EXECUTIVE SUMMARY

Central Ground Water Board, Central Region, Nagpur monitors ground water levels through a network of about 1783 Ground Water Monitoring Wells (GWMW) spread over the entire State of Maharashtra and the Union Territory of Dadra & Nagar Haveli four times in a year (August, November, January, and May). The present report gives an overview of the status of ground water levels in different parts of Maharashtra and Dadra and Nagar Haveli during the monsoon period (August 20th -31st, 2015). During the monitoring, 1649 GWMW including 1465 dug wells and 184 piezometers were monitored in the state of Maharashtra and UT of Dadra & Nagar Haveli. The monitoring of ground water regime during the period of August is important in order to assess the status of natural replenishment and also ground water levels during the Kharif season. The following sections briefly summarise the data presented in this report.

During August 2015 depth to water level (DTWL) in unconfined aquifer (Dug well) ranges from near ground level (0.00 m bgl) to 51.40 m bgl. The water level near ground level is seen in isolated locations at Sakoli (Bhandara), Dahegaon-Pz (Gondia), Siphora (Jalna), Hingna-Raipur Pz, Sivani (Nagpur), Hudhre Bk, Karjat, Vadkhal (Raigadh) and Bhaindarpada, Katolwadi (Mulgaon), Murbad, Padghe-1, Pasheri (Thane); while deepest DTWL were observed at Faizpur (51.40 m bgl), Jalgaon and Dhadgaon (49.60 m bgl), Nandurbar. Depth to water level in semi-confined and confined aquifer (Bore well/ tube well/ piezometer) were observed at Atali, Buldhana (1.60 m bgl) & Morwa, Chandrapur (1.59 m bgl); while deepest DTWL were observed at Shetphal & Uplai (50.00 m bgl), Solapur district.

Water levels less than 2 m bgl is observed in 24 % of wells covering about 39,125 sq. km. area. About 28 % of wells covering about 89,305 sq. km. area show water levels between 2 and 5 m bgl. About 30 % of wells covering about 1,23,821 sq. km. area show water levels between 5 and 10 m bgl. Deeper ground water levels, ranging from 10 to 20 m bgl are observed in 15 % of wells covering about 51,806 Sq km areas mostly in northern part of Maharashtra in Tapi and Purna River basins in Nandurbar, Dhule, Jalgaon, Buldhana, Akola and Amravati districts and isolated patch are also observed in Marathwada districts, Khandesh. Ground water levels of more than 20 m bgl covering about 2,404 sq. km. area are generally noticed in 3% of wells (about 3,128 sq. km) in parts of Jalgaon, Akola, Amravati and Nandurbar, Nashik, Osmanabad, Latur, Parbhani, Buldhana & Nanded districts. In UT of Dadra and Nagar Haveli, 63% of well shows water level ranging from 0.75 to 9.30 mbgl, 50 % of well shows water level less than 2; about 38 % wells were showing 2 to 5 m bgl while 12 % wells were showing water level ranging from 5 to 10 m bgl.

The ground water levels during August 2015 have been compared with those of August 2014, May 2015 and the Decadal mean (2005-2014) of August water levels. It has been observed that the DTWL has risen with respect to May-2015 which is a natural phenomenon. However, the significant fall in DTWL as compared to August 2014 has been observed in entire Maharashtra except parts of Raigad and Vidarbha. Likewise, when compared with the decadal mean significant fall in DTWL has been observed in about 61 % of wells (2,33,307 sq. km. area) covering major parts of Marathwada, Khandesh region, eastern & western Vidharbha and isolated patched observed in most of the districts. These areas are prone to water scarcity in winter 2015 onwards till June 2016 especially Marathwada region where scanty rainfall (-66 to -70) to deficient rainfall (upto -59%) has occurred.

STATUS OF GROUND WATER LEVELS IN MAHARASHTRA AND UT OF DADRA & NAGAR HAVELI DURING AUGUST 2015

I. INTRODUCTION AND RAINFALL ANALYSIS

Central Ground Water Board (CGWB) monitors ground water levels all over the country four times a year in order to bring out spatial and temporal changes in the ground water regime. This continuous monitoring provides a valuable tool to decipher the seasonal and long term changes in ground water levels and in turn helps in managing the ground water resources in a more scientific and effective manner.

The Central Regional office of CGWB at Nagpur monitors about 1783 Ground Water Monitoring Wells (GWMW) established in the State of Maharashtra and the Union Territory of Dadra & Nagar Haveli. These stations are monitored four times in a given hydrological year during the months of August (Kharif), November (post-monsoon), January (end of Rabi) and May (pre-monsoon). The long-term data generated during these monitoring seasons are important for computation, comparison and analysis of ground water utilization and its availability.

The present report provides an analysis of the ground water levels during August 2015 and the same has been compared with those of August 2014, May 2015 and the Decadal (2005-2014) mean of the August water levels. During the August 2015 monitoring, 1649 GWMW were monitored which includes 1465 dug wells and 184 piezometers spreading over entire Maharashtra and UT of Dadra & Nagar Haveli. The district-wise status of GWMW is presented in **Table 1**. The monitoring of ground water regime during the period of August is particularly important in order to decipher the status of ground water levels during the Kharif season. Further, the availability of ground water during the post-monsoon period depends on the extent to which the recharge has taken place due to monsoon rains. As such, the August monitoring of ground water regime has special significance in ascertaining the ground water resources availability during the Rabi season.

Table 1. District-wise Status of Ground Water Monitoring Wells in Maharashtra and UT of DNH during August-2015

Wells not Monitored# due to various reasons like well not approachable, lock jam, outside water added, well filled up, well fitted with pump, disturbed law & order conditions etc.

The departure of monsoon rainfall from normal rainfall for the period 1st June 2015 to 30th August 2015 is presented in **Plate I** as per the IMD, RMC, Mumbai for 34 districts of Maharashtra. It indicates that Vidarbha region has received normal rainfall while rest of Maharashtra has received deficit rainfall (Table 1a).

The district wise rainfall (1st June 2015 to 3rd August 2015) data analysis (Table 1b) indicates that only Satara district has received +8 % departure i.e., in Normal rainfall while Beed (-69), Latur (-68), Osmanabad (-66) and parbhani (-70) has received Scanty rainfall. Rest of the Maharashtra has deficit rainfall except Amravati, Bhandara, Gondia, Chandrapur, Nagpur, Wardha, Dhule, Nashik, Nandurbar, Thane and Mumbai. The UT of DNH has also received deficient rainfall (21%).

Table 2a: Region wise percentage departure of rainfall wrt to normal rainfall (upto 30/8/15) (After IMD)

II. DEPTH TO WATER LEVEL DURING AUGUST 2015

The **Annexure I and II** give the depth to water level ranges of unconfined, semi/confined aquifers tapping dug wells, bore wells, tube wells, and piezometers in all the districts of Maharashtra and the Union Territory of Dadra and Nagar Haveli. The depth to water level map of August 2015 is shown in **Plate II**. The frequency distribution of the number of Ground Water Monitoring Wells with reference to the depth to water level range is shown in **Fig 1**.

Depth to water level in unconfined aquifer (Dug well) ranges from near ground level (0.00 m bgl) to 51.40 m bgl. The near water level near ground level is seen in isolated locations at Sakoli (Bhandara), Dahegaon-Pz (Gondia), Siphora (Jalna), Hingna-Raipur Pz, Sivani (Nagpur), Hudhre Bk, Karjat, Vadkhal (Raigadh), and Bhaindarpada, Katolwadi (Mulgaon), Murbad, Padghe-1, Pasheri (Thane); while deepest DTWL were observed at Faizpur (51.40 m bgl), Jalgaon and Dhadgaon (49.60 m bgl), Nandurbar.

Depth to water level in semi-confined and confined aquifer (Bore well/ tube well/ piezometer) were observed at Atali, Buldhana (1.60 m bgl) & Morwa, Chandrapur (1.59 m bgl); while deepest DTWL were observed at Shetphal & Uplai (50.00 m bgl), Solapur district.

Water levels less than 2 m bgl is observed in 24 % of wells covering about 39,125 sq. km. area. Water levels in this range are observed in major parts of Konkan region i.e., Mumbai, Thane, Raigadh, Sindudurg, Pune and also in Gondia & Bhandara districts. Isolated patches are observed in Nasik, Satara, Sangli, Kolhapur, Nagpur, Amravati, Wardha and Wardha & Washim districts.

About 28 % of wells covering about 89,305 sq. km. area show water levels between 2 and 5 m bgl. Water levels in this range are observed prominently in parts of Vidarbha region, Thane, Nashik, Pune, Satara, Sangli, Kolhapur, Sindhudurg, Ratnagiri, Jalgaon, Aurangabad & small isolated patches in all districts.

About 30 % of wells covering about 1,23,821 sq. km. area show water levels between 5 and 10 m bgl. Water levels in this range are prominently observed in parts of Nashik, Dhule, Nandurbar, Pune, Satara, Solapur, Sangli, Aurangabad, Ahmednagar, Beed, Osmanabad, Nanded, Amravati, Akola, Buldhana, Chandrapur, Gadchiroli, Yavatmal and Hingoli districts.

Deeper ground water levels ranging from 10 to 20 m bgl are observed mostly in northern part of Maharashtra in the Tapi and Purna River basins in Nandurbar, Dhule, Jalgaon, Buldhana, Akola and Amravati districts and isolated patches are also observed in Marathwada districts, Khandesh. About 15 % of wells fall in this category covering about 51,806 Sq km area.

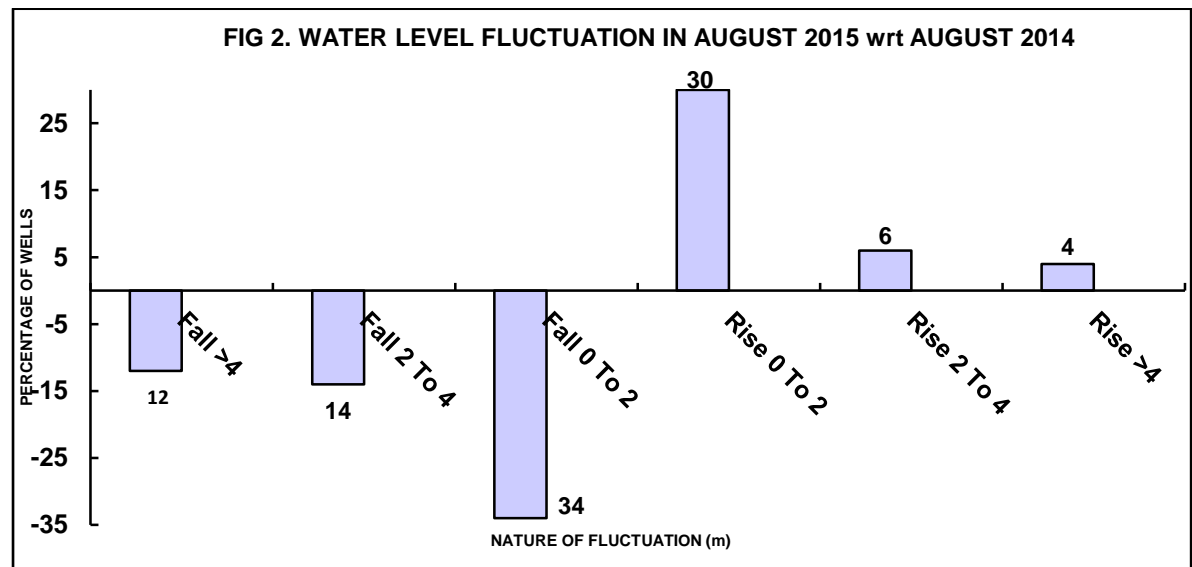

Ground water levels of more than 20 m bgl cover about 3,128 sq. km. area and are generally noticed in 3% of wells in parts of Jalgaon, Akola, Amravati and Nandurbar, Nashik, Osmanabad, Latur, Parbhani, Buldhana & Nanded districts.

In UT of Dadra and Nagar Haveli, 63% of well shows water level ranging from 0.75 to 9.30 m bgl, 50 % of well shows water level less than 2 m bgl; about 38 % wells

were showing 2 to 5 m bgl while 12 % wells were showing water level ranging from 5 to 10 m bgl.

III. WATER LEVEL FLUCTUATION IN AUGUST 2015 WITH REFERENCE TO AUGUST 2014

The water level fluctuation map for the period August 2015 with reference to August 2014 is presented in **Plate III**. The **Annexure III** gives the water level fluctuations in all districts of Maharashtra and Dadra and Nagar Haveli. The frequency distribution of the number of Ground Water Monitoring Wells with reference to the water level fluctuations is shown in **Fig 2**.

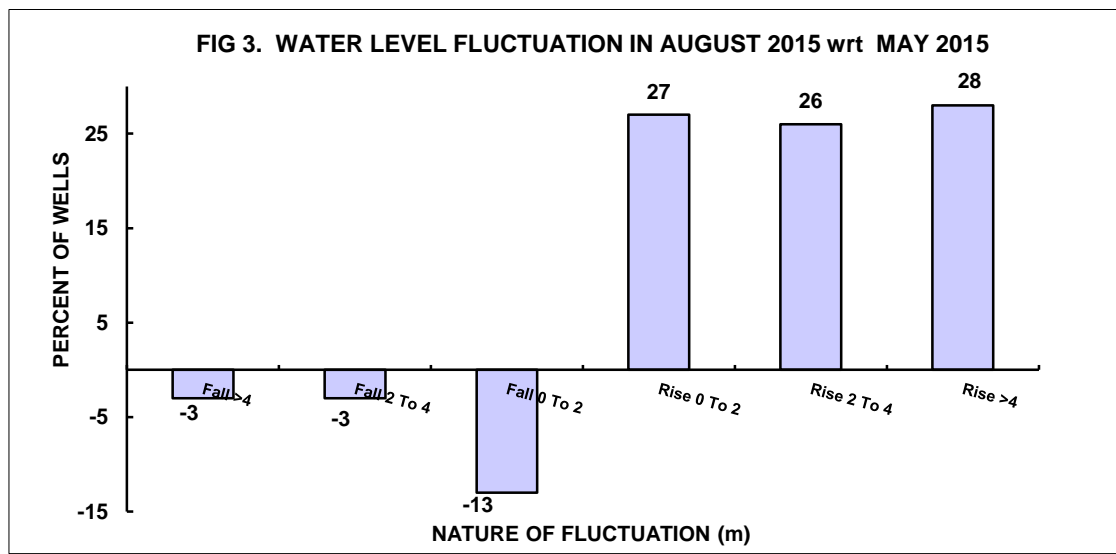

During the period from August 2014 to August 2015 the ground water levels have risen by upto 2 m observed in 30 % of wells, covering about 83,649 sq. km. area mostly in Raigadh districts, all districts of Vidarbha region except, Buldhana, Akola & Washim. Rise in water levels of more than 2 m is noticed in 10 % of wells covering about 23,294 sq. km. area. It is observed as isolated patches in Gondia, Bhandara, Chandrapur, Nagpur, Yavatmal, Nanded, Parbhani, Satara, Sangli, Kolhapur, and Jalgaon districts.

The water level decline is found in 60 % of wells. Fall up to 2 m is observed in 34 % of wells covering about 1,02,665 sq. km. area and more than 2 m decline in 26 % of wells covering about 97,474 sq. km. area. Water level decline are observed in major parts of Marathwada region, Khandesh and Western Maharashtra region. Water level decline of more than 2m are also observed in these regions. This decline was may be due to less rainfall received during the month of August 2015, as depicted by the rainfall departure map (Plate I). In UT of Dadra and Nagar Haveli, all wells are showing fall, about 55 % wells (4 wells) show a water level fall up to 2 m, and 45% show fall more than 2 m.

IV. WATER LEVEL FLUCTUATION IN AUGUST 2015 WITH REFERENCE TO MAY 2015

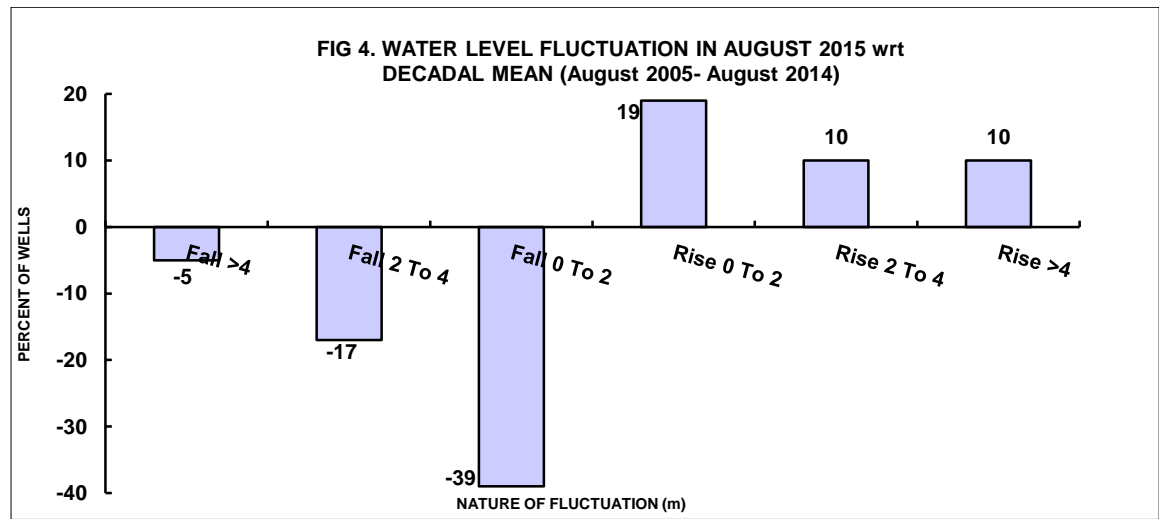

The fluctuation map for the period August 2015 with reference to May 2015 is presented in **Plate IV**. The **Annexure IV** gives the water level fluctuations in all the districts of Maharashtra and Dadra and Nagar Haveli. The frequency distribution of the number of Ground Water Monitoring Wells with reference to their fluctuations is shown in **Fig 3**.

The water levels have shown a general rise in about 81 % of the wells covering almost entire State. Such a rise is a normal phenomenon in the hydrological cycle since the monsoon rainfall, the sole source of natural recharge to ground water regime in the state recharges the ground water body. The water level rise upto 2 m observed in 27 % of wells, while water level rise more than 2 m is observed in 54 % almost in entire State of Maharashtra and Dadra & Nagar Haveli except parts of Yavatmal, Nanded, Hingoli, Parbhani, Latur, Osmanabad, Solapur, Satara, Sangli, Pune, Ahmednagar, Nashik, Dhule, Nandurbar, and Jalgaon districts. This significant water level rise indicates an optimum saturation of phreatic aquifers due to normal monsoon rainfall. Only 19 % of the wells in Maharashtra show a marginal decline in water levels possibly due to local phenomena and is observed in Yavatmal, Nanded, Hingoli, Parbhani, Latur, Osmanabad, Solapur, Satara, Sangli, Pune, Ahmednagar, Nashik, Dhule, Nandurbar, and Jalgaon districts as isolated scattered patches. This may also due to less monsoon rainfall received specially in Parbhani, Beed, Latur and Osmanabad districts of Marathwada and Madhya Maharashtra region.

V. WATER LEVEL FLUCTUATION IN AUGUST 2015 WITH REFERENCE TO THE DECADAL MEAN OF AUGUST 2005-2014

The water level fluctuation map for the period August 2015 with reference to the decadal mean of August 2005-August 2014 is presented in **Plate V**. The **Annexure V** gives the fluctuation in all districts of Maharashtra and the Union Territory of Dadra and Nagar Haveli. The frequency distribution of the number of Ground Water Monitoring wells with reference to their water level fluctuations is shown in **Fig 4**.

The perusal of **Plate V** shows that 39 % of wells covering about 73,874 sq. km. area in Maharashtra show rise in water level, out of which 19 % wells covering about 65,985 sq. km. area show rise up to 2 m and 20 % wells between 2 m and 4 m and more covering about 7,889 sq. km. area. It is prominently observed in major parts of Vidarbha especially in Amravati, Wardha, Nagpur, Bhandara, Gondia, Chandrapur, Yavatmal, Akola and Buldhana districts. Rise in water level has also observed in parts of Jalgaon, Thane, Raigadh, Pune, Sangli districts. Such a rise could be due to positive departure of 2015 rainfall with respect to the decadal average.

Major part of the State shows decline in water level in 61 % of wells covering about 2,33,307 sq. km. area. It is prominently observed in entire Maharashtra especially in major parts of Marathwada, Khandesh region, eastern & western Vidharbha, and isolated patched observed in most of the districts. In UT of Dadra & Nagar Haveli, all the wells show decline in water levels up to 2 m. The water level decline may be due to the negative departure of 2015 rainfall with respect to their decadal rainfall normal. Such declines in water levels may also be due to ground water developmental activities apart from the poor saturation of aquifers.

Annexure-I

District-wise Depth to Water Level of August-2015 and Fluctuation with respect to May-2015 and Aug-2014, in Maharashtra State and UT of Dadra & Nagar Haveli
