GROUND WATER YEAR BOOK, BIHAR

(2015-2016)

ABSTRACT

Monitoring of ground water levels from 723 Hydrograph Network Stations (HNS) were carried out in the year 2015-2016 with an objective to assess ground water regime of phreatic aquifer. The water level monitoring was carried out in the months of May'15, August'15, November'15, and January'16. The ground water samples from the HNS were collected in the month of May'15 for chemical analysis. The water level in the HNS represented phreatic aquifer.

The observed water level data had been grouped into four categories viz. 0-2 m, 2-5 m, 5-10 m and >10 m. Thematic maps depicting ground water levels measured in different periods had been prepared. The water levels had been further analysed for study of its' change with respect to measurement of pre-monsoon period of the same year, previous year water level data of the same period, and decadal mean water level data of the same period. The fluctuation had been grouped under rise and fall categories. In each category there are three groups viz. 0-2 m, 2-4 m and >4 m. Thematic maps had been prepared for each category of fluctuation.

During pre-monsoon 2015 the ground water levels were found to vary between 1.00 and 15.80 m bgl. The depth to water level rests in range of 2 – 5 m bgl in 49% of HNS, which spatially covers northern part of North Bihar Plains (NBP) and small patches in the South Bihar Plains (SBP). During post-monsoon, water level rested in the range of 2 – 5 m bgl in 59% of the HNS. The fluctuation of water level between pre and post-monsoon 2015 indicates rise in water level in 93% of the HNS. Annual change of water level of May 2015 with respect to May 2014 has shown rise in water level in 41 % of the HNS, and during November 2015 with respect to November 2014 indicated fall in 83 % of the HNS. The change in water level of May 2015 with respect to the decadal mean of May (May 2005 to May 2014) has indicated rise in 53 % of the HNS and during November 2015 with respect to the decadal mean of November (November 2005 to November 2014) indicated fall in 80% of the HNS.

GROUND WATER YEAR BOOK, BIHAR

(2015-2016)

1. INTRODUCTION

Bihar state lies between $83^{\circ} 20'$ and $88^{\circ} 00'$ E Longitudes and $24^{\circ} 15'$ and $27^{\circ} 23'$ N Latitudes. It shares international border with Nepal in the north and is bounded in the east, west and south by West Bengal, Uttar Pradesh and Jharkhand states respectively. The state covers geographical area of 94,163 Sq.km and has its capital at Patna (*Fig 1*).

Administratively the state is divided into 38 districts and 534 community development blocks. The population of the state is 10.41 crores (2011 census). Population density is 881 persons/Sq.km. The urban population is 11,758,016 and rural population is 92,341,436. There are 150 small and large towns in the state. The distribution of urban population is highly skewed as only three towns namely Gaya, Bhagalpur, and Muzaffarpur are having population of more than 3 lakhs, besides urban population of Patna urban agglomeration which is having 1,683,200.

2. HYDROGEOLOGY

The generalized stratigraphic succession of the state is presented in Table 1. The hydrogeological map of Bihar is depicted in *Fig 2*.

Table 1. Generalized geological succession of Bihar.

<i>Age</i>	<i>Formation</i>	<i>Broad Lithology</i>
Quaternary	Alluvial Deposits	Sand, clay, silt and occasional gravel
Tertiary	Siwaliks	Sandstone, conglomerate, clay stone, gravel
L-Cambrian	Vindhyan Super Group	Sandstone, limestone.
Proterozoic	Chotanagpur Granite Gneiss	Granite, granitic-gneiss, schist, phyllites, Dolomites, basic rocks, amphibolites.
Archean	Bihar Mica belt	Gneiss, Pegmatites etc.,

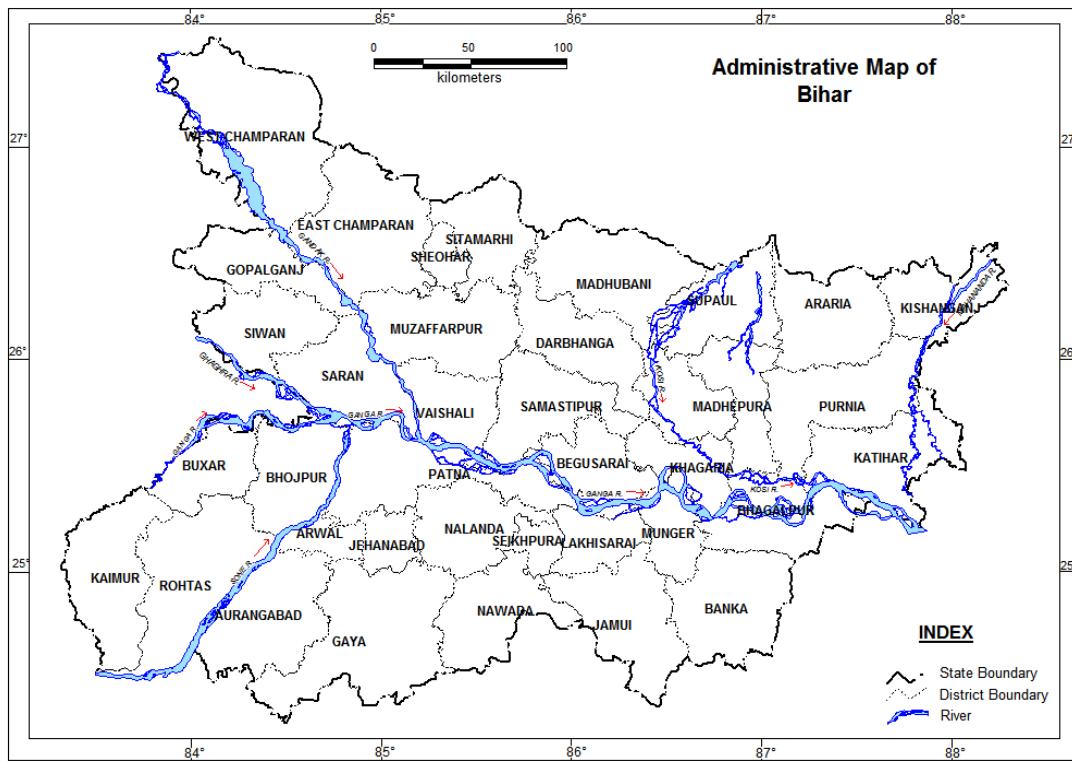

Fig. 1 Administrative Map of Bihar State

Pre-cambrians

The rocks belonging to Proterozoic and Archean age are granite, granitic-gneiss, quartzite, phyllites, slates, and metabasics. Rocks of Chhotanagpur Granite Gneissic Complex (CGGC) suit occur in the form of small strip in the districts bordering Jharkhand state. Meta-basic rocks intrude the Chhotanagpur Granite Gneiss Complex suit of rocks. Mica bearing pegmatite of Bihar Mica Belt has been found in Gaya, Nawada and Munger districts. In parts of Munger, Gaya and Nawada districts the meta-sedimentary rocks (viz. phyllite, schist and quartzite) of Pre-cambrian age are also found.

The occurrence and movement of ground water is controlled by the thickness and nature of weathered mantle and saprolite zone (a transition zone between weathered residuum and fresh basement), besides fractures lying underneath the weathered residuum. Thickness of the weathered zone usually ranges from 5 to 20 m. Thickness of weathered zone is more in schist and other meta-sedimentary rocks in comparison to the granite-gneiss. The weathered product of granite and granite-gneiss is marked by presence of coarse granular materials composed of quartz and feldspar, whereas those of schist and phyllite by clayey materials.

Ground water occurs under unconfined condition within the weathered mantle and saprolite zone. In the secondary porosities imparted by joints, cracks and fractures, ground water occurs under confined to semi-confined conditions.

Vindhyan

Rocks of Vindhyan Super-group are confined in the west and north of the river Sone and forms eastern end of the Kaimur Plateau. It occurs in the parts of Rohtas, Kaimur and Aurangabad districts. The width of the Vindhyan rocks becomes less than 3 km near Sasaram in Rohtas district. Rocks found under this super-group are mainly sandstone, limestone, quartzite and schist. These rocks behave as consolidated formation and have remained unaffected by any large-scale tectonic disturbances, except faulting at a few places in the geological past. Vindhyan sandstones are compact and have low primary porosity. Ground water in this occurs within the weathered residuum and in the secondary porosity below them. Ground water occurs under unconfined condition in the weathered mantle. The thickness of the weathered residuum varies from 5 to 10 m.

Siwaliks

The Siwaliks of Upper Tertiary age occur as small patches in northwestern corner of the state in West Champaran district bordering Nepal. It consists of sandstone, conglomerate, red clay and spongy limestone and forms structural hills with a number of faults crisscrossing them. Ground water occurs under confined conditions in sandstones disposed at depth.

Quaternary alluvium

Quaternary sediments of Recent to Sub-Recent age cover about 89 percent of the geographical area of the state. They occupy entire north Bihar plain, and a vast stretch of land between south of the river Ganga and the Chhotanagpur Plateau. Deep exploratory drilling by Central Ground Water Board has confirmed thickness of sedimentary deposits in north Bihar plain as more than three hundred meter. In the south of the river Ganga, the alluvial thickness gradually decreases to as low as 50 m or even less, towards the area bordering the Jharkhand state. The sedimentary deposit consists of alternate sequences of sand and clay layers representing multi-cyclic nature of sedimentation. The Quaternary alluvial deposit spread over south and north of the river Ganga is a part of Mid-Ganga Plain. The Terai belt, which is demarcated by auto-flow wells, occurs as a narrow strip in the bordering areas in Madhubani, Darbhanga, and West Champaran districts. It is an extension of Terai belt of Nepal which coalesces with alluvial plain. Ground water occurs under unconfined conditions in the phreatic aquifer, which is generally disposed within 70 m below ground. Aquifers situated at deeper levels have ground water levels under confined condition.

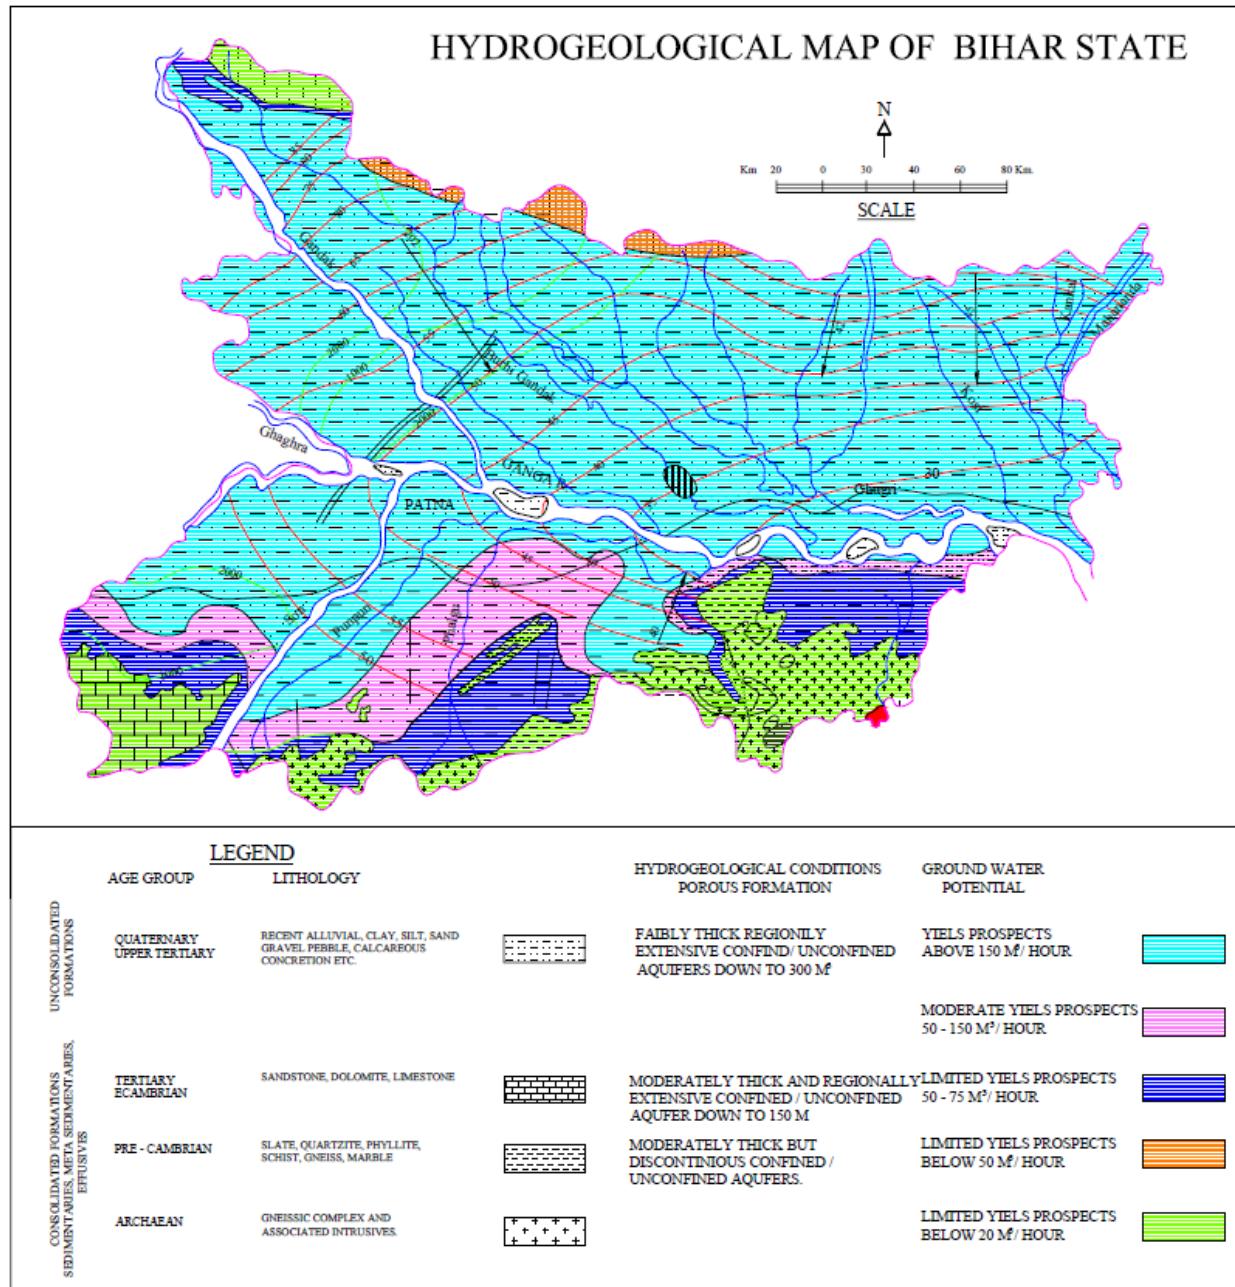

Fig. 2 Hydrogeological Map of Bihar State

3. GROUND WATER SCENARIO

A total of 631 Hydrograph Network Stations (HNS) which are dug wells tapping phreatic aquifer has been monitored as a part of ground water regime monitoring in the state of Bihar. Majority of the wells represent phreatic alluvial aquifer. The district wise location and distribution of the HNS are given in Fig 3 and Table 2 respectively.

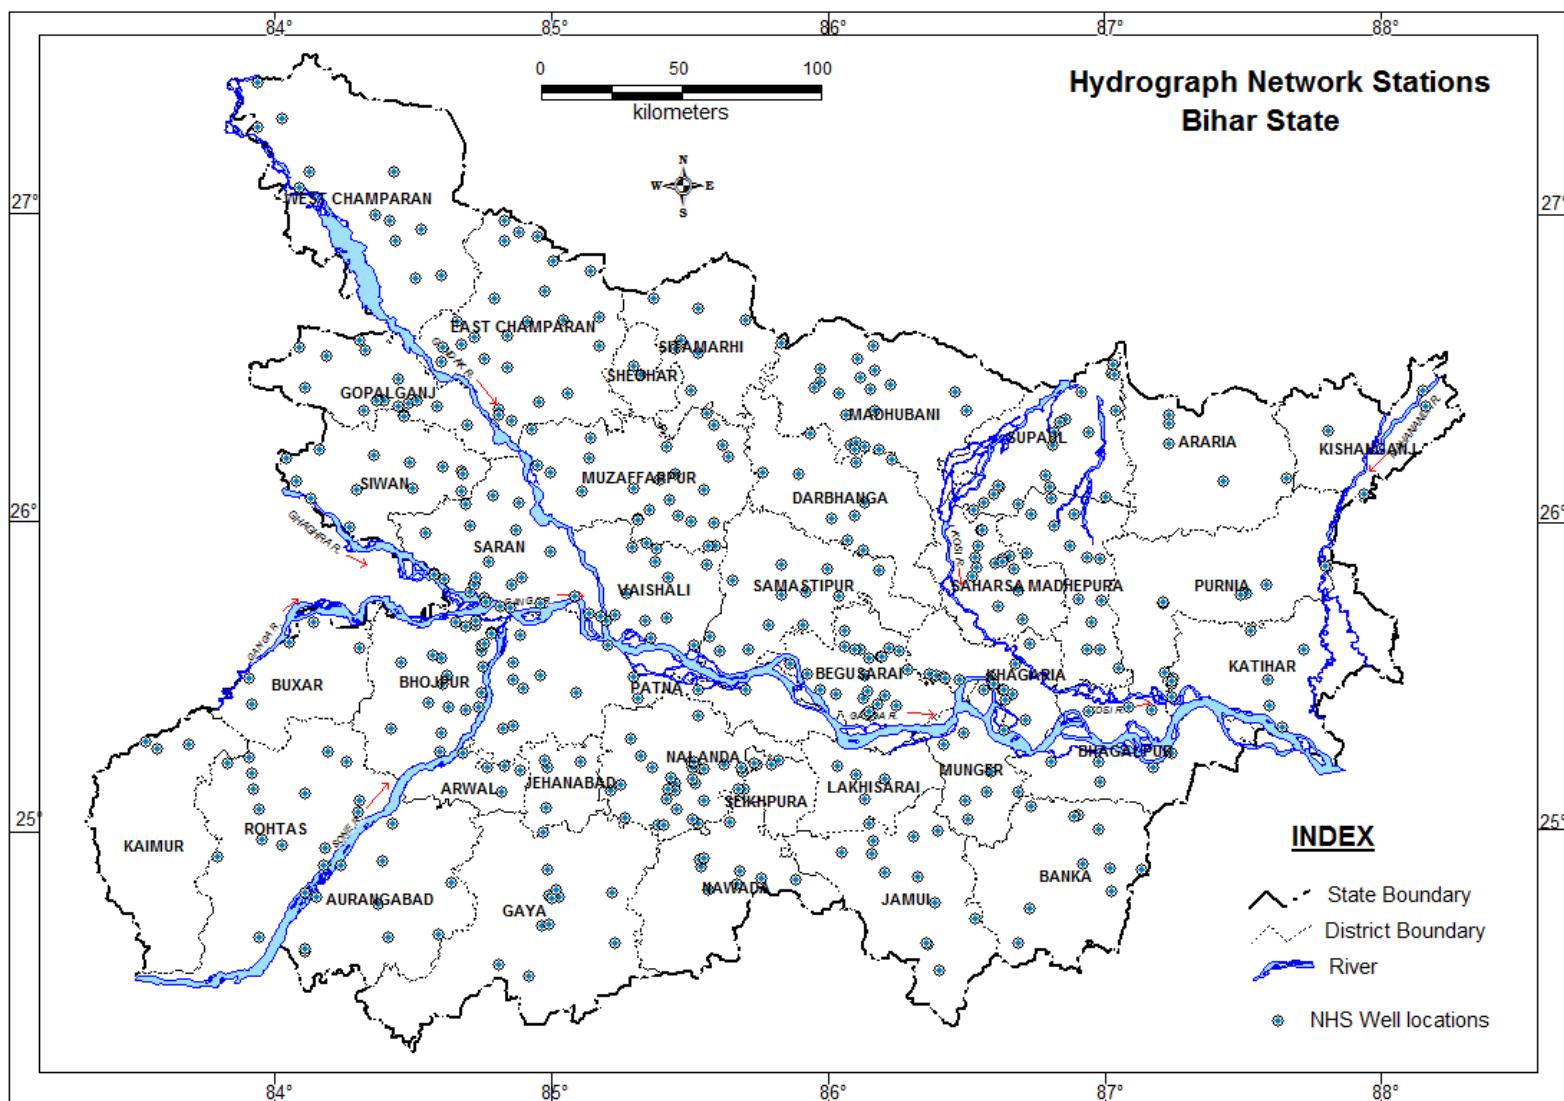

Fig. 3 Location of hydrograph network stations in Bihar State (as on 31.03.2015)

Table 2 District wise distribution of the HNS as on 31.03.2015

Besides above, new wells are established during 2015-16

The numbers of HNS monitored in the state as per the following monitoring schedules:

Table 3 HNS monitoring schedule

Sl. N.	Month	Date	Period
1	May	20 – 30	Pre-monsoon
2	August	20 – 30	Mid-monsoon
3	November	1 – 10	Post-monsoon
4	January	1 – 10	Recession

The Number of HNS monitored during the various monitoring period is given in **Table-4**. The water level data of HNS are presented in the Annexure I. The data were analysed for each set of measurement and the thematic presentation of depth to water level and its fluctuations have been prepared in the range of 0 – 2 m, 2 – 5 m, 5 – 10 m and more than 10 m using GEMS software. Bihar state has been broadly divided into North Bihar Plain (NBP) consisting of areas falling to the north of the river Ganga and South Bihar Plain (SBP) consisting of areas falling to the south of the river Ganga and bordering Jharkhand state.

Table 4 Number of HNS monitored/analysed during different months

State	May'15	August'15	November'15	January'16
Bihar	619	615	636	625

3.1 DEPTH TO WATER LEVEL

3.1.1 May 2015

During the Pre- Monsoon period (May 2015), total 619 HNS were analysed. The Minimum depth to water level is 1.00 m bgl has been observed at, Madhubani district, and maximum depth to water level is 15.80 m bgl, occurred at, Jamui district. The depth to water level rests in range of 2 – 5 m bgl in 46% of the area of Bihar State, which spatially covers northern part of North Bihar Plains (NBP) and as small patches in the South Bihar Plains (SBP). The depth to water level rests in the range of 5 – 10 m bgl in about 51% of the area covering the area adjoining to the river Ganga, and major parts of SBP. In ~ 3% of area, water level > 10 m bgl has been recorded, which distributed as isolated patches mainly in Kaimur, Rohtas, Jamui, Bhagalpur Aurangabad and Banka district. In only 9 Hydrograph Network Station (HNS) which falls in Madhubani, Araria, Sheohar Nawada, Nalanda Saran, Supaul district, the depth to water level < 2 m bgl has been recorded (**Fig. 4; Table 5**).

3.1.2 August 2015

During mid-monsoon (August 2015), total 615 HNS were monitored and analysed. The depth to water level has been found to vary between 0.02 m bgl (Muzaffarpur district) and 11.80 m bgl (Jamui disrtict). The depth to water level categorized in the range of 0 – 2 m bgl which covers in about 22% area due to monsoon rainfall. It specially covers the major part and bordering area of Gopalganj, Madhubani, Supaul, Madhepura, Kishanganj, Araria, Sheikhpura, Banka, Saharsa E & W Champaran and Purnia district and as patches in many other part of the State.

Major part (65%) of the State has shown the depth to water level in the range of 2-5 m bgl. This range of water level covers major part of the state except majore parts of E & W Champaran Saharsa Araria, Supaul, Madhepura, Kishanganj, and small patches in districts of south Bihar. Major part of Kaimur, Rohtas, Buxer, Samastipur districts and other some other parts as patches in South Bihar Plain, the depth to water level rests in the range of 5 to 10 m bgl which forms about 12% of the area of the State. Only four wells have shown water level more than 10 m bgl located in Gaya and Rohtas district. (**Fig. 5; Table 6**)

3.1.3 November 2015

During post-monsoon period (November 2015) total 636 HNS were analysed. The minimum and the maximum depth to water levels have been recorded as 0.44 m bgl (Patna district) and 13.50 m bgl (Jamui district) respectively. In major area of the State (70%) recorded in 378 wells, water level rests in range of 2 – 5 m bgl which covers almost entire Northern part and major part of Southern part of Bihar State. The depth to water level in the range of 5-10 m bgl occurs in about 25 % of the area, which occurs in a major part of Vaishali Begusarai Jamui Gaya Nalanda Kaimur Rohtas Buxer district and many other places as patches. The water level in the range of 0 – 2 m bgl has been observed in only 9% of HNS, spatially covers as small patches at many locations in NBP and a few locations in SBP. There are only 2% HNS stations are there where level has been observed more than 10 m bgl (**Fig. 6; Table 7**).

3.1.4 January 2016

During the recession period (Jan. 2014), 625 HNS were analysed. The minimum depth to water level of 0.77 m below ground level (bgl) has been observed in the Sheikhpura district, and maximum water level of 13.50 m bgl has been observed in the Jamui district. The depth to water level rests in range of 2 – 5 m bgl in 59% of the area of Bihar State. The depth to water level rests in the range of 5 – 10 m bgl in 39% of the area covering adjoining area and major part of Lakhisarai, Sheikhpura, Jamui, Samastipur, Begusarai, Gaya, Aurangabad, Rohtas, Kaimur, Buxer and many locations as patches . In only 4% HNS which falls mostly as patches in NBP the depth to water level < 2 m bgl has been recorded In only 23 wells located in E & W Champaran, Madhubani, Sheohar, Aurangabad and as small patches in some other district.(**Fig. 7; Table 8.**)

3.2 SEASONAL FLUCTUATION

3.2.1 May 2015 to August 2015

Water level fluctuation between May 2015 and August 2015 has been analysed for 573 HNS to study the seasonal fluctuation of depth to water level, and its categorization in different depth zones. The analyses indicates rise in the water level in 533 (93%) HNS whereas the fall is observed only in 40 (7%) HNS located in Aurangabad, Bhojpur, Buxar, Darbhanga, Madhubani, Muzaffarpur, Nalanda, Nawada, Patna, Rohtas, Samastipur, Saran Sheohar, Sitamarhi, Siwan, and Supaul districts all are within the range of 0- 2 m. The majority of HNS (48%) have shown the rise of water level in the range of 0 to 2 m whereas the segment of 2 - 4 m has been observed in 33% HNS only and about 12% of HNS have shown rise in water level of more than 4m.

About 33% of the area of the State has shown rise in water level in the range of 0- 2 m which covers the major and bordering area of Madhibani Sitamarhi Sheohar Supaul Darbhanga Muzaffarpur and Siwan and few localised area. About 44% area of the state are categorised under the segment of 2-4 m rise, including Aurangabad, Gaya, Buxar, Bhojpur, Banka, Bhagalpur, Patna, Araria, Kishanganj, Purnia District. Fall has been observed at many locations as patches constitute only 3% area of the State which covers parts of Darbhanga, Samastipur, Saran, and Madhubani district. (**Fig.8; Table9**).

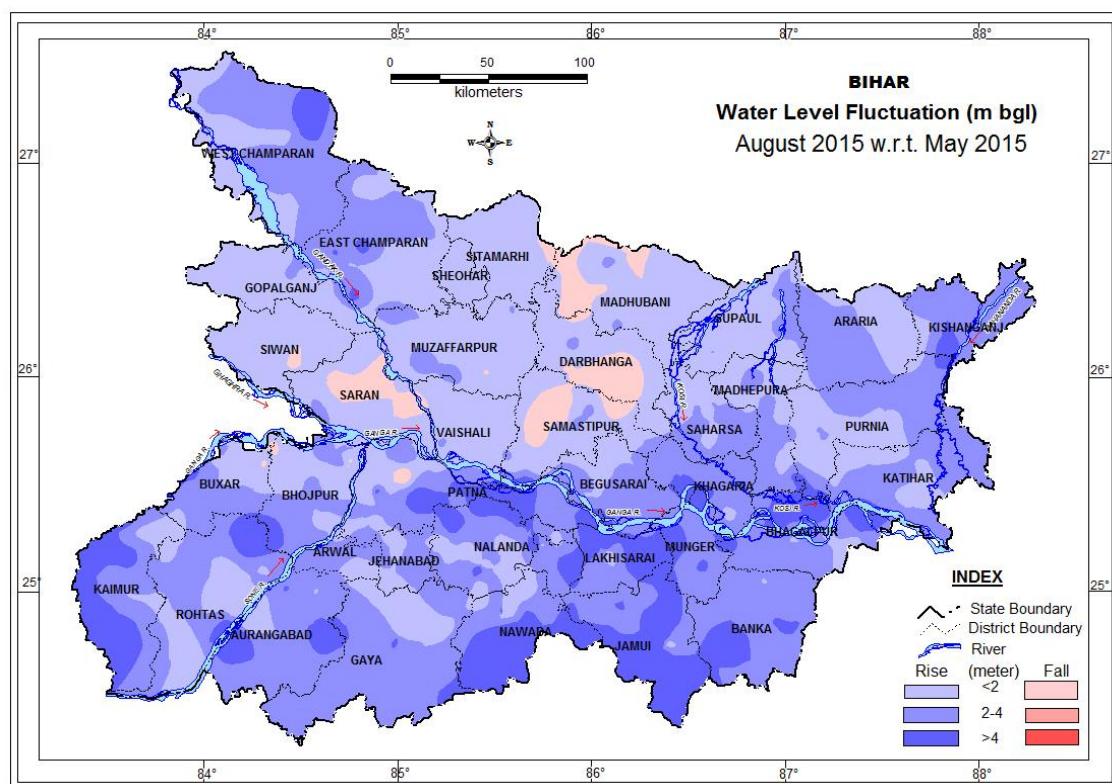

Fig. 8: Fluctuation in ground water level between May 2015 and August 2015

3.2.2 May 2015 to November 2015

Water level fluctuations between May 2015 and November 2015 has been analysed for 587 HNS. The rise of water level observed in 480 (82%) HNS ranged from 0.01 (Madhubani) to 8.47 m (Patna) whereas, only 97 (17%) HNS have shown fall in water level ranged from 0.02 (Nalanda) to 1.97 m (Banka). The majority of HNS (372 well, 63%) have shown rise in the range of 0-2 m whereas the 88 and 23 NHS have shown rise in water level in the range of 2-4 m and >4m respectively.

About 72 % area of the State has shown rise in water level. The 0-2 m segment has spread in the major part and a larger area in north-eastern part of NBP and in the adjoining part of Nawada Jamui Lakhisarai, Bhagalpur Munger and Gaya in SBP and in many other localised area of the State. About 18% area of the State spread in the major part of Nawada, Jamui, Gaya, Banka, and Lakhisarai and parts of Aurangabad, Rohtas Kaimur, Samastipur, E& W Champaran, Patna, and Purnia district has shown water level in the range of 2-4 m. The areas covering part of Nawada, Jamui, Lakhisarai, Munger, Samastipur, Kaimur, Rohtas, Aurangabad, EChamparan and Patna district are categorised in the segment of more than 4 m rise of water level. The fall is recorded as disseminated patches at many locations in the State. (**Fig 9, Table 10**).

3.2.3 May 2015 to January 2016

Water level fluctuation between May 2015 and January 2016 has been analysed for 574 HNS which indicates rise in water level in about 65 % (372 wells) of the HNS. The rise in water level in the range of 0 – 2 m in 57 % of the HNS, 2 – 4 m in 6% of the HNS and >4 m only in 1% HNS. The fall in water level has been observed in 186 wells (32%). 30%, 2% and 0.1% HNS have shown fall in the range of 0-2. 2-4, and >4m respectively. About 64% area has shown rise in water level up to 2m covers major part of Araria, Purnia, Katihar, Kishanganj, E & W Champaran, Gopalganj, Gaya, Jehanabad, Madhepura, Saharsa, and Darbhanga districts and some other parts of Bihar State. The range of 2 to 4 m rise has been observed in many localised areas constitutes about 8% area of the State which shown as patches in Nawada, Jamui, Lakhisarai, Banka, Munger Samastipur, and Gaya District. Only SBP has shown rise of water level more than 4m as patches in Jamui, Nawada, and Banka district. Including the part of Madhubani, Kishanganj, Muzaffarpur, Vaishali, Saran, Bhojpur, Buxar, Rohtas, and Kaimur district the fall in the segment of 0-2m has been shown as patches at many disseminated locations in the State. The range of 2-4 m fall is observed as small patcheses in Patna, Aurangabad, and Madhubani district. Only one location in Patna has shown fall of water level more than 4 m (**Fig. 10, Table 11**).

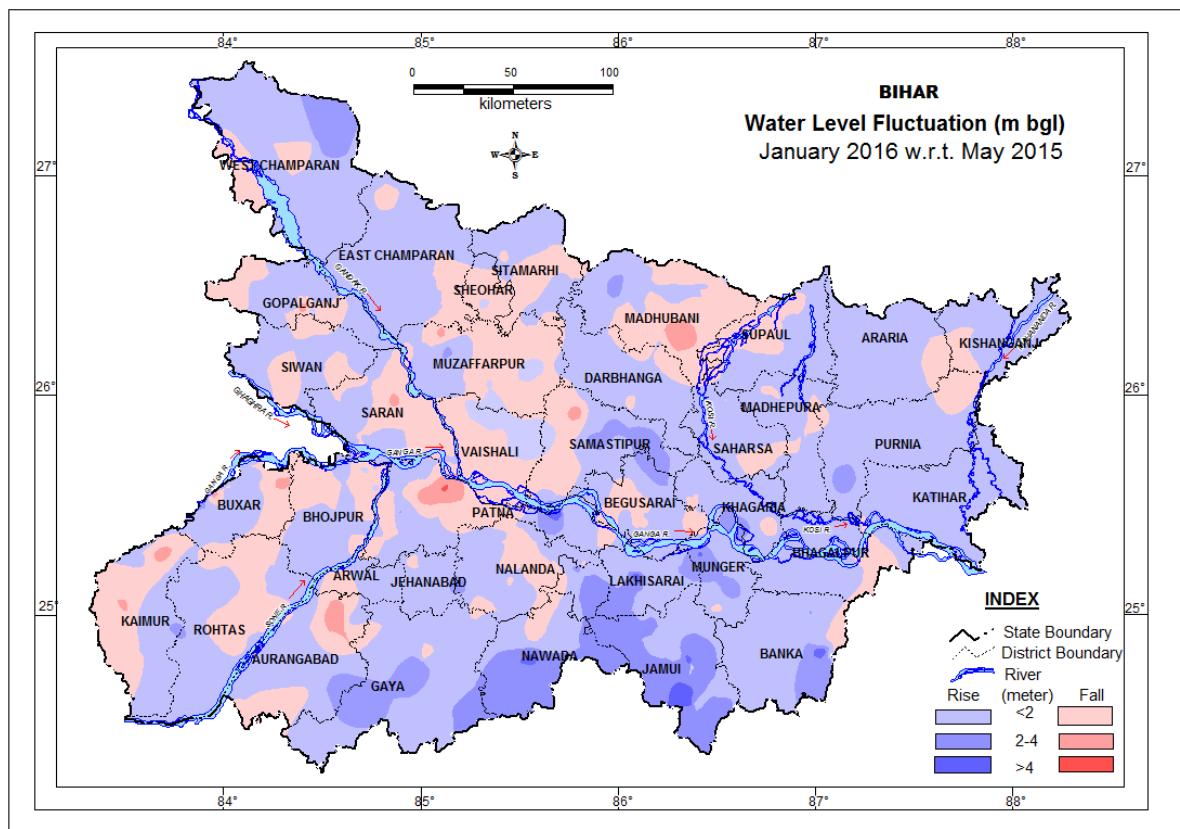

Fig. 10: Fluctuation in ground water level between May 2015 and Jan. 2016.

3.3.0 ANNUAL FLUCTUATION

3.3.1 May 2014 to May 2015

Fluctuation of ground water level between May 2014 and May 2015 of 441 HNS has been analysed which indicates rise in water level in 181 wells (41%) of the HNS and fall in water level in 255 No.(58%) of HNS. The rise has covered almost entire State. The rise to the tune of 0 – 2 m in 37% of HNS, in the tune of 2 – 4 m in the 4% and only 0.5% HNS has shown rise >4 m. The segment of >4m rise is observed in 02 NHS located each in Jamui and Nalanda district. The fall of water level in the segment of 0-2 m has been observed in the major and adjoining part of East Champaran, Bhojpur, Kaimur, Aurangabad, Buxar, Nalanda, Lakhisarai, Purnia, Katihar, Araria, and Darbhanga district and as patches at few locations. The fall of water level in the range of 2-4 m has been observed which spread in 5% area of the State occurred in Gaya, Nawada, Jamui, Patna, Munger, Lakhisarai, Nalanda, Kaimur and Banka district. Only small patches in Gaya, Nawada, Jamui and Banka district have shown fall of water level > 4 m. (**Fig. 11, Table 12**).

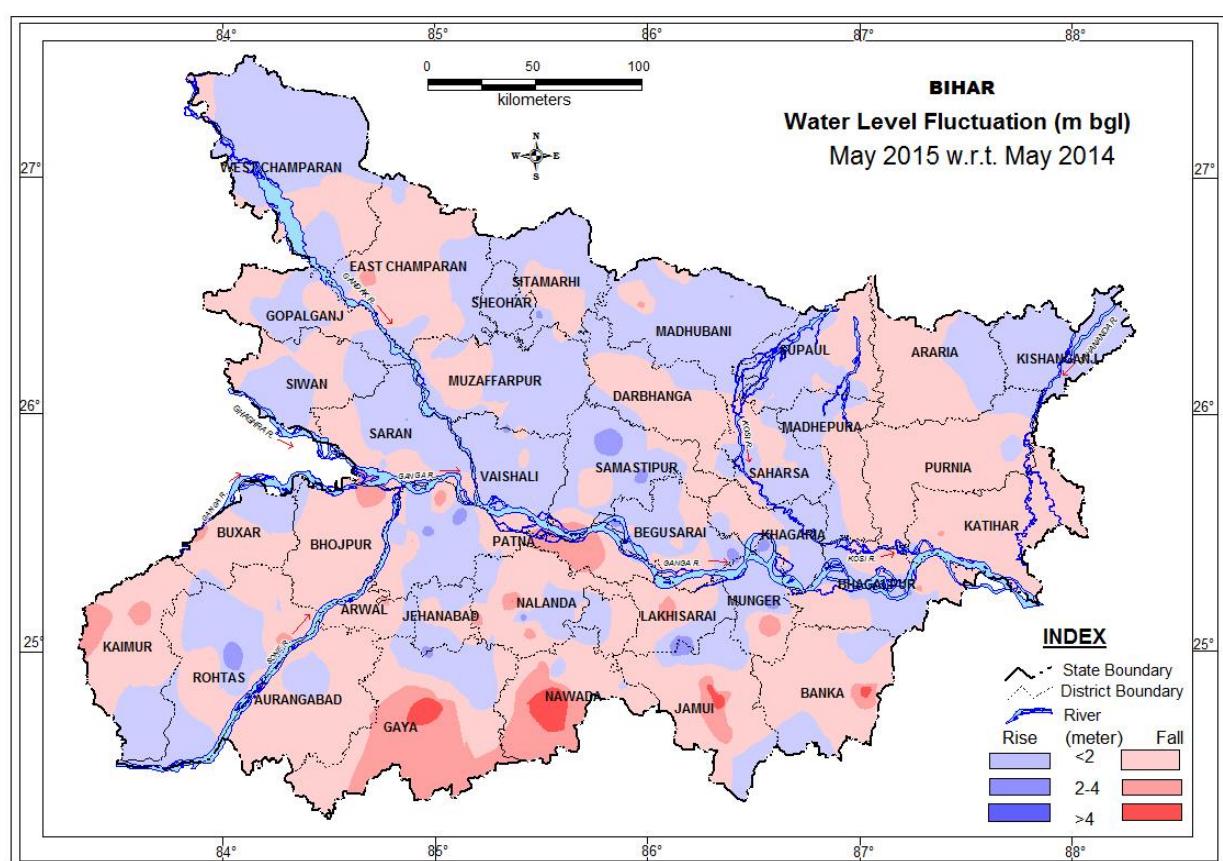

Fig. 11: Fluctuation in ground water level between May 2014 and May 2015

3.3.2 August 2014 to August 2015

Water level fluctuation between August 2014 and August 2015 has been analysed for 443 HNS, which indicates that the fall of water level is in about 69% of the HNS and rise in about 30% of the HNS. The rise of water level observed in the eastern part of the State except part of the Banka, Bhagalpur and Katihar district and as patches in eastern part, which spread in range of 0 – 2 m in 29% area of the State. The segment of rise in water level 2–4m had covered the only some patches in Purnia, Katihar, Bhagalpur, Jehanabad, and Arwal districts.

About 61 % area of the State has shown fall in water level to the tune of 0 to 2 m spread in western part of the State and in the eastern Bihar in part of Supaul Banka, Bhagalpur Katihar Munger and Jamui district. The segment of fall in the range of 2 to 4 m has been covered major part of the state, except eastern part and some patches in districts of western part like Gaya, Aurangabad, Kaimur, Buxar, East Champaran. Only 06 wells located in Aurangabad, Jamui, Nalanda, Samastipur, and Saran district have shown fall more than 4 m. (**Fig. 12, Table 13**).

3.3.3 November 2014 to November 2015

Water level fluctuation between November 2014 and November 2015 has been analysed for 462 HNS, which indicates that there is a rise of water level in about 17% of the HNS and fall in about 83% of the HNS. The rise of water level of 0-2 m range spread in 9% area covers the parts of Kishanganj, Purnia, Katihar, Bhagalpur, Aurangabad, Arwal, Jehanabad, Patna, Kaimur, and Samastipur districts and some other parts . The segment of 2 to 4m and >4m rise has been observed only in Aurangabad district.

Almost entire part of the state (80%) except some patches in eastern and central part is covered by the segment of 0-2m fall in water level. Area covering the parts of Vaishali, Patna, Bhojpur, and Saran, kaimur, Sitamarhi, East Champaran, Darbhanga, and Muzaffarpur district and as patches at few locations has shown the fall of water level 2- 4 m. The range of > 4 m fall has been observed in Nalanda, Gaya, Kaimur and Rohtas district as patches. (**Fig.13, Table 14**).

3.3.4 January 2015 to January 2016

Water level fluctuation between January 2015 and January 2016 has been analysed for 455 HNS. The rise of water level ranged from 0.02m (Supaul) to 5.98 m (Aurangabad) has been observed in 78 wells (17%) whereas the fall in water level was between 0.01 and 4.59m noticed in 373 Well (82%). The rise to the tune of 0 to 2 m has been shown in 9% area of the State spread as patches in Kishanganj, Jamui, Lakhisarai, Munger, Saharsa, Muzaffarpur and Aurangabad district.. The segment of 2 to 4 m is observed in localised area in part of Banka and Aurangabad district. No well has shown water level rise more than 4m.

The fall in the range of 0 – 2 m, 2 – 4 m and > 4m has been observed in 62%, 18 % and 2% of HNS respectively. The fall ranged from 0 to 2 m has covered almost entire area (76%) of the state except parts of Kishanganj, Banka, Araria, Patna, Vaishali, Muzaffarpur, Sitamarhi, Sheohar, Kaimur Jamui and Gaya district. The segment of 2 to 4 m has been calculated for only 82 wells covers the area as patches in part of Kaimur, Buxar, Patna, Gaya, Vaishali, Muzaffarpur, Sitamarhi, Madhubani and Jamui district and some other parts. Only 10 wells analysed have shown fall of water level more than 4 m located in Rohtas, Kaimur, Gaya, Jamui, Munger, and Patna district. (**Fig.14, Table 15**).

3.4 DECADAL FLUCTUATION

3.4.1 Decadal Mean of May to May 2015

Fluctuation in water level of May 2015 with respect to decadal mean of May has been analysed for 482 HNS, which indicates rise in 53% and fall in the 45% of the analysed HNS. The major area (49%) of the state has shown rise in the tune of 0 – 2 m which observed in the 48% of the HNS analysed, spatially covers the major and adjoining part of E & W Champaran, Sitamarhi, Madhubani, Madhepura, Saharsa, Darbhanga, Muzaffarpur, Gopalganj, Siwan, Saran, Vaishali, Bhojpur, Rohtas, Jehanabad, Patna, Nalanda, Jamui, and Munger district and as patches at many locations. In only 18 HNS located in Lakhisarai, Sheikhpura, Samastipur, Sheohar, Rohtas, Aurangabad, and Munger district has shown rise in the tune of 2-4 m. Only 3 wells located each in Nalanda, Rohtas, and Sheikhpura district has recorded rise more than 4m. The major area (45% area) of the State has shown fall in water level less than 2 m whereas the segment of 2 – 4 m observed in only 4% (18 Nos.) NHS covered the area as patches mostly in SGP. The fall of water level more than 4m has been recorded in only 8 wells located in Jamui, Gaya and Patna district. (**Fig.15, Table 16**).

3.4.2 Decadal Mean of August to August 2015

Fluctuation in water level of August 2015 with respect to decadal mean of August has been analysed for 466 HNS, which shows fall in water level in the 59% of HNS and rise in the remaining 41% of HNS. The rise in the range of 0 – 2 m has been observed in 38% of the HNS, spatially covers the major area in eastern part of the State and localised area in northern and southern part. The range of 2 to 4 m rise has been recorded as patches at many locations and in an area including the adjoining part of Sheikhpura, Purnia, Banka, and Jamui district. Only 1 well located in Sheikhpura district has shown rise more than 4m. About 52% area of the State has shown fall of water level in the range of 0 to 2m spread in the parts of Madhubani, Darbhanga, Sitamarhi, Nalanda, Begusarai, Vaishali, Muzaffarpur, Saran, Gaya, Aurangabad, Bhojpur, Buxar, Rohtas, Siwan, Gopalganj, and E& W Champaran district. The range of 2 to 4 m rise has been recorded as patches at many locations and in an area including the adjoining part of Darbhanga, Samastipur, Muzaffarpur, Vaishali, Saran, Rohtas, Kaimur, Gaya, and Aurangabad district. The fall of water level more than 4m has been recorded only in 5 wells located in Saran, Samastipur, Rohtas, and Kaimur district. (**Fig.16, Table 17**).

3.4.3 Decadal Mean of November to November 2015

Fluctuation in water level of November 2015 with respect to decadal mean of November has been analysed for 481 HNS, which shows rise in water level ranged from 0.01 to 4.66 m in 20% of the HNS and fall in the remaining 80 % of HNS. The rise in the range of 0 – 2 m and 2 – 4 m has been observed in the 19% and 1% HNS. No well shows rise >4m. The rise up to 2m has been observed in 15% area and spread as patches in Purnia, Katihar, Kishanganj, Saharsa, Patna, Gaya, Nalanda, Gopalganj, and E & W Champaran district and some other places. Except few patches almost entire area of the State (74%) is covered by the segment of 0-2m fall. 2-4m fall observed in 4% of HNS. The fall in water level >4 m has been observed in only 10 station located in Kaimur, Aurangabad, Muzaffarpur, Jamui Darbhanga and Banka district. (**Fig. 17, Table18**).

3.4.4 Decadal Mean of January to January 2016

Fluctuation in water level of January 2016 with respect to decadal mean of January has been analysed for 468 HNS. In 24% of the HNS, rise in water level is recorded and remaining 76% HNS fall in water level has been observed. The rise in the range of 0 – 2 m has been spread in 16% area of the State, and covered the major part of Lakhisarai, Sheikhpura, Saharsa and small patches in some other districts. The segment of 2-4m rise has been observed as patches in Aurangabad and Sheikhpura district. Only 2 wells located in Aurangabad and Supaul has shown rise more than 4m. About 71% area of the State has shown fall in the tune of 0 to 2 m including almost entire part of the state except some patches in eastern part. The segment of 2-4m fall has been observed as patches in Kaimur, Rohtas Buxar, Gaya, Patna, Muzaffarpur, Madhubani, and Bhagalpur district. Parts of Kaimur, Rohtas, Gaya, Patna, Muzaffarpur, and Aurangabad has shown fall of water level more than 4 m.(**Fig. 18, Table 19**).

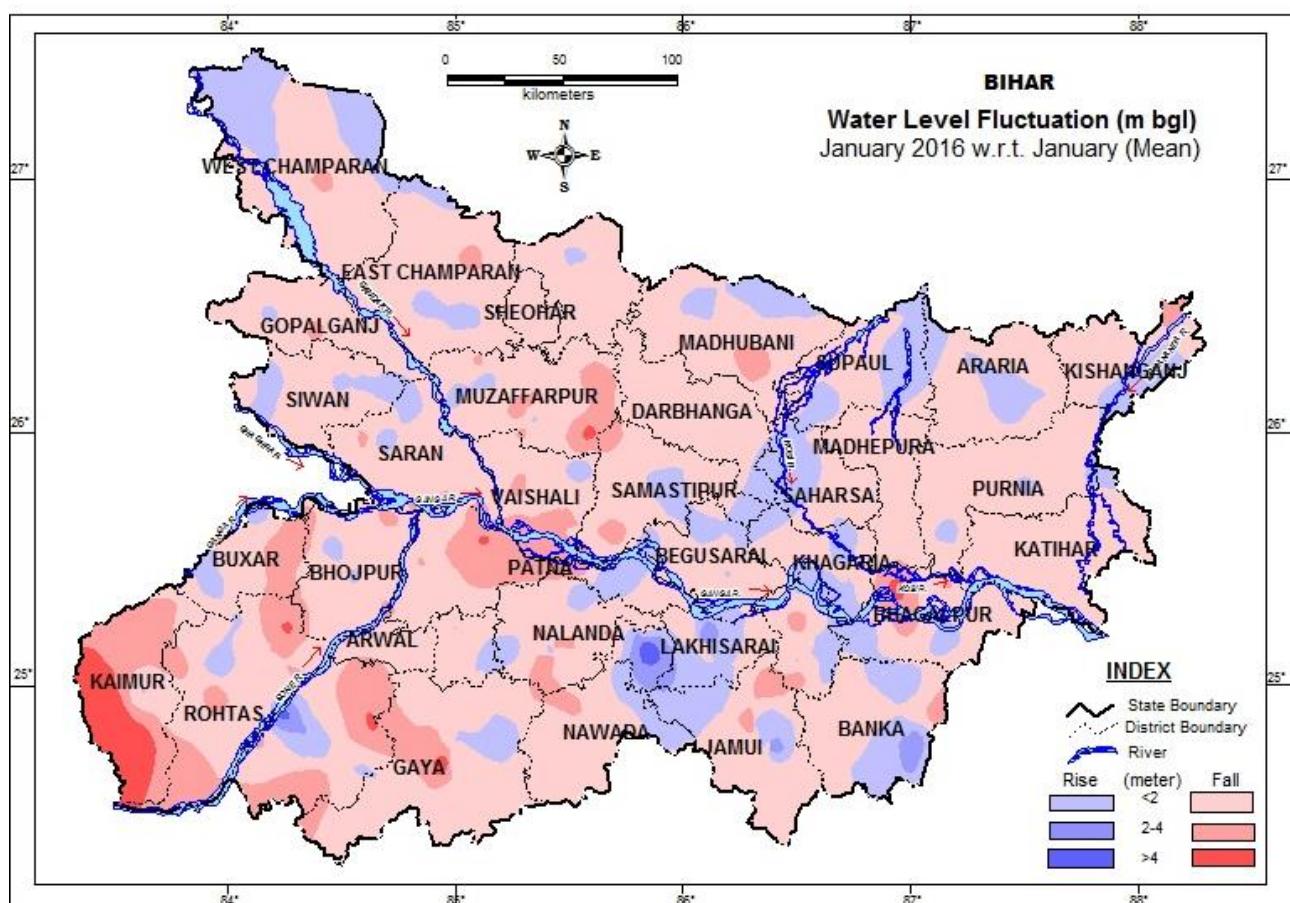

Fig. 18 Fluctuation in water level between Jan. (mean) and Jan. 2016

Table – 19 District-wise categorization of fluctuation and their frequency of water levels of HNS of Jan. 2016 w.r.t. Jan. mean (2006-2015) for Bihar State

4. HYDROCHEMISTRY

In order to assess the chemical quality of ground water of phreatic aquifers of Bihar 521 ground water samples have been analysed for 16 major parameters viz. EC, pH, TDS, HCO₃, CO₃, Cl, F, NO₃, PO₄, SO₄, TH, Ca, Mg, K, Na, SiO₂. The results of the completed chemical analysis of the ground water samples are given in Annexure-II. A perusal of the Annexure-II indicates that the water is by and large suitable for domestic and drinking purposes. The pH of ground water mostly lies between 7 and 8 except few districts. Some locations in Begusarai, Darbhanga, Gopalganj, Jamui, Madhepura, Nalanda, Nawada, Patna, Saharsa, Samastipur, Saran and Siwan district has pH 9 and one location of Sheikhpura has pH 10. Majority of the ground water samples are mildly alkaline in nature. As shown in EC map of the state, Major part shows EC value within the Range of 250-750 which covers major part of E & W Champaran, Madhubani, Sitamarhi, Araria, Kishanganj, Katihar, Purnia, Banka, Gaya, Aurangabad, Kaimur, Rohtas district and many other places. A few patches in SBP shows EC value >2250 includes small parts of Gaya, Nalanda, Jamui, Lakhisarai, Jehanabad districts. (**Fig.19**)

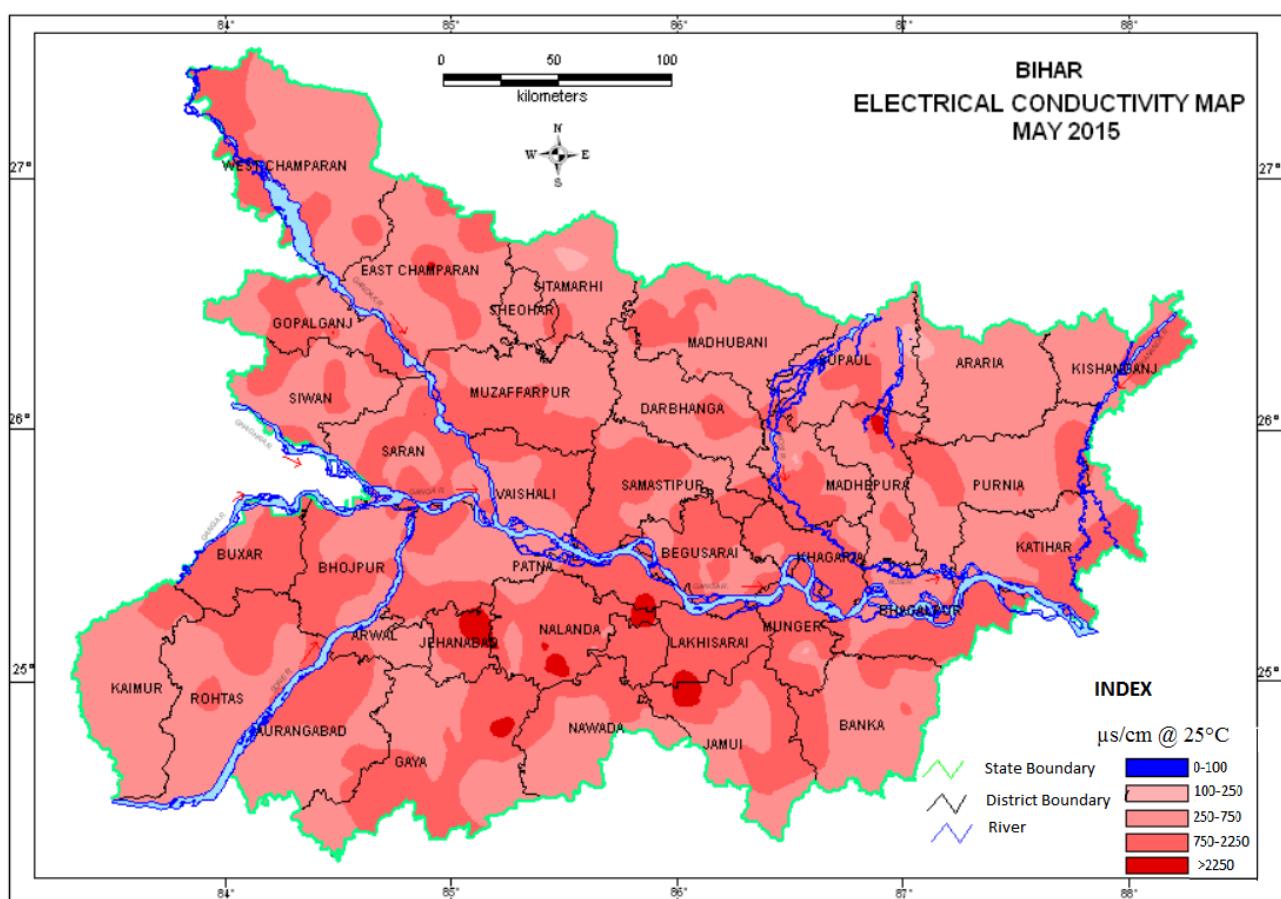

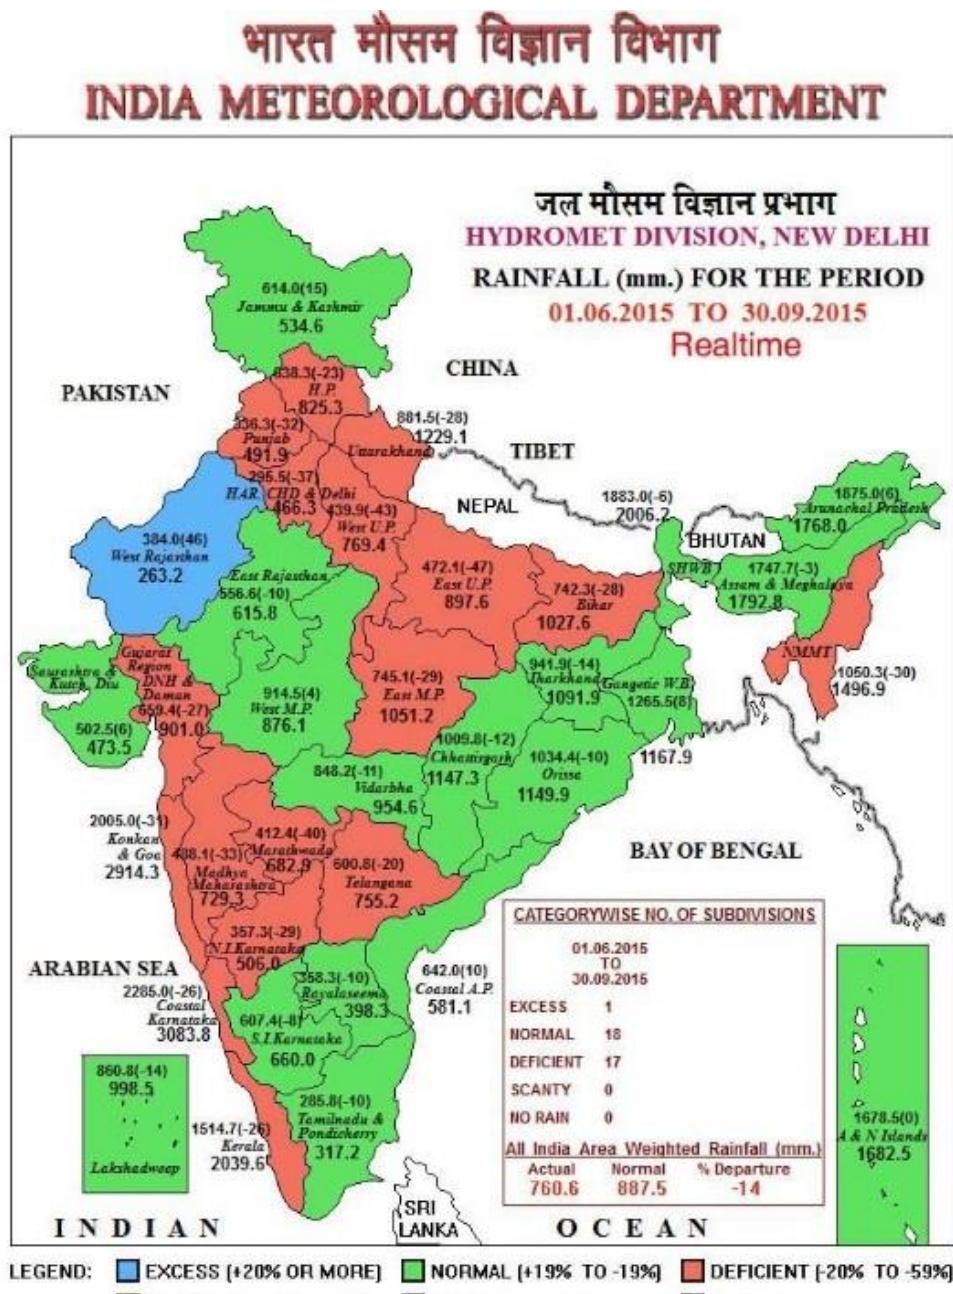

Fig. 19 Electrical Conductivity Map, 2015

5. RAINFALL

The map prepared by IMD shows that Bihar received deficit rainfall during the monsoon period. The same has been reflected in unconfined aquifers. During the year 2015 the State has received only 742.3 mm rainfall which is about 28% less than normal monsoon (**Fig.20**) (*Source: IMD*). Therefore 69% of HNS well have shown fall in water level in August 2015 while compared to August 2014.

Source: IMD

Fig.20 Rainfall for the period 01.06.2015 to 30.09.2015

6.0 TREND ANALYSIS DURING PRE AND POST MONSOON

Trend of the ground water level for the last ten year (2006-2015) have been analyzed. District wise percentage of well showing rise, fall or no significant trend during pre- monsoon and post monsoon season has been given in the Annexure – III. Total 23 districts have shown long term water level trend more than 50% of the HNS is showing the falling trend during the pre-monsoon period whereas during post monsoon period 28 districts are also showing falling trend in more than 50% of the HNS analysed.
