## **ANNEXURES**

- I Depth to Water Level - Distribution of Percentage of Observation Wells during May 2015 in Maharashtra State and Union Territory of Dadra & Nagar Haveli
- II District wise Fluctuation and Frequency Distribution of Water Levels (May 2015 to May 2014) in Maharashtra State and Union Territory of Dadra & Nagar Haveli
- III District wise Fluctuation and Frequency Distribution of Water Levels (May 2015 to Jan 2015) in Maharashtra State and Union Territory of Dadra & Nagar Haveli
- IV District-wise Fluctuation of May 2015 Water Level with the Decadal Mean (2005–2014) in Maharashtra State and UT of Dadra & Nagar Haveli
- V District-wise Depth to Water Level in Dug wells and Piezometers during Nov-2014, Jan-2015 and May-2015 in Maharashtra State and UT of Dadra & Nagar Haveli

## **PLATES**

- I Depth to Water Level during May 2015
- II Water Level Fluctuation in May 2015 with reference to May 2014
- III Water Level Fluctuation in May 2015 with reference to January 2015
- IV Water Level Fluctuation in May 2015 with reference to the Decadal Mean of May 2005-2014.

## **EXECUTIVE SUMMARY**

Central Ground Water Board, Central Region, monitors ground water levels through a network of about 1763 National Ground Water Monitoring Wells spread over the State of Maharashtra and the Union Territory of Dadra & Nagar Haveli four times in a hydrological year (August, November, January and May). The present report gives an overview of the status of ground water levels in Maharashtra and Dadra and Nagar Haveli during the pre-monsoon period (20<sup>th</sup> to 30<sup>th</sup> May 2015). The monitoring of ground water regime during May is particularly important in order to assess the status of ground water levels before the onset of monsoon i.e., Pre-monsoon period. It gives the deepest ground water level disposition in the area.

Depth to water level ranges from near to ground level in Satara, Sangli, Raigadh, Nashik, Nandurbar, Kolhapur, Thane districts to more than 50 metres below ground level (m bgl) at Jalgaon & Latur district in Maharashtra and from 3.1 to 14.2 m bgl in the Union Territory of Dadra and Nagar Haveli. Water levels of less than 2 m bgl is observed in 3 % of wells covering about 1,905 sq. km. area. About 27% of wells covering about 37,625 sq. km. area show water levels between 2 and 5 m bgl. About 49 % of wells covering an area of 1,81,556 sq. km show water levels between 5 and 10 m bgl. Deeper ground water levels, ranging from 10 to 20 m bgl are observed in 26% of wells covering about 82,012 sq. km. while ground water levels of more than 20 m are observed in 2.1% of wells covering about 4,122 sq. km.

The depth to water level during May 2015 has been compared with depth to water level for the month of Jan-2015, May-2014 and decadal mean of May water level for the period from 2004 to 2015. A relative fall in DTWL with respect to Jan-2015 has been observed as a natural phenomenon. Similarly, about 66 % of wells covering about 2,05,289 sq km area have shown fall in water levels when compared to May 2014. When compared with the decadal mean of May water levels (2005-2014), significant fall in DTW is observed in parts of Marathwada and Madhya Maharashtra Regions. This indicates the severe probable scarcity areas during summer-2015 till monsoon arrives.

# **STATUS OF GROUND WATER LEVELS IN MAHARASHTRA AND UNION TERRITORY OF DADRA & NAGAR HAVELI DURING MAY 2015**

## **I. INTRODUCTION**

Central Ground Water Board (CGWB) monitors ground water levels all over the country four times a year in order to bring out spatial and temporal changes in the ground water regime. This continuous monitoring provides a valuable tool to decipher the seasonal and long-term changes in ground water levels and in turn helps in managing the ground water resources in a more scientific and effective manner.

The Central Ground Water Board, Central Region, Nagpur, monitors about 1763 Ground Water Monitoring Wells (GWMW) established in the State of Maharashtra and the Union Territory of Dadra & Nagar Haveli. These stations are monitored four times in a given hydrological year in the months of August, November (post-monsoon), January and May (pre-monsoon). The long-term data generated during these monitoring seasons are important for computation, comparison and analysis of ground water utilization and its availability.

During the monitoring, 1612 active GWMW (1418 DW and 194 Pz) were and monitored out of about 1763 GWMW spread over entire Maharashtra and UT of Dadra & Nagar Haveli. The district wise status of GWMW for the month of May-2015 is presented in **Table 1**. The present report provides an analysis of the ground water level data monitored during May 2015 and compared with those of May 2014, January 2015 and the decadal (2005-2014) mean of the May water levels. The monitoring of ground water regime during the month of May is particularly important in order to assess the status of ground water levels before the onset of monsoon i.e., Pre-monsoon period. It gives the deepest ground water level disposition in the area. Also, it gives the volume of unsaturated aquifer, which is supposed to replenish naturally by the monsoon rainfall.

The State comprises of four meteorological sub-divisions namely Konkan, Madhya Maharashtra, Marathwada and Vidarbha. The State receives rainfall during the southwest monsoon season (June to September).

**Table 1: Status of Ground Water Monitoring Wells, Maharashtra and UT of DNH,  
Month- MAY-2015**

*#Here, Wells not Monitored due to various reasons like well not approachable, lock jam, outside water added, well filled up, well fitted with pump, disturbed law & order conditions etc.*

As per the IMD, RMC, Mumbai the departure of monsoon rainfall from normal rainfall for the period 1<sup>st</sup> June 2014 to 30<sup>th</sup> September 2014 from 34 districts of Maharashtra has been considered to correlate the ground water level scenario. It is observed that entire Maharashtra has received ‘normal rainfall’ with negative departure from -6 % to -14% except Marathwada region which has received ‘deficient rainfall’ with negative departure up of -42%. The Khandesh and Western Maharashtra region have received normal rainfall with negative departure of 7%. In Konkan region normal rainfall received with negative departure up to -6%. None of the district has shown excess rainfall during monsoon season 2014.

## II. DEPTH TO WATER LEVEL DURING MAY 2015

The **Annexure I** give the depth to water level ranges in all the districts of Maharashtra and Union Territory of Dadra and Nagar Haveli. The depth to water level map of May 2015 is shown in **Plate I**. The frequency distribution of the number of Ground Water Monitoring Wells with reference to the depth to water level range is shown in **Fig 1**.

Depth to water level ranges from near to ground level in Satara, Sangli, Raigadh, Nashik, Nandurbar, Kolhapur, Thane districts to more than 50 metres below ground level (m bgl) at Jalgaon & Latur district in Maharashtra and from 3.1 to 14.2 m bgl in the Union Territory of Dadra and Nagar Haveli.

Water levels of less than 2 m bgl are observed in 3 % of wells covering about 1,905 sq. km. area. These are observed as isolated patches in parts of Satara, Sangli, Raigadh, Nashik, Nandurbar, Kolhapur, Thane districts.

About 27% of wells covering about 37,625 sq. km. area show water levels between 2 and 5 m bgl. Water levels in this range are observed in major parts of Raigadh, Pune, Thane Satara, Sangli and Kolhapur districts. Isolated patches showing depth to water level between 2 and 5 m bgl are also observed in all districts except Jalna, Parbhani and Nanded districts.

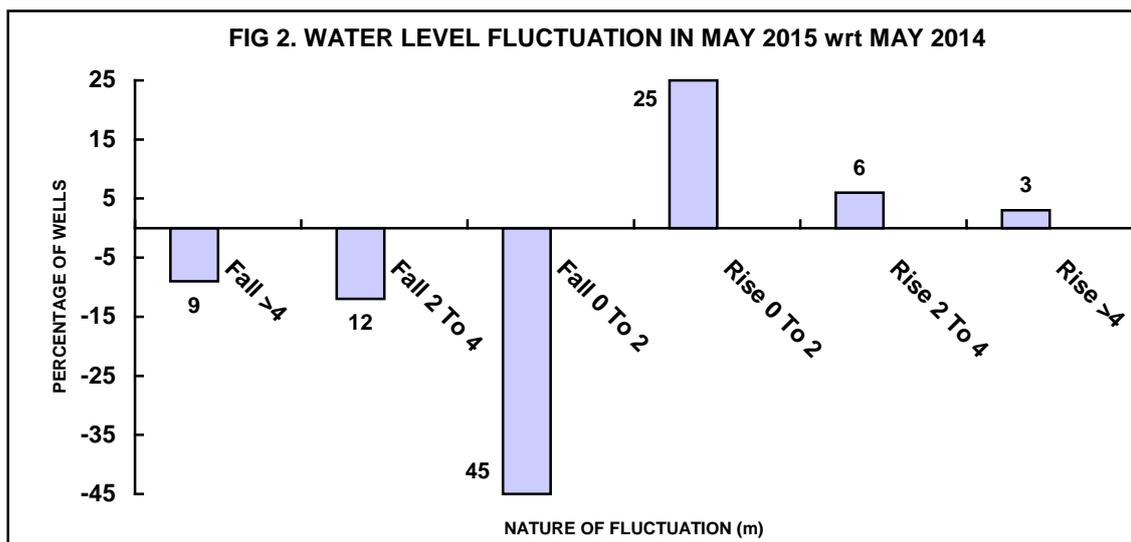

About 49 % of wells covering an area of 1,81,556 sq. km show water levels between 5 and 10 m bgl. Water levels in this range are observed in major parts of all districts and small patches in Raigadh, Aurangabad, Jalna and Latur districts.

Deeper ground water levels ranging from 10 to 20 m bgl are observed in about 26% of wells covering about 82,012 sq. km. of the State and are found in northern part of Maharashtra in the Tapi and Purna River basins in parts of Nandurbar, Dhule, Jalgaon, Buldhana, Akola, and Amravati districts. Besides this, major part of Aurangabad, Jalna, Latur, Osmanabad, Ahmadnagar, Nashik, Ratnagiri and Solapur districts also show DTWL ranging from 10 to 20 m bgl. Apart from this, isolated small patches observed in almost all districts except Raigadh district.

Ground water levels of more than 20 mbgl (3% wells), covering about 4,122 sq. km. area are noticed in the area occupied by Tapi and Purna alluvium basin covering parts of Jalgaon, Buldhana, Akola and Amravati districts. The deeper water levels are characteristic of these basins due to its high ground water potential and over exploitation. Water levels of this range are also observed in basaltic terrain as isolated patches in Aurangabad, Nashik, Nanded, Parbhani, Washim, Latur, Solapur and Ratnagiri districts.

### **III. WATER LEVEL FLUCTUATION IN MAY 2015 WITH REFERENCE TO MAY 2014**

The water level fluctuation map for the period May 2015 with reference to May 2014 is presented in **Plate II**. The **Annexure II** gives the water level fluctuations in all districts of Maharashtra and Dadra and Nagar Haveli. The frequency distribution of the number of Ground Water Monitoring Wells with reference to the water level fluctuations is shown in **Fig 2**.

The comparison water level data of May 2015 and May 2014 indicates that during this period the ground water levels have shown rise of more than 4 m in 3 % of wells covering about 3,705 sq. km. area covering major parts of Solapur, Osmanabad, Pune, Ahmadnagar and Buldhana districts. Rise in water levels up to 4 m is noticed in 31 % of wells covering about 98,156 sq. km. area. It is observed in major parts of Satara, Sangli, Kolhapur, Ratnagiri, Raigadh, Thane, Pune, Solapur, Osmanabad, Beed, Ahmadnagar, Nashik, Dhule, Jalgaon, Amravati and Yavatmal districts. It is also observed as isolated patches in almost all districts.

The decline in water level is observed in 66 % of wells. Decline up to 2 m is observed in 45 % of wells covering about 18,686 sq. km area and more than 2 m decline is observed in 21 % of wells covering about 1,86,603 sq. km. area. Declines are observed in major parts of Marathwada region prominently in Aurangabad, Jalna, Parbhan districts and entire Vidarbha region. Declines are observed in almost all districts as isolated small patches.

In UT of Dadra and Nagar Haveli, 30% wells show rise in water levels upto 4 m. while 70% wells show fall in water levels.

#### **IV. WATER LEVEL FLUCTUATION IN MAY 2015 WITH REFERENCE TO JANUARY 2015**

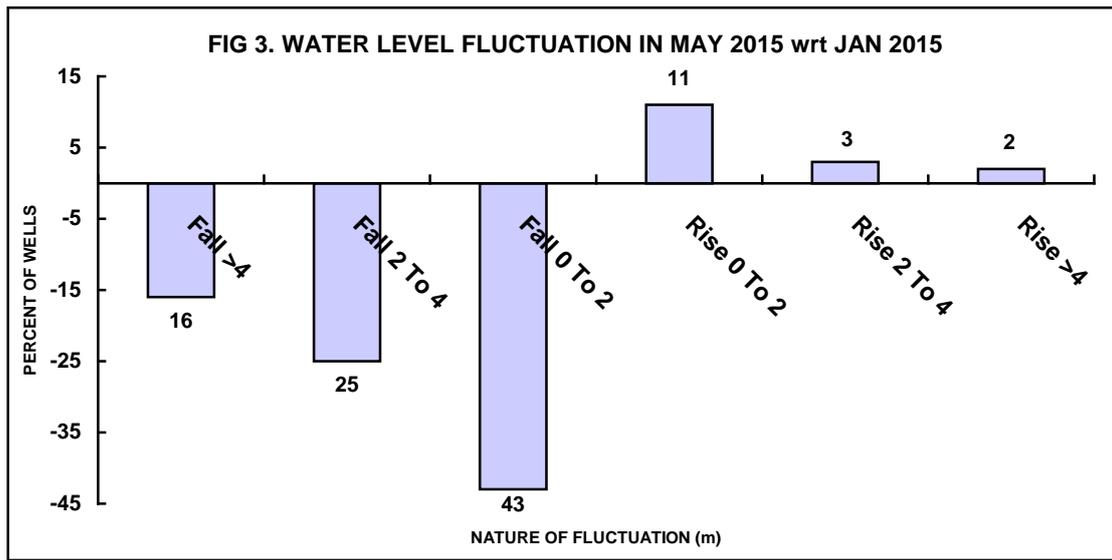

The water level fluctuation map for the period May 2015 with reference to January 2015 is presented in **Plate III**. The **Annexure III** gives the water level fluctuations in all the districts of Maharashtra and Dadra and Nagar Haveli. The frequency distribution of

the number of Ground Water Monitoring Wells with reference to their fluctuations is shown in **Fig 3**.

The water levels have shown a general decline in about 84% of the wells covering almost entire State in about 2,77,100 sq. km. area while it is compared with Jan 2015 water level data. This fall is a normal phenomenon since the period between January and May represents the receding period in a given hydrological cycle. Fall in water levels up to 2 m is exhibited in about 43 % of wells covering about 1,37,966 sq. km. area. 25 % of wells covering about 1,00,314 sq. km. area exhibit water level fall between 2 and 4 m. More than 4 m fall in water levels are noticed in about 16% of wells covering about 38,821 sq. km. area. This decline in water level is observed in entire Maharashtra State.

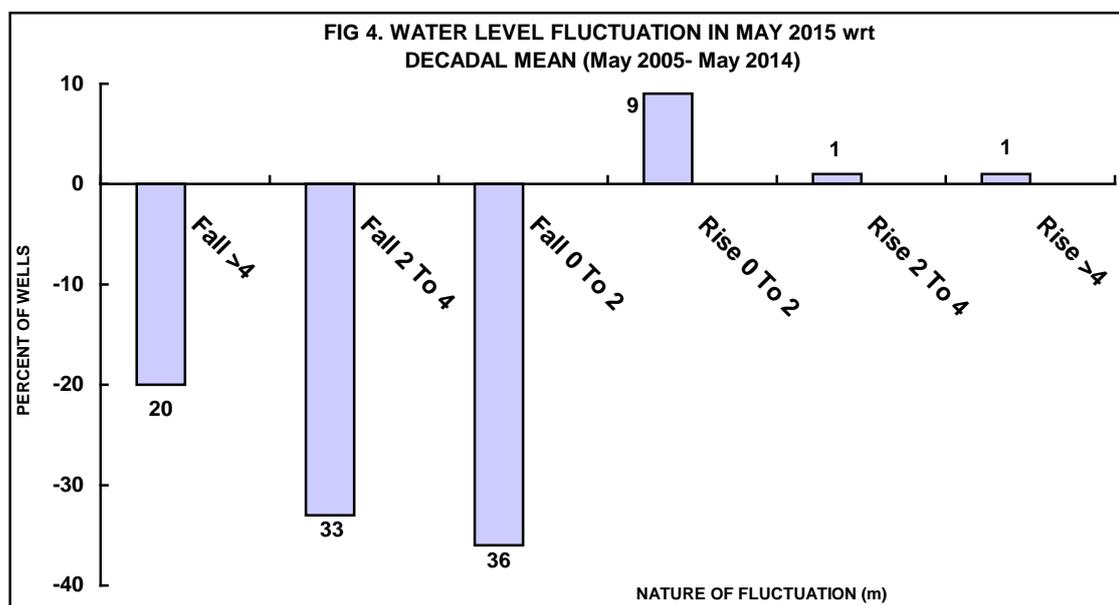

However, about 16% of wells covering about 30,134 sq. km. area in Maharashtra, especially in Jalgaon, Pune, Solapur, Osmanabad, Nanded, Latur, Parbhani and Yavatmal districts have shown rise in water levels. However, in majority of wells (11 %) marginal rise of less than 2 m is observed. This rise in water levels observed in very small patches in above districts.

In UT of Dadra and Nagar Haveli, all the wells show fall in water level ranging up to 4 m.

## V. WATER LEVEL FLUCTUATION IN MAY 2015 WITH REFERENCE TO THE DECADAL MEAN OF 2005 –2014

The water level fluctuation map for the period May 2015 with reference to the decadal mean of May 2005 – May 2014 is presented in **Plate IV**. The **Annexure IV** gives the fluctuation in all districts of Maharashtra and the Union Territory of Dadra and Nagar Haveli. The frequency distribution of the number of Ground Water Monitoring wells with reference to their water level fluctuations is shown in **Fig 4**.

The perusal of **Plate IV** shows that 11% of wells covering about 1,53,423 sq. km. area in Maharashtra show a rise in water level, out of which 9 % wells covering about 1,28,694 sq km show marginal rise between 0-2 m, 1% between 2-4 m and 1% wells show more than 4 m covering area about 24,529 sq km. The rise in water levels is observed in all the districts prominently in parts of Raigadh, Ahmadnagar, Pune, Sangli, Satara, Solapur, Nashik, Dhule, Jalgaon, Buldhana, Amravati, Nagpur, Chandrapur, Bhandara and Gondia districts.

The decline in water level is noticed in 89 % of wells covering about 1,53,793 sq km. out of which 36% wells covering about 1,22,285 sq km show fall in water level between 0-2 m and 33% between 2-4 m and 20% more than 4 m covering area about 31,508 sq. km. The declines are prominently observed in Aurangabad, Jalna, Nanded, Parbhani, and Hingoli districts.

In UT of Dadra & Nagar Haveli, all the wells show fall in water levels up to 4 m. The water level decline may be due to the negative departure of 2014 rainfall with respect to their decadal rainfall normal. Such declines in water levels may also be due to ground water developmental activities apart from the poor saturation of aquifers.

District-wise Depth to Water Level in dug wells and piezometers during Nov-2014, Jan-2015 and May-2015 in Maharashtra State and UT of Dadra & Nagar Haveli is presented as **Annexure-V**.

## Annexure-I

### Depth to Water Level - Distribution of Percentage of Observation Wells during May 2015 in Maharashtra State and the Union Territory of Dadra & Nagar Haveli

District	Number wells analysed	DTWL (m bgl)		No / % of Wells showing DTWL (m bgl) in the range of
