohi districts and at isolated locations in Karauli, Alwar, Jodhpur, Ganganagar, Pratapgarh Churu, Ajmer, Jaisalmer, Sikar and Udaipur districts.

About 50.22% stations scattered in all the districts, mostly in north-eastern, south, south weastern, north& north central parts, shows decline in water level during this period. Minimum & maximum decline was recorded at 0.02 m in (Ajagara, Ajmer District) and 35.30 m (Hanuman Sagar, Jodhpur district).

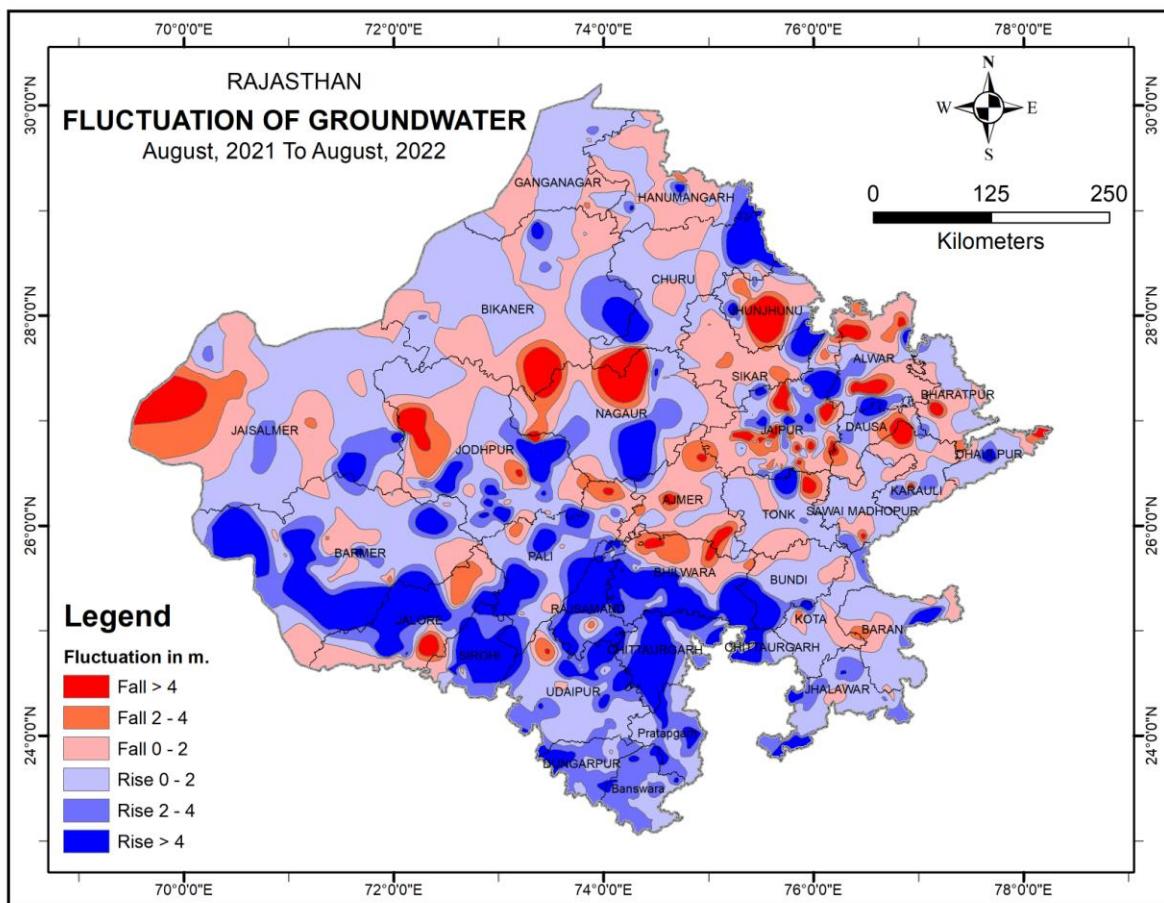

Decline in water level <2m was recorded in 32.0% stations falling mostly in Sikar, Bikaner, Barmer, Sirohi, Jaisalmer, Ajmer, Udaipur, Pali, Baran, Jalore, Jaisalmer, Hanumangarh, Barmer, Jhunjhunu, Ganganagar, Bundi, Bharatpur, Alwar, Jodhpur, Bundi, Jalore, Bhilwara and Dausa districts and at isolated locations in all other districts.

Decline in water level between 2 & 4m was recorded at 8.7% stations at Jhunjhunu, Rajsamand, Jalore, Kota, Udaipur, Dausa and Alwar, Barmer, Jhalawar, Jodhpur, Ajmer, Bhilwara and Sirohi Districts and at isolated locations in Bikaner, Udaipur, Chittorgarh, Nagaur, Sikar, Pratapgarh, Churu and Banswara districts.

Water level decline>4m was exhibited by 9.5% stations at Pali, Sirohi, Jalore, Jodhpur, Alwar Jaipur, Karauli, Rajsamand, Bhilwara, Jhunjhunu and Udaipur Districts and at isolated locations in Dausa, Churu, Chittorgarh, Dholpur, Kota, Nagaur, Tonk, Bharatpur, Ajmer, Jaisalmer, Hanumangarh, Sikar, Barmer, and Banswara districts.

### 7.3.2 August 2021 to August 2022

Total number of wells analysed are 894. A perusal of map (Fig-20) of annual water level fluctuation from August 2021 to August 2022 reveals that 62.86% stations shown rise, 35.34% decline & 1.8% stations shows no change in water level. Area of rise in water spreads from south east to south-central, north western, western and west central parts of the State. Minimum & maximum rise was recorded 0.01 m in (Ramsinghpura of Ganganagar District) and 31.50 m (Paparbar, Bhilwara district).

**Figure 20: Water Level Fluctuation – August 2021 to August 2022**

Rise in water level < 2m in 34.0% stations was observed falling mostly in Bundi, Dhaulpur, Ganganagar, Baran, Pratapgarh, Jaisalmer, Kota, Udaipur, Jhalawar, Sawai Madhopur, Banswara, Chittorgarh, Churu, Tonk, Bharatpur, Sikar and Pali Districts at isolated locations in all the remaining districts except Sirohi District.

Water level rise between 2 & 4m was shown by 13.3% stations mostly falling in Banswara, Dungarpur, Sirohi, Jhalawar, Udaipur, Karauli, Pratapgarh and Nagaur Districts and isolated patches in all other districts except Bundi, Dhaulpur, Baran, Churu, Sikar, Hanumangarh, and Ajmer Districts.

Rise of more than 4m has been recorded at 15.5% stations falling mostly in Rajsamand, Sirohi, Chittorgarh, Bhilwara, Nagaur, Barmer, Dungarpur, Jalore, Pratapgarh, Udaipur, Dausa, Jodhpur and Pali Districts and at isolated locations in all remaining districts except Tonk, Sawai Madhopur, Bharatpur, Ganganagar and Bundi districts. About 35.34% stations scattered in all the districts, mostly in north-eastern, south, south western, north& north central parts, shows decline in water level during this period. Minimum & maximum decline was recorded at 0.01 m in (Sangasar of Churu District, Didwana of Nagaur District, Kumher of Bharatpur District, Lakhusr of Bikaner District) and 30.30 m (Rampuriya Pz of Bhilwara district).

Decline in water level <2m was recorded in 24.7% stations falling mostly in Bikaner Sikar, Bharatpur, Sawai Madhopur, Karauli, Churu, Barmer, Alwar, Baran, Tonk, Jalore Jaipur, Ganganagar, Pali and Kota Districts and at isolated locations in all other districts except Chittorgarh, Pratapgarh, Banswara and Dhaulpur districts.

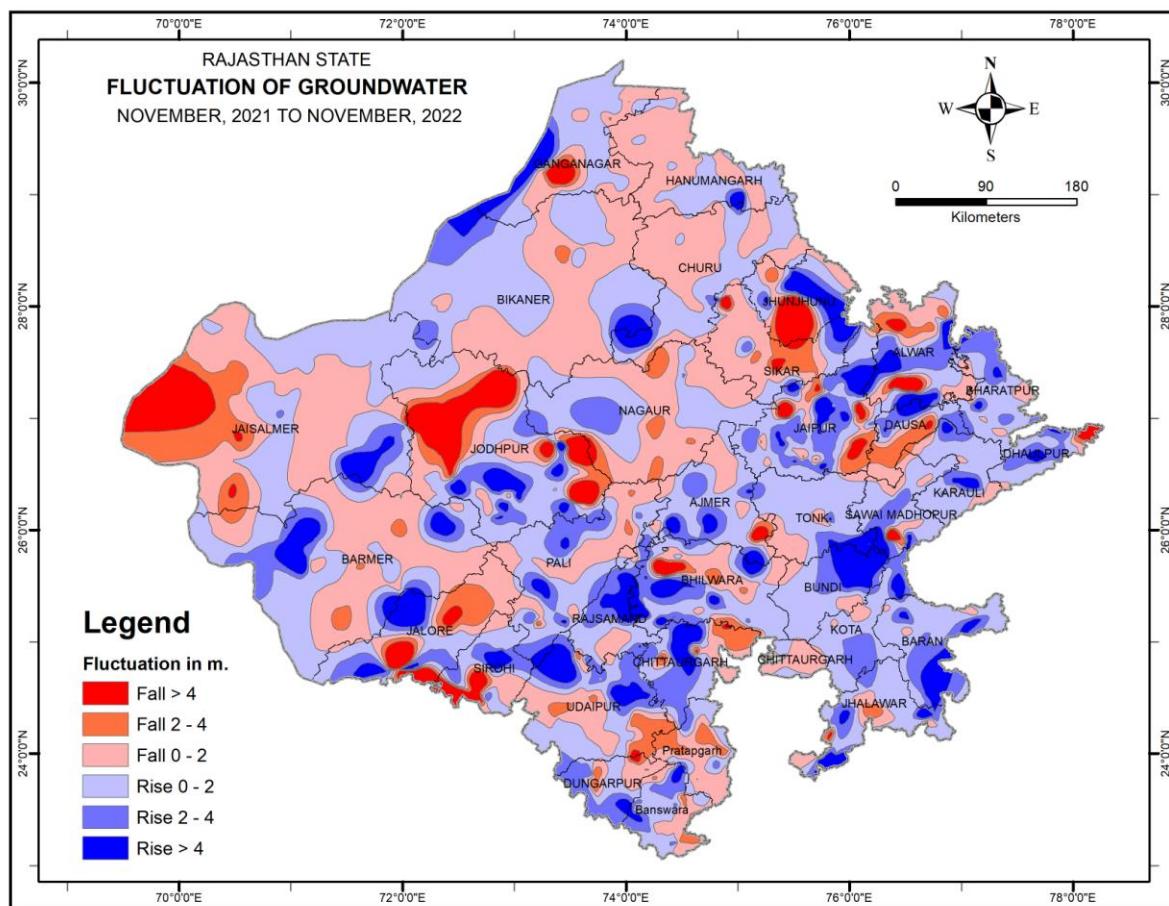

Decline in water level between 2 & 4 m was recorded at 4.9% stations at Dausa, Alwar, Sikar, Jaipur Districts and at isolated locations in Jhunjhunu, Bhilwara, Tonk, Jodhpur, Kota, Baran, Jalore, Pali, Ajmer, Hanumangarh Barmer, Ganganagar and Jaisalmer districts.

Water level decline>4m was exhibited by 5.7% stations at Jaipur, Alwar Jhunjhunu, Karauli and Ajmer Districts and at isolated locations in Dholpur, Jodhpur, Dausa, Tonk, Nagaur, Sawai Madhopur, Jalore, Pali, Bharatpur Jaisalmer, Bhilwara, Barmer, Bikaner and Udaipur Districts.

### 7.3.3 November 2021 to November 2022

Total number of wells analysed are 906. A perusal of map (Fig-21) of annual water level fluctuation from November, 2021 to November, 2022 reveals that 59.38% stations shown rise, 38.63% decline & 1.99% stations shows no change in water level.

Rise is scattered from south east to southern south-eastern, north western, western and west central parts of the State. Minimum & maximum rise was recorded 0.02 m (Aspalsar, Churu district) and 24.84 m (Sop1, Tonk district).

**Figure 21: Water Level Fluctuation – November 2021 to November 2022**

Rise in water level <2m in 34.9% stations was observed falling mostly in Kota, Tonk, Ajmer, Ganganagar, Baran, Churu, Karauli, Bikaner, Dholpur, Jaisalmer, Bhilwara, Jhalawar, Dungarpur, Udaipur, Jhunjhunu, Barmer, Jodhpur, Dausa, Jaipur and Bharatpur Districts and at isolated locations in all the remaining districts.

Water level rise between 2 & 4 m was shown by 12.9% stations scattered in isolated patches only in Dhaulpur, Sirohi, Rajsamand, Sawai Madhopur, Dausa, Bharatpur, Banswara, Jaipur, Chittorgarh, Jhalawar, Kota and Baran Districts and at isolated places in all other districts except Tonk, Ganganagar and Hanumangarh Districts.

Rise of more than 4m has been recorded at 11.6% stations falling mainly in Bundi, Chhitorgarh, Dausa, Jalore, Karauli, Jhunjhunu, Baran, Tonk, Jaipur, Dhaulpur, Sirohi, Jodhpur, Udaipur and Bhilwara Districts and at isolated places in all other districts except Nagaur and Pratapgarh districts.

About 38.63% stations scattered in all the districts, mostly in north-eastern, south, south western, north & north central parts, shows decline in water level during this period. Minimum & maximum decline was recorded at 0.01m (Jaisari, Bharatpur districts) and 17.10 m (Samau Pz, Jalore district).

Decline in water level <2m was recorded in 27.0% stations falling mostly in Hanumangarh, Sikar, Pratapgarh, Bikaner, Churu, Jaisalmer, Barmer, Nagaur, Pali, Alwar, Sawai Madhopur, Bundi, Rajsamand, Bharatpur, Tonk, Jhalawar, Banswara and Karauli Districts and at isolated locations in all the remaining districts except Dausa and Dholpur districts.

Decline in water level between 2 & 4 m was recorded at 6.3% stations mainly in Nagaur, Pratapgarh, Banswara, Udaipur, Alwar, Dungarpur and Sawai Madhopur districts and at scattered locations in Bharatpur, Pali, Jhunjhunu, Barmer, Dausa, Chittorgarh, Jalore, Jaipur, Ganganagar, Jodhpur, Bhilwara, Jhalawar and Bikaner Districts.

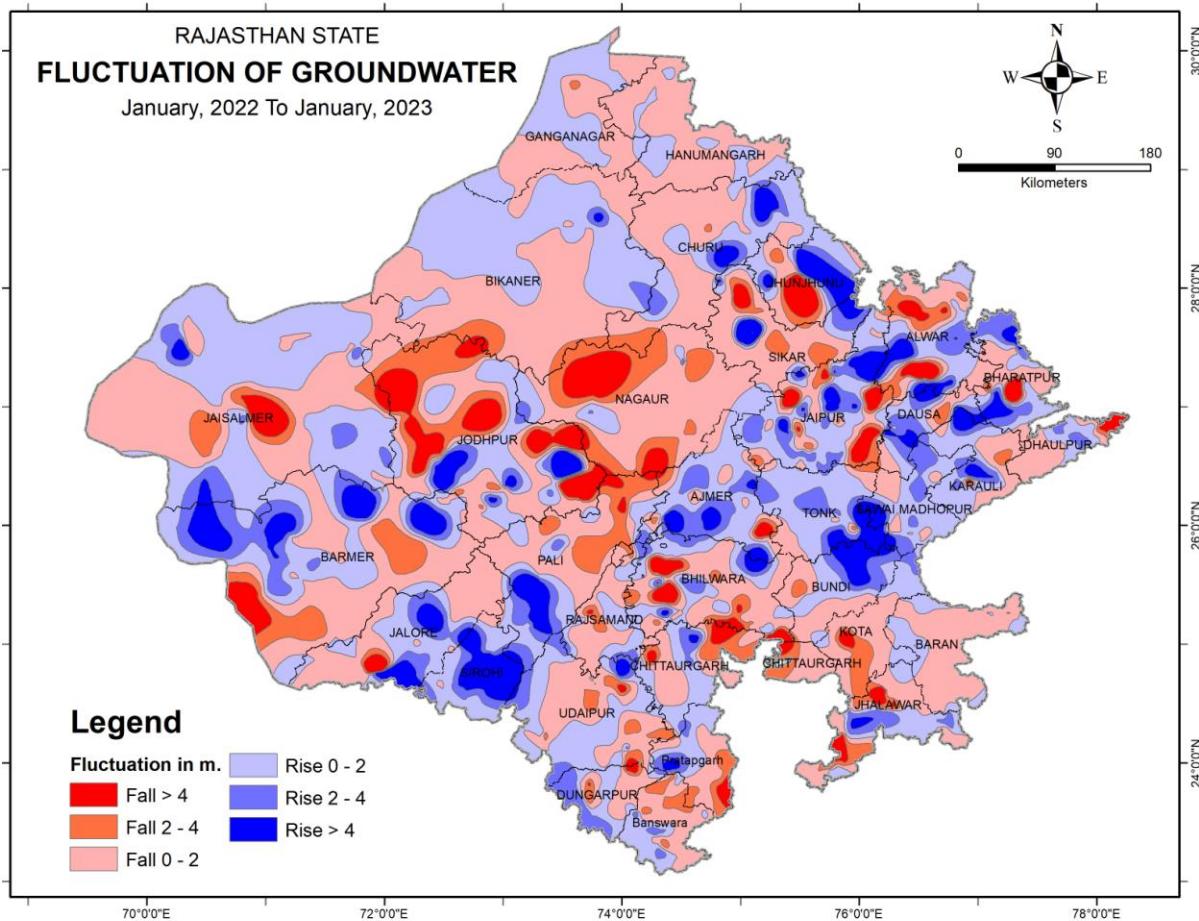

Water level decline>4m was exhibited by 5.3% stations mostly in Chittorgarh Jalore, Sirohi and Jodhpur Districts and at isolated locations in Alwar, Jhunjhunu, Dausa, Dholpur, Jaisalmer, Jaipur, Sikar, Dungarpur, Sawai Madhopur, Pratapgarh, Pali, Bhilwara, Jhalawar, Ajmer, Ganganagar and Udaipur Districts.

#### **7.3.4 January 2022 to January 2023**

Total number of wells analysed are 908. A perusal of map (Fig-22) and Table III of annual water level fluctuation from January, 2022 to January, 2023 reveals that 47.5% stations shown rise, 51.21% decline & 1.22% stations shows no change in water level.

Rise is scattered from south east to south-central, north western, western and west central parts of

the State. Minimum & maximum rise was recorded 0.01m (Raner, Bikaner districts) and 18.8 m (Sargia Kallan, Jodhpur district).

**Figure 22: Water Level Fluctuation – January 2022 to January 2023**

Rise in water level <2m in 27.90% stations was observed falling mostly in Bundi, Sawai Madhopur, Tonk, Ganganagar, Jhunjhunu, Jaisalmer, Bikaner, Udaipur, Hanumangarh, Barmer, Ajmer, Dausa, Sirohi, Dungarpur, Dhaulpur and Banswara Districts and at isolated places in Baran, Karauli, Jaipue, Rajsamand, Kota, Alwar, Pali, Bhilwara, Jalore, Jodhpur and all other remaining districts except Sikar district.

Water level rise between 2 & 4m was shown by 10.9% stations scattered in Ajmer, Dhaulpur, Sawai Madhopur, Tonk, Pali, Jaipur, Rajsamand, Bharatpur, Dausa, Banswara, Bhilwara, Barmer, Jaisalmer and all other districts except Ganganagar, Jhunjhunu, Hanumangarh, Alwar, Pratapgarh and Sikar Districts.

Rise of more than 4m has been recorded at 8.8% stations falling mostly in Sirohi, Dausa, Karauli,

Bharatpur, Tonk, Jalore, Jhunjhunu, Barmer, Alwar Jaipur, Jodhpur Ajmer and Sikar Districts and at isolated places in Pali, Bundi, Chittorgarh, Churu, Nagaur, Pratapgarh, Dungarpur, Bhilwara, Jhalawar, Jaisalmer, Bikaner and Udaipur Districts.

About 51.21% stations scattered in all the districts, mostly in north-eastern, south, south weastern, north & north central parts, shows decline in water level during this period. Minimum & maximum decline was recorded at 0.01m (Bajju (Tejpura), Bikaner, Nangli, Churu and Bhidwall, Ganganagar districts) and 28.50 m (Ghana Magra, Jodhpur district).

Decline in water level <2m was recorded in 35.40% stations falling mostly in Sikar, Hanumangarh, Churu, Baran, Kota, Bikaner, Nagaur, Ganganagar, Chittorgarh, Jalore, Dungarpur, Bhilwara, Pratapgarh, Jhalawar, Udaipur, Dhaulpur, Jaisalmer, Bharatpur, Rajsamand and Jodhpur districts and at isolated locations in all the remaining districts.

Decline in water level between 2 & 4 m was recorded at 8.9% stations mainly in Banswara, Pali, Nagaur, Pratapgarh, Udaipur, Rajsamand, Alwar, Sikar and Jodhpur Districts and at isolated locations in all remaining districts except Hanumangarh, Jalore, Dholpur, Sawai Madhopur & Sirohi districts.

Water level decline>4m was exhibited by 6.9% stations mostly in Jhalawar, Jodhpur, Alwar, Pratapgarh, Chittorgarh, Bharatpur, Nagaur and Dungarpur Districts at isolated locations in all other districts except Bundi, Dausa, Baran, Tonk, Churu, Ganganagar, Bikaner, Hanumangarh, Sawai Madhopur & Sirohi districts

#### **7.4 Decadal Variations**

Decadal Fluctuation in the water levels of the NHS stations during different monitoring periods were analysed graphically and depicted in Figure 22 and Annexure XII to XVI. The figure shows a comparison of the changes of the water levels during different seasons with their respective decadal averages (Appendix II).

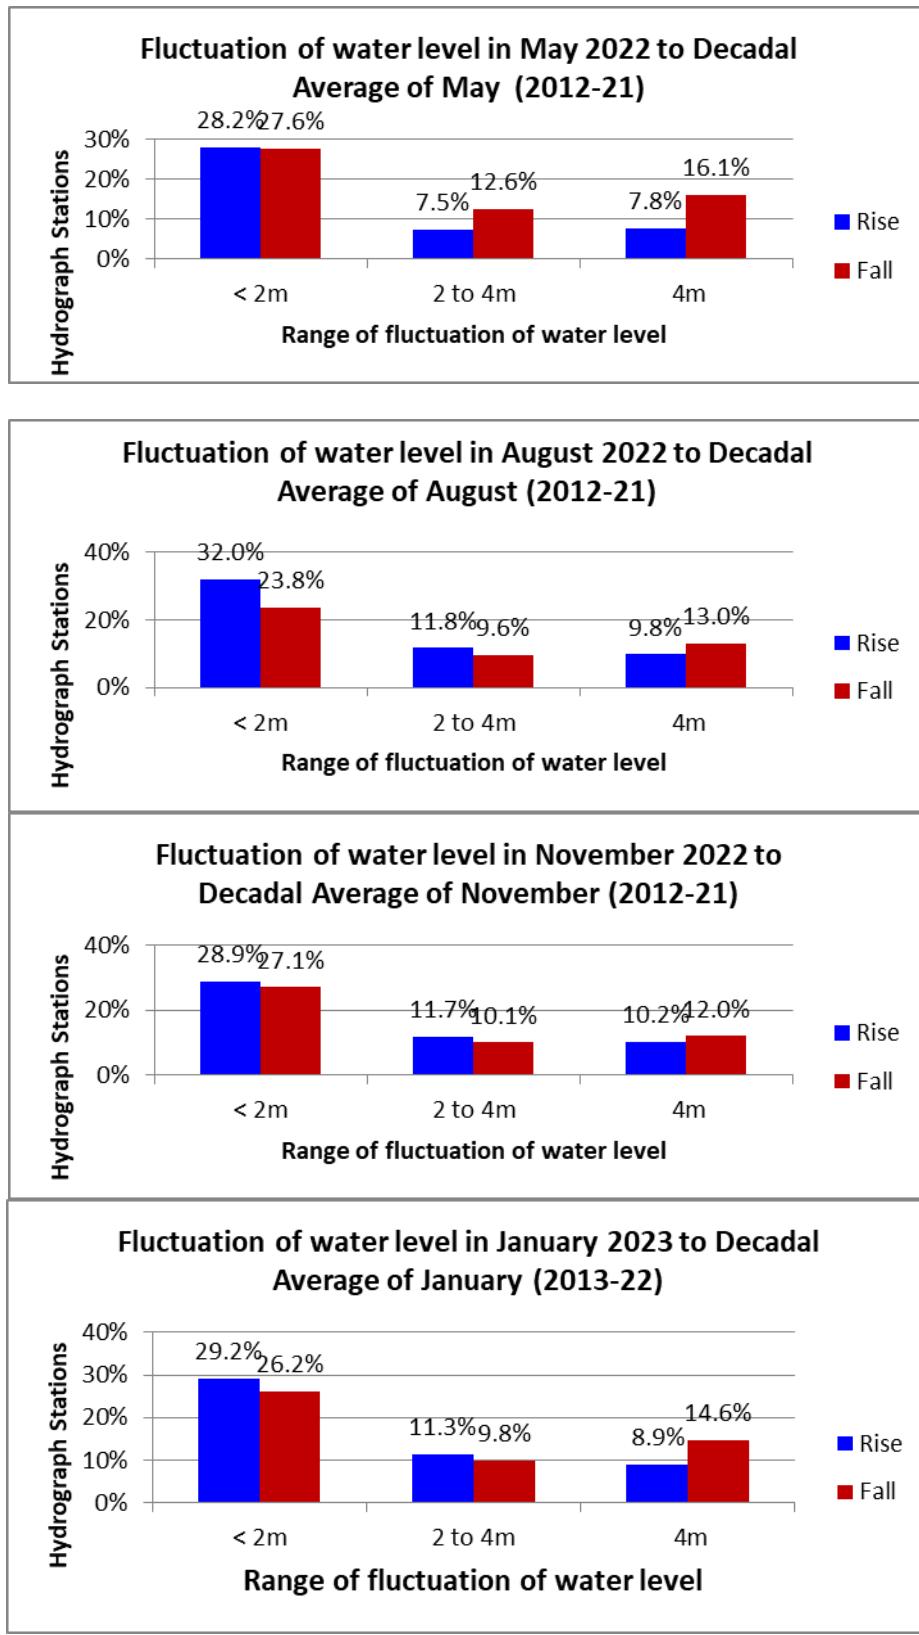

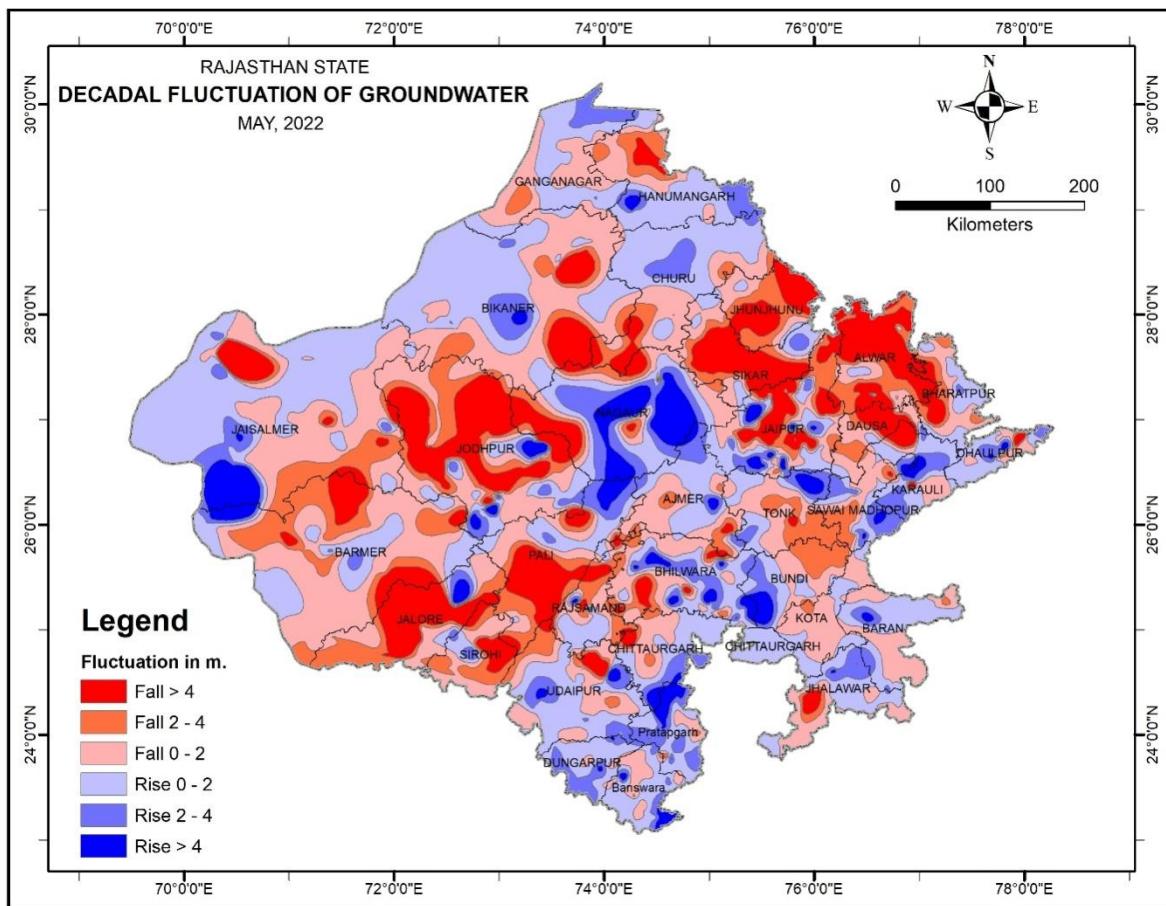

Figure 23: Decadal Water Level Fluctuation

#### 7.4.1 Decadal average of May (2012 - 2021) to May 2022

Total number of wells analysed are 944. Comparison of water level for May, 2022 with that of mean May (2012-21) (Fig-24) infer that water level in 43.53% stations show rise wheras 56.35% shows decline in water level. Rise is mostly in south to south-central, north western, western and west central parts of the State. Minimum & maximum rise was recorded at 0.01m (Sawaipur, Bhilwara District and Sewada, Jalore district) and 30.72 m (Phulia, Jaisalmer district).

**Figure 24: Decadal Water Level Fluctuation –Average May to May 2022**

Rise in water level <2m in 28.2% stations was observed falling mostly in Dungarpur, Banswara, Udaipur, Gangangar, Churu, Baran, Chittorgarh, Pratapgarh, Jhalawar, Bikaner, Jaisalmer, Hanumangarh, Karauli, Bharatpur, Sawai Madhopur, Kota, Bundi and Ajmer Districts and at isolated locations in all the remaining districts except Sirohi district.

Rise in water level between 2 & 4m was shown by 7.5% stations falling mostly in Bundi, Karauli,

Nagaur, Pali, Sawai Madhopur, Banswara, Dungarpur, Pratapgarh and Udaipur districts and at scattered locations in all other districts except Chittorgarh, Kota, Rajsamand, Dausa and Jhunjhunu Districts.

Rise in water level more than 4 m has been recorded at 7.8% stations falling mostly in Nagaur, Pratapgarh, Sawai Madhopur, Bhilwara, Karauli, Dholpur Jaipur & Dungarpur districts and at scattered locations in all other districts except Bundi, Sirohi, Bharatpur, Ganganagar, Churu, Barmer, Sikar, Kota and Jhunjhunu districts.

About 56.35% stations, scattered mostly in eastern, south western, north eastern & north central parts, shows decline in water level. Minimum & maximum decline was recorded at 0.01m (Sardarpura, Ganganagar District and Savina, Udaipur district) and 37.39 m (Azizpur,Karauli district) respectively.

Decline in water level <2m was recorded in 27.6% stations falling mostly in Kota, Sirohi, Bikaner, Jaisalmer, Jhalawar, Dausa, Ajmer, Dholpur, Baran, Ganganagar, Chittorgarh, Tonk, Jalore, Hanumangar, Churu, Bhilwara, Sikar, Jodhpur, Bundi, Barmer and Jhunjhunu and at isolated locations in all the remaining districts

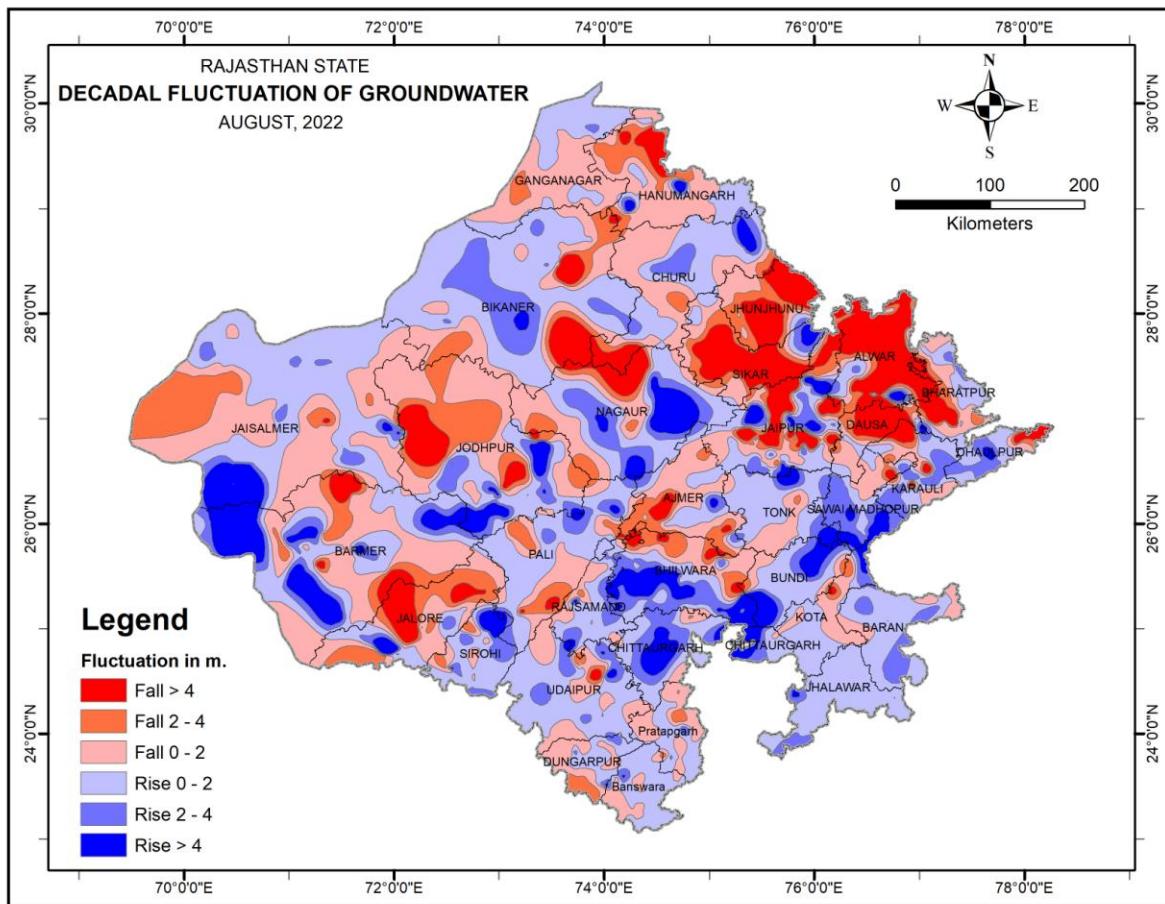

Water level decline between 2 & 4m was recorded at 12.6% stations scattered in Jhunjhunu, Tonk, Barmer, Rajsamand, Bharatpur, Jaipur, Alwar, Hanumangarh, Ajmer, Sirohi, Bundi, Dausa, Jalore Pali, Udaipur, Sawai Madhopur, Churu and Jodhpur Districts and at isolated locations in all the remaining districts except Kota, Jhalawar, Dungarpur, Nagaur and Karauli districts.

Water level decline >4m was shown by 16.1% stations mostly in Alwar, Sikar, Jalore, Jhunjhunu, Jodhpur, Sirohi, Jaipur, Bharatpur, Pali Rajsamand, Nagaur, Barmer, Dausa & Karauli districts and at isolated locations in all the remaining districts except Bundi, Baran, Ganganagar and Dungarpur Districts.

#### **7.4.2 Decadal average of August (2012 - 2021) to August 2022**

Total number of wells analysed are 978. Comparison of water level for August, 2022 with that of mean August (2012-21) (Fig-25) infer that water level in 53.57% stations show rise

wheras 46.42% shows decline in water level. Rise is mostly in south to south-central, north western, western and west central parts of the State. Minimum & maximum rise was recorded at 0.01 m (Goelo, Ajmer District, Bawari Baroda, Bharatpur, Nandor and Dungarpur district) and 43.68 m (Phulia, Jaisalmer district).

**Figure 25: Decadal Water Level Fluctuation –Average August to August 2022**

Rise in water level <2m in 32% stations was observed falling mostly in Jhalawar, Bundi, Banswara, Baran, Dholpur, Tonk, Rajsamand, Pali, Pratapgarh, Kota, Dungarpur, Bikaner, Udaipur, Churu, Gangangar, Jalore, Chittorgarh, Sirohi districts and at isolated locations in all the remaining districts except Jhunjhunu district.

Rise in water level between 2 & 4m was shown by 11.8% stations falling mostly in Chittorgarh, Bhilwara, Sawai Madhopur, Karauli, Dholpur, Sirohi Udaipur, Baran, Nagaur, Bikaner and

Jaisalmer districts and at scattered locations in all other districts except, Bundi, Dausa, Sikar and Jhunjhunu Districts.

Rise in water level more than 4 m has been recorded at 9.8% stations falling mostly in Bhilwara, Nagaur, Sawai Madhopur, Jodhpur, Barmer and Chittorgarh districts and at scattered locations in all other districts except Baran, Pratapgarh, Bharatpur, Ganganagar and Jhunjhunu districts.

About 46.42% stations, scattered mostly in eastern, south western, north eastern & north central parts, shows decline in water level. Minimum & maximum decline was recorded at 0.01m (Banthoni, Baran District, Soder Ki Dhani District, Jodhpur, Borana of Jaisalmer District and Kapren of Bundi District) and 40.10m (Azizpur,Karauli district) respectively.

Decline in water level <2m was recorded in 23.8% stations falling mostly in Ganganagar, Jhunjhunu, Barmer, Churu, Jaisalmer, Ajmer, Kota, Dungarpur, Tonk, Jodhpur, Udaipur, Banswara, Bharatpur, Rajsamand and Sikar Districts and at isolated locations in all the remaining districts.

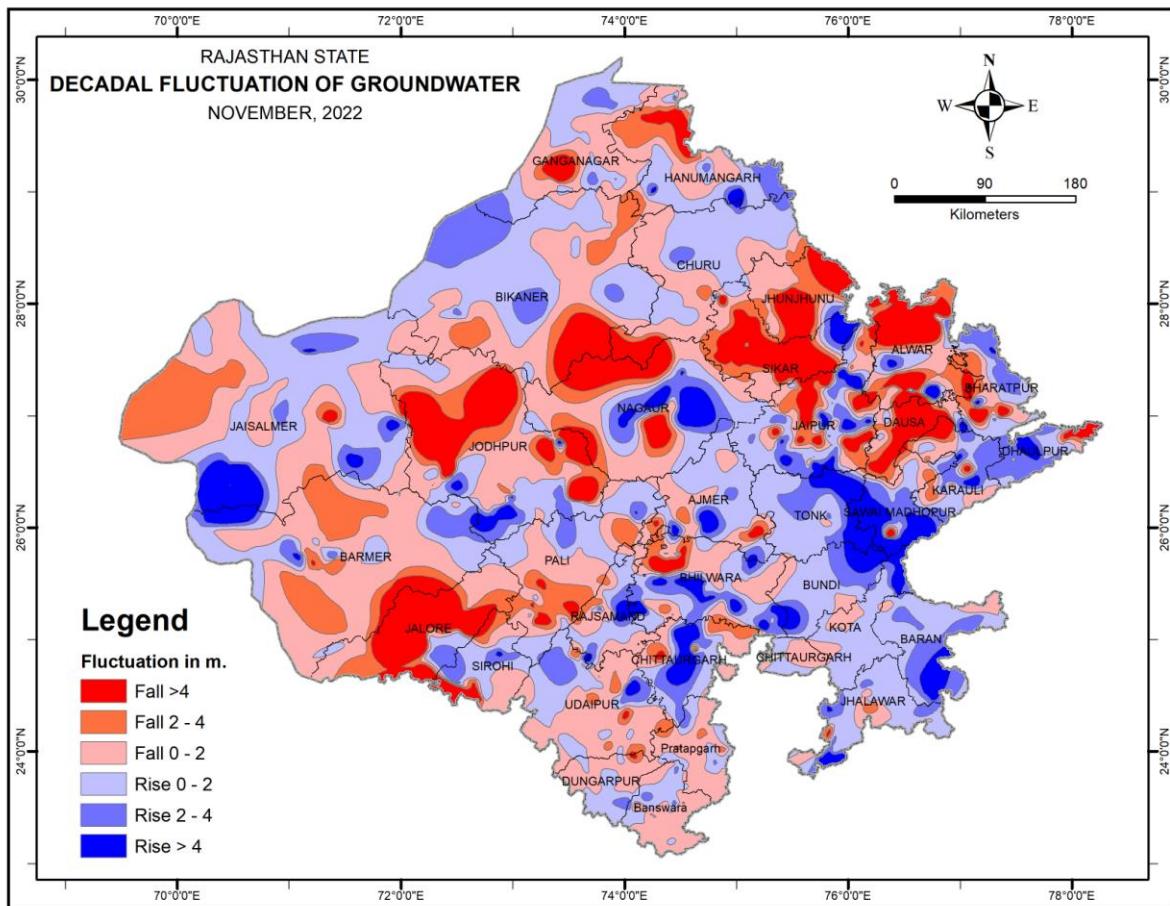

Water level decline between 2 & 4m was recorded at 9.6% stations scattered in Jhunjhunu, Hanumangarh, Ajmer, Pali, Sikar and Pratapgarh districts and at isolated locations in all the remaining districts except Baran, Sawai Madhopur, Karauli, Bundi, Dausa, Dholpur and Jhalawar districts.

Water level decline >4m was shown by 13.0% stations mostly in Alwar, Dausa, Sikar, Bharatpur, Karauli and Jaipur dsitircts and at isolated locations in all the remaining districts except Sirohi, Dungarpur, Ganganagar, Churu Tonk, Banswara, Chittorgarh, Bundi, Baran and Jhalawar Districts.

#### **7.4.3 Decadal average of November (2012 - 2021) to November 2022**

Total number of wells analysed are 964. Comparison of water level for November, 2022 with mean of November (2012-21) (Fig-26) infer that water level in 50.82% stations show rise whereas 49.17% decline and 0.01% shows no change in water level. Rise is mostly in western, north western, central, eastern and south-central parts of the State. Minimum & maximum rise was recorded at 0.02 m (Jaitsar, Ganganagar district and Bhagatpura, Hanumangarh District) and

45.20 m (Phulia, Jaisalmer district).

**Figure 26: Decadal Water Level Fluctuation –Average Nov to Nov 2022**

Rise in water level <2m in 28.9% stations was observed falling mostly in, Kota, Baran Tonk Churu Jhalawar, Pali, Ajmer, Rajsamand, Jaisalmer Dholpur, Sirohi, Ganganagar, Jodhpur, Bikaner, Udaipur Districts and at scattered places falling in all the remaining districts except Chittorgarh and Jhunjhunu districts.

Rise in water level between 2 & 4m was shown by 11.7% stations mostly in Bharatpur, Bundi, Baran, Tonk, Karauli, Dholpur, Jhalawar, Jaipur, Dausa Sawai Madhopur and Chittorgarh districts and at scattered locations in all the remaining districts except, Kota, Nagaur, Alwar, Sikar and Jhunjhunu Districts.

Rise in water level more than 4m has been recorded at 10.2% stations falling mostly in Sawai

Madhopur, Chittorgarh, Nagaur, Dholpur, Bhilwara, Tonk Jaipur, Karauli, Alwar, Sirohi, Ajmer, Kota and Jodhpur districts and at scattered locations in Udaipur, Jaisalmer, Hanumangarh, Bharatpur, Jhalawar, Sikar, Dausa, Baran, Pali, Rajsamand and Barmer districts.

About 49.17% stations, scattered mostly in eastern, south western, north eastern & north central parts, shows decline in water level. Minimum & maximum decline was recorded at 0.01m (Rawatsar, Barmer, Moolasagar, Jaisalmer, Kolia Pz, Nagaur, Karpen, Bundi, Akola, Chittorgarh and Bhilwa, Dungarpur Districts) and 30.77 m (Azizpur, Karauli district) respectively.

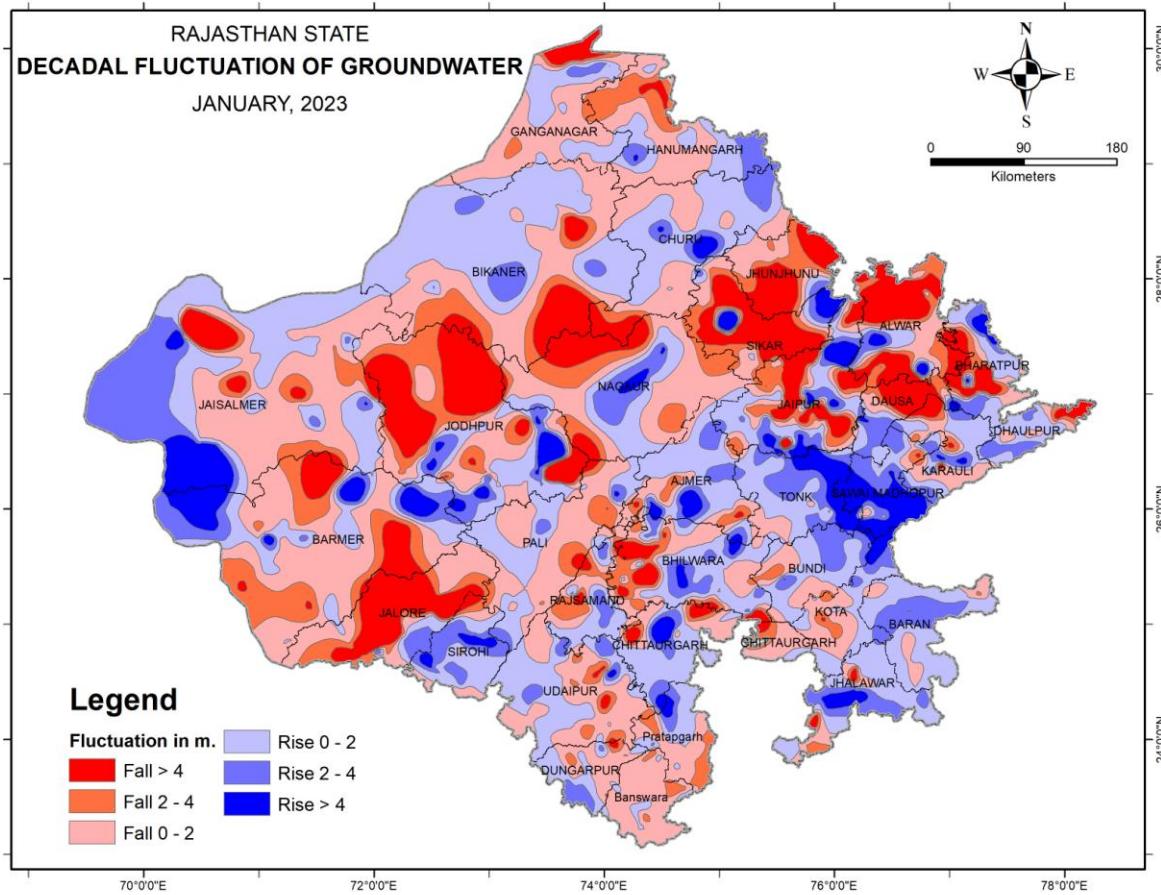

Decline in water level <2m was recorded in 27.1% stations falling mostly in Jhunjhunu, Pratapgarh, Banswara, Dungarpur, Barmer, Bundi, Ganganagar, Nagaur, Churu, Bikaner, Jaisalmer, Rajsamand, Kota, Udaipur, Ajmer, Bhilwara, Hanumangarh, Sikar, Pali and Jalore Districts at isolated locations in all the remaining districts.

Water level decline between 2 & 4m was recorded at 10.1% stations mostly at Karauli, Jalore, Barmer, Alwar, Hanumangarh Chittorgarh, Jhunjhunu and Sikar Districts and at isolated locations in all the remaining districts except, Bundi, Kota, Nagaur, Baran, Dausa, Dholpur and Tonk Districts

Water level decline >4m was shown by 12.0% stations mostly in Sikar, Dausa, Alwar, Jalore, Pali, Jodhpur, Bharatpur, Chittaurgarh, Nagaur, Jaipur, and Hanumangarh, districts and at isolated locations in remaining districts except Churu, Banswara, Kota, Bundi, Baran and Tonk districts.

#### **7.4.4 Decadal average of January (2013 - 2022) to January 2023**

Total number of wells analysed are 963. Comparison of water level for January, 2023 with mean of January (2013-22) (Fig-27) infer that water level in 49.63% stations show rise whereas 50.31% decline in water level. Rise is mostly in south to south-central, north western, western and west central parts of the State. Minimum & maximum rise was recorded at 0.01 m (Jansingh Ki Beri, Barmer district) and 19.19 m (Sargia Kallan, Jodhpur district).

**Figure 27: Decadal Water Level Fluctuation –Average Jan to Jan 2023**

Rise in water level <2m in 29.1% stations was observed falling mostly in, Bundi, Churu, Baran, Bharatpur, Jhalawar, Ajmer, Ganganagar, Bikaner Kota, Barmer, Tonk, Pali and Pratapgarh Districts and at scattered places falling in all the remaining districts except Jhunjhunu District.

Rise in water level between 2 & 4 m was shown by 11.3% stations mostly in Dhaulpur, Sirohi, Sawai Madhopur, Tonk, Rajsamand, Baran, Kota, and Bhilwara Districts and at scattered locations in all the remaining districts except Churu, Banswara, Sikar and Jhunjhunu Districts.

Rise in water level more than 4m has been recorded at 9.1% stations falling mostly in Sawai Madhopur, Sirohi, Tonk, Jaipur, Nagaur, Dausa, Jodhpur, Ajmer, Chittorgarh, Karauli, Churu, Barmer and Sikar Districts and at scattered locations in Dhaulpur, Rajsamand, Dungarpur, Bikaner, Pratapgarh, Jalore, Ganganagar, Banswara and Jhunjhunu Districts.

About 50.31% stations, scattered mostly in eastern, south western, north eastern & north central parts, shows decline in water level. Minimum & maximum decline was recorded at 0.02m (Sribhadria, Jaisalmer district) and 28.37m (Khara, Jodhpur district) respectively.

Decline in water level <2m was recorded in 26.2% stations falling mostly in Banswara, Pali, Jhunjhunu, Ganganagar, Churu, Jaisalmer, Dungarpur, Hanumagarh, Udaipur, Bikaner, Nagaur, Jalore, Barmer, Chittorgarh, Jodhpur, Bhilwara and Pratapgarh and at isolated locations in all the remaining districts.

Water level decline between 2 & 4m was recorded at 9.9% stations mostly at Pratapgarh, Jhunjhunu, Dungarpur, Rajsamand, Hanumagarh, Banswara & Udaipur districts and at isolated locations in all the remaining districts except Tonk, Churu, Sawai Madhopur & Sirohi Chittorgarh and Dausa districts.

Water level decline >4m was shown by 14.5% stations mostly in Alwar, Sikar, Dausa, Jalore, Bharatpur, Jaipur, Jhunjhunu and Jodhpur districts and at isolated locations in all the remaining districts except Bundi, Baran, Churu, Tonk and Sirohi Districts.

## **8. Conclusions and Recommendations**

The National Hydrograph Monitoring Network was established by CGWB more than 40 years back. Though, it has been progressively strengthened during the period, but now, most of the monitoring stations have gone dry and are not in use. Therefore, these are neither representative nor ideal for getting the full and dependable information on resource behaviour and regime monitoring. Even though 558 purpose-built stations have been established, but still, the number is rather too meagre keeping in view the size of the state and the changing ground water levels and quality regime scenario. The network thus needs to be strengthened with construction of purposebuilt stations for monitoring of water level and water quality in vulnerable areas like the industrial zones, mining & smelting complexes and urban agglomerates.

Dugwellis being replaced by construction of Piezometers in the area where the dug wells have gone dried due to incessant declining of water level attributed by more ground water draft than its natural monsoon recharge, to have vigil on ground water regime in context of ground water development.

There is progressive increase in ground water draft due to increasing population, urbanization and industrialisation. Out of 295 blocks and 7 urban areas (3 blocks are saline), as many as 219 blocks the draft has exceeded the estimated replenishable resource. In 22 blocks, the stage of development has reached Critical levels in 20 blocks and semi critical levels in 38 blocks (Ground water resource estimation 2022) leaving only 37 blocks in safe category. Any further increase in the draft will aggravate the already worsened situation of declining water levels and/or degrading water quality in some areas.

Substantial ground water level declines are being witnessed both in hard rock and alluvial areas. Contamination in ground water may be due to industrial and sewage disposal activities. The ground water development in such areas therefore needs to be regulated through suitable measures to provide sustainability and protection to ground water reservoir.

Planning for the development and management of ground water in any area in the state must address the factors like low rainfall, limited ground water storage availability, ground water salinity in many areas, deep water levels in most of western parts of state and desertic conditions in nearly 50% of the state's area. These aspects should be taken as a core consideration for planning and implementing ground water development and management programmes. A holistic approach taking all aspects into consideration shall therefore, need to be adopted.

Artificial recharge of ground water by arresting storm water run-off during monsoon seasons should be the policy directive in all areas with ground water draft more than 90% of the assessed replenishable resource or areas where decline, either in the pre monsoon or post monsoon water levels is observed or the areas where adequate storage capacity is available. The following specific measures will improve the situation and help lessen the stress on the system.

- In areas where the situations of over-draft are manifested in declining water levels, action to reduce the draft by at least 20% must be taken as an immediate measure. The impact of reduced draft should be monitored over 2-3 years to enable development of a scientifically based long-term management strategy.
- An adequate storage capacity is available in the aquifer system where water level during pre monsoon period is less than 10m bgl. Therefore, the underground storage of additional water in those areas will not only ensure the availability of water during dry season but also reduce the evaporation losses.
- Paving of surface for providing civic amenities in the towns & cities has led to reduced infiltration and increased run-off during the rainy season. Rainwater harvesting structures should therefore be constructed to intercept and recharge the roof-top run-off from individual house-holds in feasible areas. Local municipal bodies should encourage such a provision.
- Concurrent with the above measures the work of impounding and recharging the storm water run-off from other sources may be adopted. Suitable locations in nals & gullies should be utilised for the construction of check-dams, sub-surface dams, ponds etc. for ensuring stagnation of water & thus its infiltration underground for augmenting ground water storage. Such structures must be located and designed keeping in full view Geology, Geomorphology and Hydrogeological set-up prevailing in the area.
- Re-use and recycling of urban wastewater should receive added attention of municipal bodies. The liquid urban wastes can be recycled through aquifers to improve their quality and pumped out for reuse particularly for irrigation. It shall however, be

essential to ensure that urban & industrial wastes are not inter-mixed. Where such a situation exists, the industrial wastes must be treated before disposal to remove the toxic elements. After primary treatment the liquid urban wastes can also be used for direct irrigation in suitable areas. It will reduce the dependence on ground water to some extent and shall also ensure conservation and use of the wastewater, which is otherwise lost to evaporation.

- To reduce dependence of ground water, measures aimed at affecting economy in water use be implemented. These could include installation of new small capacity cisterns in toilets and other household means of saving water, use of improved irrigation systems like sprinkler and drip, etc. Wherever feasible, metering of water and charging of economic costs, relocating high water-use industries to surplus water available areas, etc. should be undertaken.
- In the canal command areas of IGNP, Chambal, Mahi and other surface irrigation systems, the menace of water-logging has been increasing rapidly. Improved irrigation practices, change in cropping pattern with controlled water supplies from canals coupled with mandatory development of ground water at least 50% of the water requirements are urgently called for in such areas. For promoting ground water development, subsidies should be provided. Any further delay will result in large areas going out of agriculture and / or reduction in farm output besides degradation of the environment and eco-system of the area.
- Instances of growing levels of nitrates in ground water are noticed due to haphazard disposal of wastes, particularly faecal disposals in urban areas. Educating public regarding the maintenance of hygiene and installation of organized sewerage system are the need of the hour to reduce these hazards.
- Disposal of solid wastes in natural or man-made depressions without adequate scientific considerations is bound to pollute ground water in due course. As a measure of precaution, it is therefore essential that solid wastes from major cities and towns should be disposed off in scientifically located and designed sites/ structures for recycling and reuse. Detailed investigations to locate such sites must be initiated urgently.

- An unsystematic release of industrial waste without pre-disposal treatment is causing deterioration of ground water quality. For example, in Jaipur, the liquid waste from the cloth printing & dyeing industry is leading to an increase in fluoride content in ground water. Urgent measures including awareness and if need be, punitive action may have to be taken up to stop further degradation in the quality. Also, Ground water pollution has become a serious problem due to dyeing & printing industry in Balotra, texture industry in Pali and dyeing & processing industry in Bhilwara areas. Central Ground Water Authority and Pollution Control Boards may consider suitable actions, both preventive and remedial, and drawing up of long-term plans in this regard.
- Since ground water abstraction structures are individually owned, operated and managed, it is difficult to have an account of ground water abstraction by volume. Voluntary registration of structures needs to be encouraged so as to obviate the requirement for enactment and enforcement of any legal measures.
- Whereas restrictions must be laid on the construction and energization of individually owned structures for drinking and domestic use with a view to avoid wastage of water, but also, adequate supply from municipal water supply system shall have to be ensured in such areas. Also, Ground water markets will have to be regulated.
- Keeping in view rapidly declining ground water trend, Public Interaction Programme is being organized on priority in NAQUIM areas since Ground water development is a 'People's programme'. Therefore, education and involvement of people in its management projects including development, conservation, protection and augmentation will be the prime requisite to protect resource against quality degradation and guarantee quality assurance. Mass awareness programmes aimed at educating the users regarding the adverse effects of over-exploitation of ground water on its quality & quantity, economic and efficient use of water, voluntary regulation of abstraction, etc. will ensure utilisation of the resource at optimal levels.

## CATEGORISATION OF DEPTH TO WATER LEVEL - MAY 2022

District	No of well analysed	DTWL mbgl		No of well in different Ranges					
		Min	Max	0 to 2 (m)	2 to 5(m)	5 to 10(m)	10 to 20(m)	20 to 40(m)	>40(m)
