GROUND WATER YEAR BOOK, BIHAR

(2019-2020)

ABSTRACT

Monitoring of ground water levels from 729 Hydrograph Network Stations (HNS) were carried out in the year 2019-2020 with an objective to assess ground water regime of phreatic aquifer. The water level monitoring was carried out in the months of May'19, August'19, November'19, and January'20. The ground water samples from the HNS were collected in the month of May'19 for chemical analysis. The water level in the HNS represented phreatic aquifer.

The observed water level data had been grouped into four categories viz. 0-2 m, 2-5 m, 5-10 m and >10 m. Thematic maps depicting ground water levels measured in different periods had been prepared. The water levels had been further analysed for study of its change with respect to measurement of pre-monsoon period of the same year, previous year water level data of the same period, and decadal mean water level data of the same period. The fluctuation had been grouped under rise and fall categories. In each category there are three groups viz. 0-2 m, 2-4 m and >4 m. Thematic maps had been prepared for each category of fluctuation.

During pre-monsoon 2019 the ground water levels were found to vary between 0.74 and 16.11 m bgl. The depth to water level rests in range of 2-5 m bgl is 34% of HNS, which spatially covers covering northern part of NBP and as patches of SBP, and depth to water level rests in range of 5-10 m bgl is 57% NHS wells which spatially covers southern part of North Bihar Plains (NBP) and maximum part of South Bihar Plains (SBP). During post-monsoon 2019, water level rested in the range of 2 – 5 m bgl in 55% of the HNS which covers major part (67% area) of the state. The fluctuation of water level between pre and post-monsoon 2018 indicated rise in water level in 97% of the HNS. Annual change of water level of May 2019 with respect to May 2018 indicated rise in water level in 39% of the HNS, and during November 2019 with respect to November 2018 indicated rise in 81% of the HNS. The change in water level of May 2019 with respect to the decadal mean of May (May 2009 to May 2018) indicated fall in 68% of the HNS and during November 2019 with respect to the decadal mean of November (November 2009 to November 2018) indicated rise in 78% of the HNS.

GROUND WATER YEAR BOOK, BIHAR

(2019-2020)

1. INTRODUCTION

Bihar state lies between $83^{\circ} 20'$ and $88^{\circ} 00'$ E Longitudes and $24^{\circ} 15'$ and $27^{\circ} 23'$ N Latitudes. It shares international border with Nepal in the north and is bounded in the east, west and south by West Bengal, Uttar Pradesh and Jharkhand states respectively. The state covers geographical area of 94,163 Sq.km and has its capital at Patna (*Fig 1*).

Administratively the state is divided into 38 districts and 534 community development blocks. The population of the state is 10.41 crores (2011 census). Population density is 881 persons/Sq.km. The urban population is 11,758,016 and rural population is 92,341,436. There are 150 small and large towns in the state. The distribution of urban population is highly skewed as only three towns namely Gaya, Bhagalpur, and Muzaffarpur are having population of more than 3 lakhs, besides urban population of Patna urban agglomeration which is having 1,683,200.

2. HYDROGEOLOGY

The generalized stratigraphic succession of the state is presented in Table 1. The hydrogeological map of Bihar is depicted in *Fig 2*.

Table 1. Generalized geological succession of Bihar.

<i>Age</i>	<i>Formation</i>	<i>Broad Lithology</i>
Quaternary	Alluvial Deposits	Sand, clay, silt and occasional gravel
Tertiary	Siwaliks	Sandstone, conglomerate, clay stone, gravel
L-Cambrian	Vindhyan Super Group	Sandstone, limestone.
Proterozoic	Chotanagpur Granite Gneiss	Granite, granitic-gneiss, schist, phyllites, dolomites, basic rocks, amphibolites.
Archean	Bihar Mica belt	Gneiss, Pegmatites etc.,

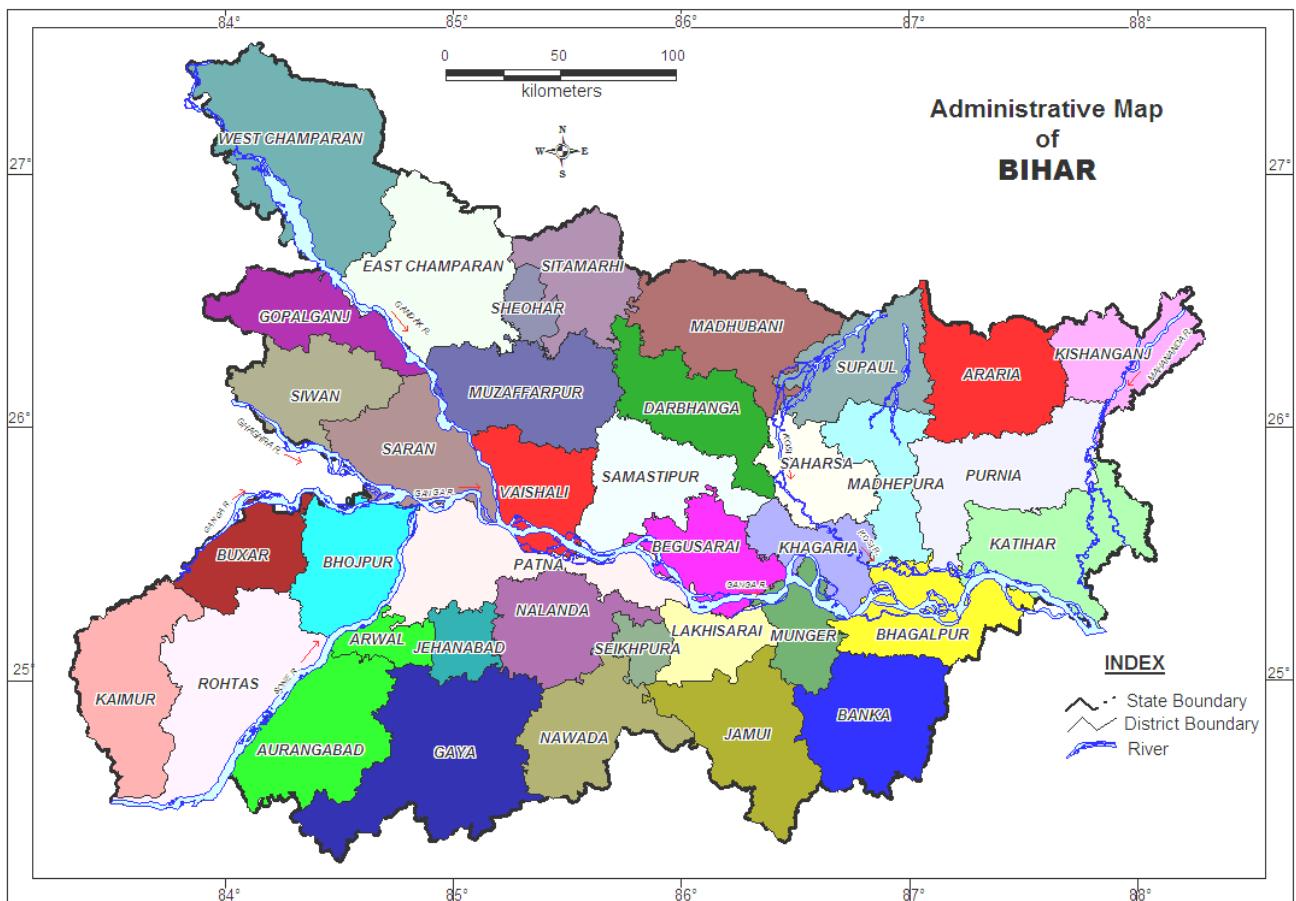

Fig. 1 Administrative Map of Bihar state

Pre-cambrians

The rocks belonging to Proterozoic and Archean age are granite, granitic-gneiss, quartzite, phyllites, slates, and metabasics. Rocks of Chhotanagpur Granite Gneissic Complex (CGGC) suit occur in the form of small strip in the districts bordering Jharkhand state. Meta-basic rocks intrude the Chhotanagpur Granite Gneiss Complex suit of rocks. Mica bearing pegmatite of Bihar Mica Belt has been found in Gaya, Nawada and Munger districts. In parts of Munger, Gaya and Nawada districts the meta-sedimentary rocks (viz. phyllite, schist and quartzite) of Pre-cambrian age are also found.

The occurrence and movement of ground water is controlled by the thickness and nature of weathered mantle and saprolite zone (a transition zone between weathered residuum and fresh basement), besides fractures lying underneath the weathered residuum. Thickness of the weathered zone usually ranges from 5 to 20 m. Thickness of weathered zone is more in schist and other meta-sedimentary rocks in comparison to the granite-gneiss. The weathered product of granite and granite-gneiss is marked by presence of coarse granular materials composed of quartz and feldspar, whereas those of schist and phyllite by clayey materials.

Ground water occurs under unconfined condition within the weathered mantle and saprolite zone. In the secondary porosities imparted by joints, cracks and fractures, ground water occurs under confined to semi-confined conditions.

Vindhyan

Rocks of Vindhyan Super-group are confined in the west and north of the river Sone and forms eastern end of the Kaimur Plateau. It occurs in the parts of Rohtas, Kaimur and Aurangabad districts. The width of the Vindhyan rocks becomes less than 3 km near Sasaram in Rohtas district. Rocks found under this super-group are mainly sandstone, limestone, quartzite and schist. These rocks behave as consolidated formation and have remained unaffected by any large-scale tectonic disturbances, except faulting at a few places in the geological past. Vindhyan sandstones are compact and have low primary porosity. Ground water in this occurs within the weathered residuum and in the secondary porosity below them. Ground water occurs under unconfined condition in the weathered mantle. The thickness of the weathered residuum varies from 5 to 10 m.

Siwaliks

The Siwaliks of Upper Tertiary age occur as small patches in northwestern corner of the state in West Champaran district bordering Nepal. It consists of sandstone, conglomerate, red clay and spongy limestone and forms structural hills with a number of faults crisscrossing them. Ground water occurs under confined conditions in sandstones disposed at depth.

Quaternary alluvium

Quaternary sediments of Recent to Sub-Recent age cover about 89 percent of the geographical area of the state. They occupy entire north Bihar plain, and a vast stretch of land between south of the river Ganga and the Chhotanagpur Plateau. Deep exploratory drilling by Central Ground Water Board has confirmed thickness of sedimentary deposits in north Bihar plain as more than three hundred meter. In the south of the river Ganga, the alluvial thickness gradually decreases to as low as 50 m or even less, towards the area bordering the Jharkhand state. The sedimentary deposit consists of alternate sequences of sand and clay layers representing multi-cyclic nature of sedimentation. The Quaternary alluvial deposit spread over south and north of the river Ganga is a part of Mid-Ganga Plain. The Terai belt, which is demarcated by auto-flow wells, occurs as a narrow strip in the bordering areas in Madhubani, Darbhanga, and West

Champaran districts. It is an extension of Terai belt of Nepal which coalesces with alluvial plain. Ground water occurs under unconfined conditions in the phreatic aquifer, which is generally disposed within 70 m below ground. Aquifers situated at deeper levels have ground water levels under confined condition.

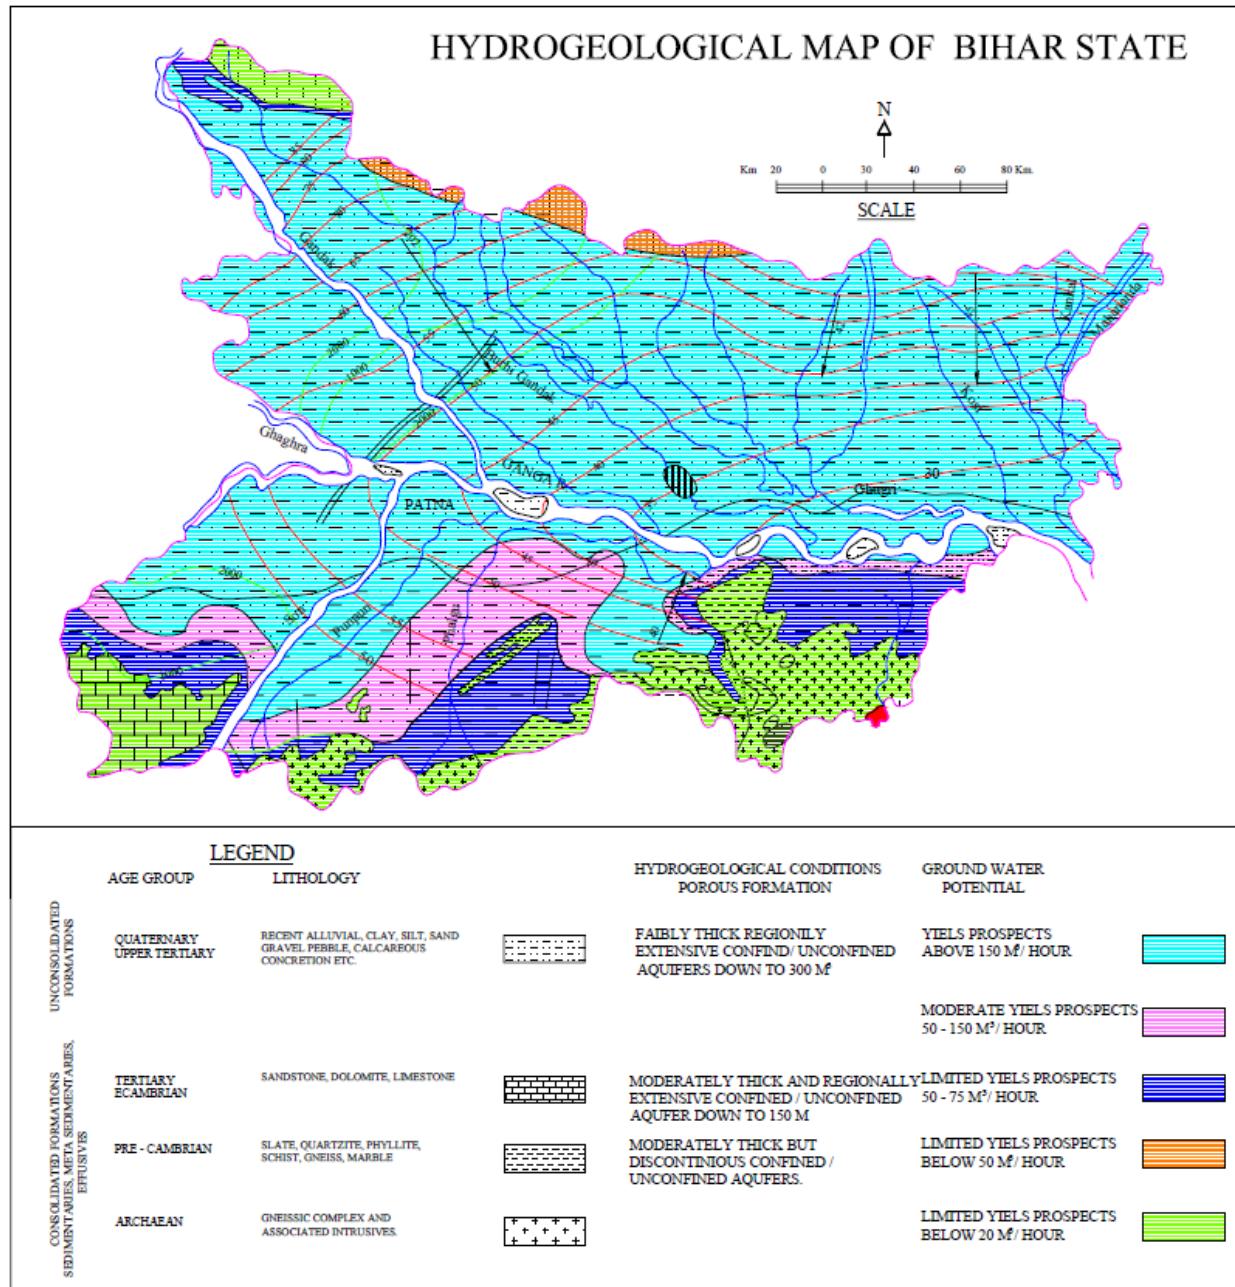

Fig. 2 Hydrogeological Map of Bihar state

3. GROUND WATER SCENARIO

A total of 736 Hydrograph Network Stations (HNS) which are dug wells tapping phreatic aquifer has been monitored as a part of ground water regime monitoring in the state of Bihar. Majority of the wells represent phreatic alluvial aquifer. The district wise location and distribution of the HNS are given in **Fig 3** and **Table 2** respectively.

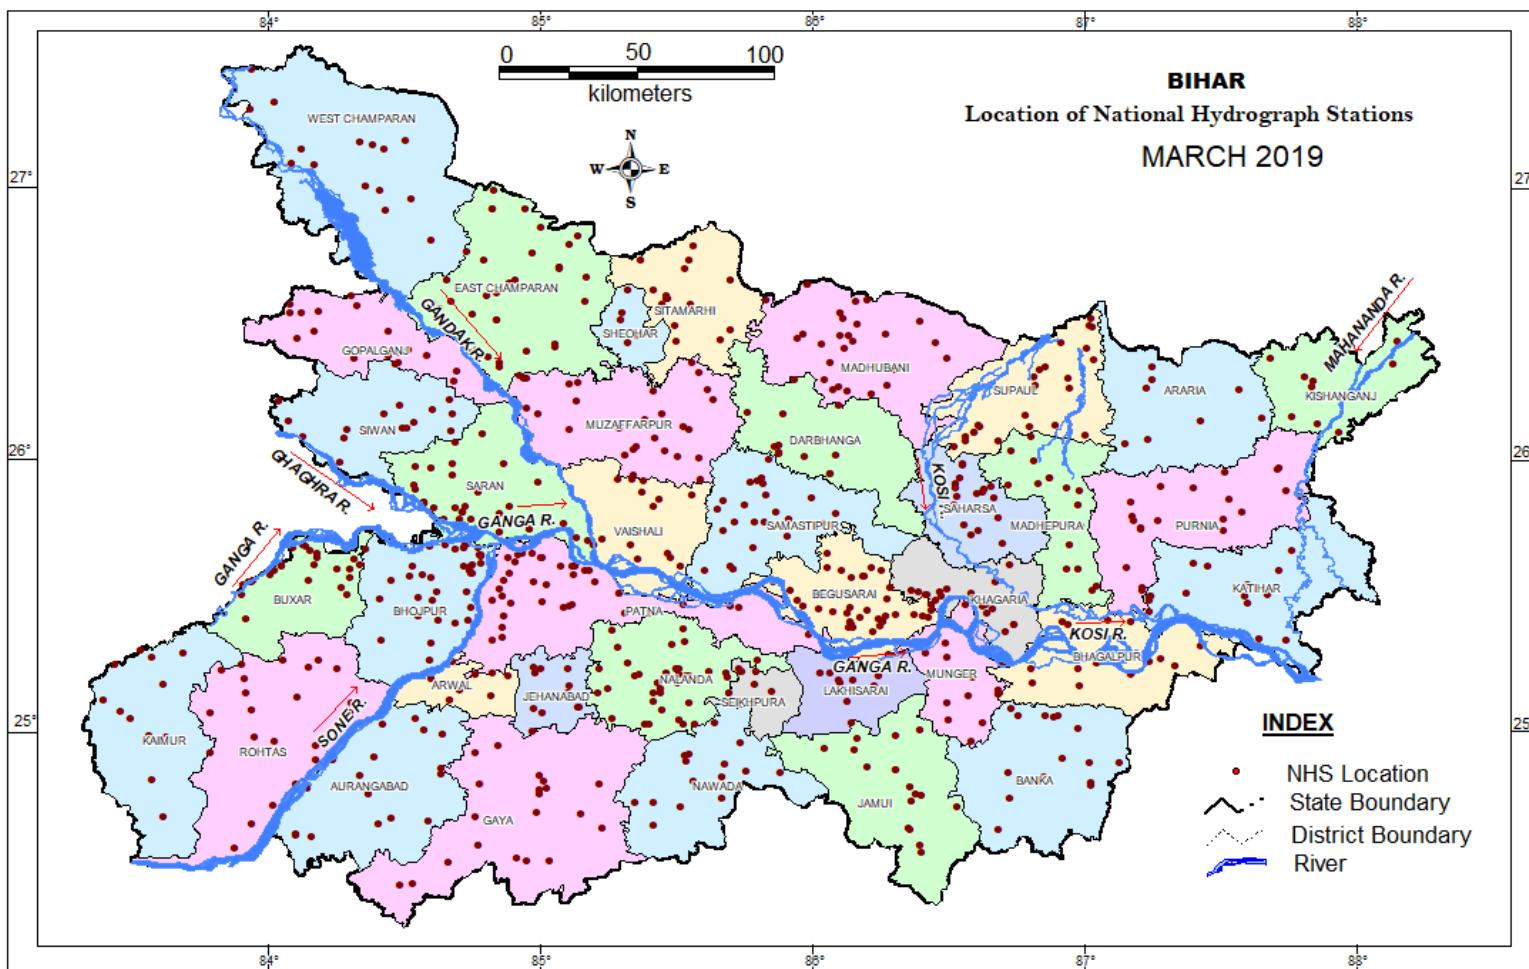

Fig. 3 Location of Hydrograph Network Stations in Bihar state, 2019

The numbers of HNS monitored in the state as per the following monitoring schedules:

Table 3 HNS monitoring schedule

Sl. N.	Month	Date	Period
1	May	20 – 30	Pre-monsoon
2	August	20 – 30	Mid-monsoon
3	November	1 – 10	Post-monsoon
4	January	1 – 10	Recession

The Number of HNS monitored during the various monitoring period is given in **Table-4**. The water level data of HNS are presented in the Annexure I. The data were analysed for each set of measurement and the thematic presentation of depth to water level and its fluctuations have been prepared in the range of 0 – 2 m, 2 – 5 m, 5 – 10 m and more than 10 m using GEMS software. Bihar state has been broadly divided into North Bihar Plain (NBP) consisting of areas falling to the north of the river Ganga and South Bihar Plain (SBP) consisting of areas falling to the south of the river Ganga and bordering Jharkhand state.

Table 4 Number of HNS monitored/analysed during different months

State	May'19	August'19	November'19	January'20
Bihar	649	630	647	679

3.1 DEPTH TO WATER LEVEL

3.1.1 May 2019

During Pre- Monsoon period (May 2019), 649 HNS were analysed. The Minimum depth to water level is 0.74 m bgl has been observed at, E Champaran district, and maximum is 16.11 m bgl at Buxar district. The depth to water level rests in range of 5 – 10 m bgl in 57% of the area of Bihar State, which spatially covers southern part of North Bihar Plains (NBP) and maximum part of South Bihar Plains (SBP). The depth to water level rests in the range of 2-5 m bgl in about 34% of the area covering northern part of NBP and as patches of SBP. In ~ 6% of area, water level > 10 m bgl has been recorded, which distributed as isolated patches mainly in Kaimur, Rohtas, Jamui, Bhagalpur, Buxar, Nalanda and Siwan district. In only 10 Hydrograph Network Station (HNS) shows the depth to water level < 2 m bgl has been recorded.

3.1.2 August 2019

During mid-monsoon (August 2019), total 630 HNS were monitored. The depth to water level has been found to vary between 0.04 m bgl (Muzaffarpur district) and 14.00 m bgl (Aurangabad disrtict). The depth to water level varies in the range of 0 – 2 m bgl covers in about 18% area due to monsoon rainfall. It spatially covers the bordering area of E & W Champaran, Sitamarhi, Madhubani, Supaul, and Kishanganj district, small parts of Rohtas, Darbhanga, Kaimur, Aurangabad, Gaya, Nawada, Banka, Munger, Patna, Jamui and Bhagalpur districts and as patches in many other part of the State.

Range of depth to water level 2-5 m bgl covers major part (56%) of the state including southern part of NBP and maximum part of SBP except some small patch like area. Parts of Saran, Siwan, Muzaffarpur, Vaishali, Samastipur, Buxar, Kaimur, Rohtas, Aurangabad, Jehanabad, Nalanda, Nawada, Sheikhpura, and other part as patches, the depth to water level rests in the range of 5 to 10 m bgl which forms about 25% of the area of the State. Only 13 wells district have shown water level more than 10 m bgl.

3.1.3 November 2019

Total 647 HNS wells were analysed during post-monsoon period (November 2019). The minimum and the maximum depth to water levels have been recorded as 0.02 m bgl (Rohtas district) and 14 m bgl (Aurangabad district) respectively. In major area of the State (67%) water level rests in range of 2 – 5 m bgl which covers almost entire Southern part and major part of Northern part of Bihar State. The depth to water level in the range of 5-10 m bgl occurs in about 12 % of the area, which occurs in part of Kaimur, Rohtas, Gaya, Jmaui, Sheikhpua, Nalanda, Patna, Samastipur, Vaishali, and Muzaffarpur districts and many other places as small patches. The water level in the range of 0 – 2 m bgl has been observed in only 28% of HNS wells, spatially covers as small patches at many locations (Sitamarhi, Madhubani, Araria, Kishanganj, Bhagalpur, Banka, Aurangabad, Rohtas, Buxar and W Champaran district, and many small parts of the state) There are 5 HNS stations in Rohtas, Jamui, E Champaran, Nalanda, and Aurangabad where level has been observed more than 10 m bgl. (**Fig. 6; Table 7**).

3.1.0 January 2020

During the recession period (Jan. 2020), 679 HNS were analysed. The minimum depth to water level of 0.32 m below ground level (bgl) has been observed in Aurangabad district, and maximum water level of 15.8 m bgl has been observed in the Jamui district. The depth to water level rests in range of 2 – 5 m bgl in maximum part (72% area) of Bihar State. The depth to water level rests in the range of 5 – 10 m bgl in 22% of the area covering adjoining area and major part of Lakhisarai, Muzaffarpur, Saran, Samastipur, Begusarai, Aurangabad, Rohtas, Kaimur, Gaya, Nawada, Jamui, Sheikhpura, Buxer and many locations as patches. Only in 13 wells shows depth to water level >10m bgl has been observed. (**Fig.7; Table 8**).

3.2 SEASONAL FLUCTUATION

3.2.1 May 2019 to August 2019

Water level fluctuation between May 2019 and August 2019 has been analysed for 577 HNS to study the seasonal fluctuation of depth to water level, and its categorization in different depth zones. The analysis indicates rise in the water level in 539 (93%) HNS whereas the fall is observed only in 38 (7%) HNS. Majority of HNS (44%) have shown the rise of water level in the range of 0 to 2 m constituting 44% area of the State including maximum part of NBP and in some parts of SBP. Major parts of Darbhanga, Araria, Purnia, Katihar, Kishanganj, Samastipur and Madhepura district in NBP and Nalanda, Nawada, Gaya, Bhagalpur, and Banka district in SBP and many other small parts of the state, have shown rise in water level upto 2m. Rise of water level from 2 to 4 m has been recorded in 28% (160 wells) NHS wells, covering major parts of Buxar, Bhojpur, Saran, Siwan, Vaishali, Aurangabad, Gaya, Jamui, Kaimur, Rohtas and E Champaran districts and some other parts as small patches. Only 19% of HNS have shown rise in water level of more than 4m. In major part of Kaimur, Rohtas, Aurangabad, Gaya, jehanabad, Patna, Jamui, Banka, and Lakhisarai district and other small parts of the state have shown rise of water level more than 4m has been recorded.

Total 28 wells have shown fall in water level <2m covering small parts of Smastipur, Lakhisarai, Bhagalpur, banka, Jamui, Nawada, Aurangabad, Katihar and Darbhanga district. Only 1 wells located in Banka district shows fall in water level in the range of 2-4 m. 6 wells have shown water level fall >4m. (**Fig.8; Table 9**).

3.2.2 May 2019 to November 2019

Water level fluctuations between May 2019 and November 2019 has been analysed for 582 HNS. The rise of water level observed in 563 (97%) HNS ranged from 0.05 (Buxar) to 14.36 m (Buxar) whereas, only 19 (03%) HNS have shown fall in water level ranged from 0.08 (W Champaran) to 4.2 m (Patna). The majority of HNS (214 well, 36%) have shown rise in the range of 2-4 m, whereas the 182 and 167 NHS have shown rise in water level rise >4m m and upto 2m respectively.

About 99 % area of the State has shown rise in water level. The 2-4 m segment covering 41% area of the state has spread in the major part of NBP and in SBP, major part of Nalanda, Nawada, Gaya, Aurangabad, Bhojpur, Muzaffarpur, Darbhanga, Smastipur Goplaganj and E Champaran district and many other localised area of the State. About 28% area covering major part of SBP and parts of Araria, Purnia, Kishanganj, Supaul, Saharsa, Madhepura and Katihar district in NBP has shown water level rise in the range of 0-2 m. The areas covering part of Banka, Bhagalpur, Munger, Lakhisarai, Nawada, Aurangabad, Rohtas, and Kaimur district are shown water level rise in the range of more than 4 m. The fall is recorded as disseminated patches at many locations (small patches in Gaya, Purnia, Araria, Kishanganj E Champaran, and Samastipur district) in the State. (**Fig 9, Table 10**).

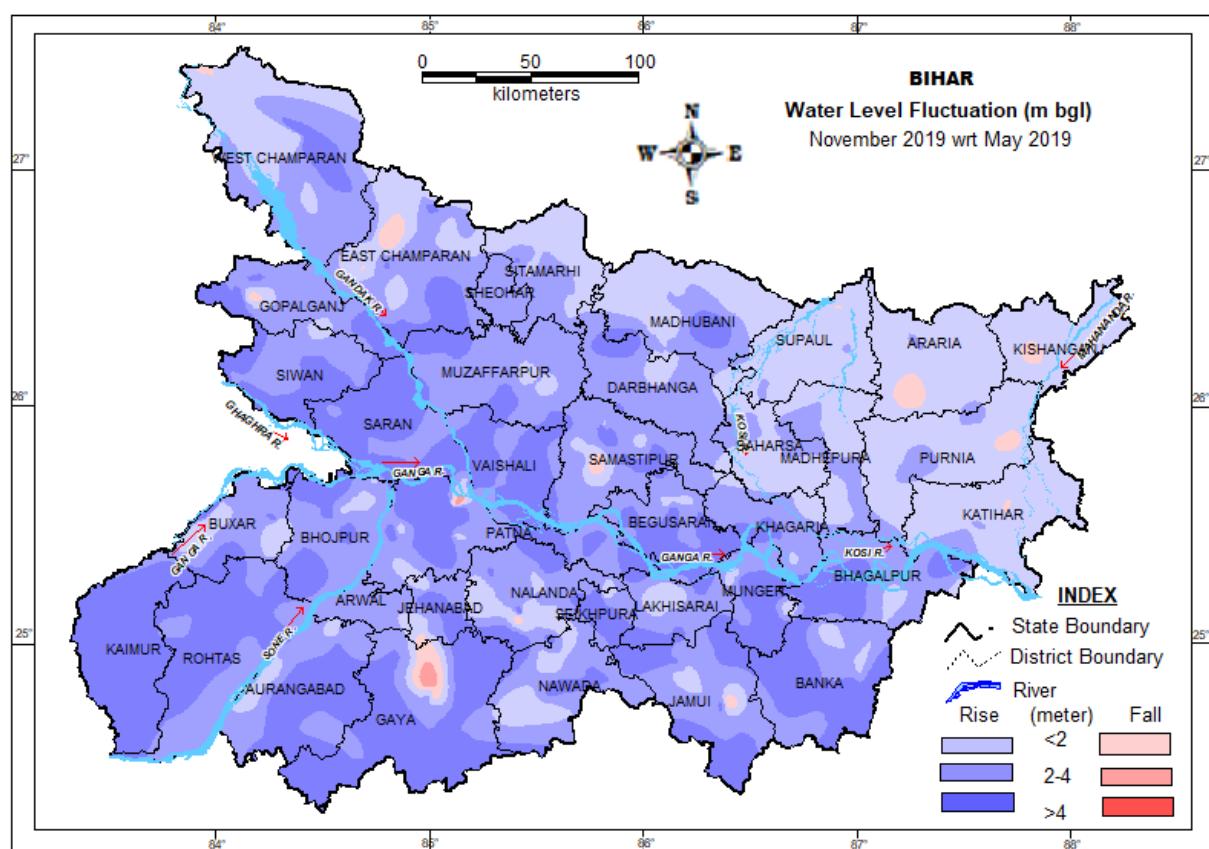

Fig. 9: Fluctuation in ground water level between May 2019 and Nov. 2019.

Table – 10 District wise categorization of fluctuation and their frequency of water levels of HNS of Nov. 2019 w.r.t. May 2019

District	No. of HNS	Range of fluctuation (m)				No. of Wells / Percentage showing fluctuation												Total

3.2.3 May 2019 to January 2020

Water level fluctuation between May 2019 and January 2020 has been analysed for 607 HNS which indicates rise in water level in about 91 % (551 wells) of the HNS. The rise in water level in the range of 0 – 2 m in 41 % of the HNS, 2 – 4 m in 33% of the HNS and >4 m only in 15% HNS. About 40% area has shown rise in water level up to 2 m covers major part of Araria, Purnia, Katihar, Kishanganj, Aurangabad, Arwal, Nalanda, and Patna districts and some other parts of Bihar State. The range of 2 to 4 m rise has been observed in major parts of Rohtas , Saran, Siwan, Muzaffarpur, Vaishali, Darbhanga, BEgusarai and Banka district, and many localised areas constitutes about 35% area of the State. 20% area of the state including major parts of Kaimur and Nawada districts and parts of Aurangabad, Gaya, Nawada, Jamui, Banka, Lakhisarai, Bhagalpur, Patna, Muzaffarpur, districts shows water level rise more than 4 m.

The fall in water level has been observed in 56 wells (9%), 8 % well shows fall less than 2 m and only 6 wells located in Gaya, Jamui, Madhepura, and E Champaran district shows fall in water level 2-4 m. The range of 0-2 m fall is observed as patcheses in Araria, Supaul, Purnia, katihar and Kishanganj districts and other areas as small patches covering 4% of the area of the state. Only 3 well has shown fall of water level >4 m (**Fig. 10, Table 11**).

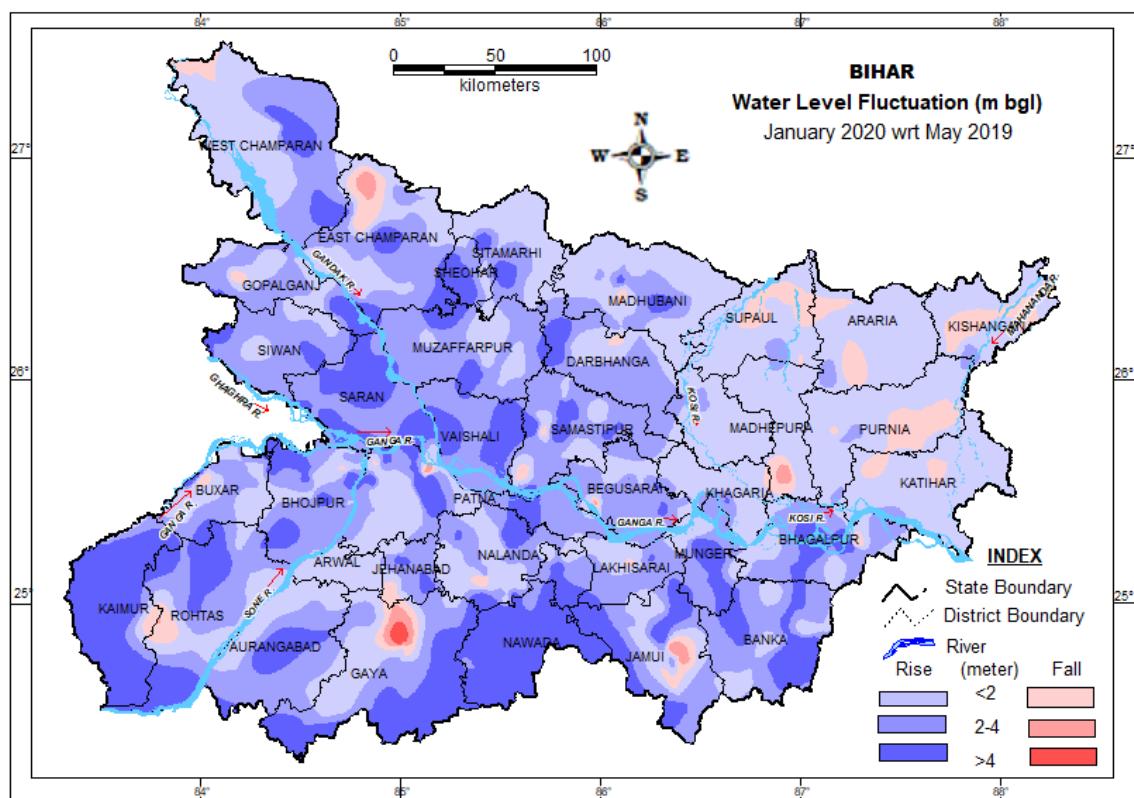

Fig. 10: Fluctuation in ground water level between May 2019 and Jan. 2020.

3.3.0 ANNUAL FLUCTUATION

3.3.1 May 2018 to May 2019

Fluctuation of ground water level between May 2018 and May 2019 of 584 HNS has been analysed which indicates rise in water level in 227 wells (39%) of the HNS and fall in water level in 357 No (61%) of HNS. Major part of the State has shown fall in water level. Fall to the tune of 0 – 2 m has covered maximum area (61%), which includes major parts of Darbhanga, E & W Champaran, Madhubani, Saharsa, Supaul, Madhepura, Samastipur Saran, Vaishali and Siwan districts in NBP and Nalanda, Bhojpur, Rotas, Buxar, Kamur, Nawada and Patna districts in SBP and many other small parts of the state. Parts of Sheohar, Sitamarhi, Gopalganj, Saran, Samastipur, Darbhanga, Patna, Munger, Jamui and Sheikhpora district and many other small parts of the state has shown water level fall between 2-4m. Very small part of Gopalganj, Saran, Sheohar, sitamarhi, Samastipur, and Jamui has shown water level fall >4m.

Area where rise of water level is within 2 m spread over major part of Purnia, Araria, Kishanganj, Katihar, Bhagalpur, and Banka district and as patches at many places in the state constituting 27% area of the state. Water level rise in the range of 2-4 m observed in very small parts of Kishanganj, Banka, Jamui, Aurangabad and E Champaran district and many other small patch like area in the state. Warer level rise >4m has been observed in only 11 NHS wells in Aurangabad, Bhojpur, Gopalganj, Jamui, Jehanabad, Khagaria, Gaya and Patna district. (**Fig. 11, Table 12**).

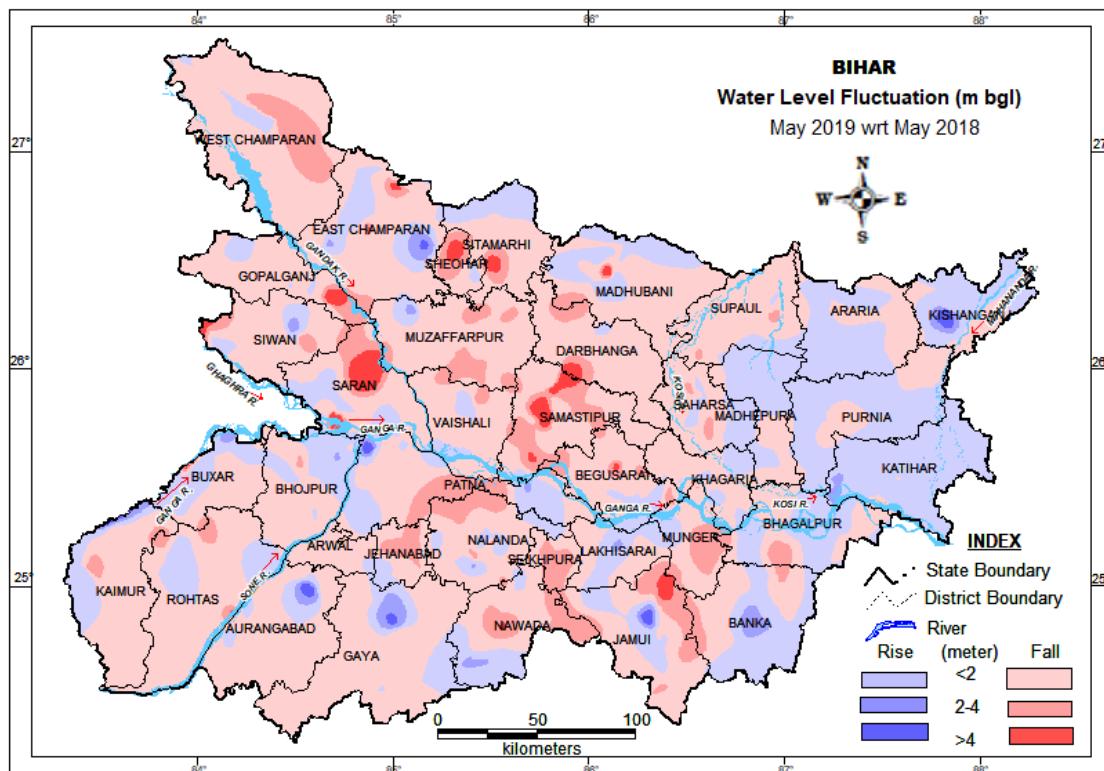

Fig. 11: Fluctuation in ground water level between May 2018 and May 2019.

3.3.2 August 2018 to August 2019

Water level fluctuation between August 2018 and August 2019 has been analysed for 587 HNS, which indicates that the rise of water level is in about 37% of the HNS and fall in about 63% of the HNS. Fall of water level within 2 m has been observed in major part of the state which covers major part of SBP and NBP constitute 54% of the total area. Fall of water level within the tune of 2-4 m observed in part of Siwan, Samastipur, Muzaffarpur, Jamui, Nalanda, Nawada, Sheikhpura, Munger and Jamui district and many other small patches in the state. Small part of Samastipur, Nalanda, Sheikhpura, Lakhisarai, Jamui, Banka and Nalanda district has shown water level fall >4m.

Part of NBP and SBP has shown rise in the tune of 0-2 m covered total 32% area.

The rise of water level in the range of 2 to 4 m has been observed in very small part of the state covering very small parts of Gaya, Jehanabad, Kaimur, Siwan, and E Champaran districts. Only 9 wells has shown rise in water level more than 4 m. (**Fig.12, Table 13**).

3.3.3 November 2018 to November 2019

Water level fluctuation between November 2018 and November 2019 has been analysed for 592 HNS, which indicates that there is a rise of water level in about 81% of the HNS and fall in only 19% of the HNS. The rise of water level of 0-2 m range shows in 59% NHS wells covering 61% area covers maximum parts SBP and NBP. The segment of 2 to 4m rise shown in small parts of E Champaran, Saran, Siwan, Vaishali, Darbhanga, Patna, Gaya, Banka, Jamui and Bhagalpur district and other small patch areas of the state. >4 m rise has been observed only in E & W Champaran Muzaffarpur, Vaishali, Patna, Saran, Aurangabad, Munger and Kaimur district.

Total 22% area of the State shows fall in water level. Parts of Araria, Sheohar, Supaul, E Champaran, Buxar, Bhojpur, Rohtas, Jamui, Nawada, Lakhisarai, and some other small parts of state is covered by the range of 0-2m rise in water level. Only 17 NHS wells covering very small parts of Kaimur, Rohtas, Nalanda, and Munger district has shown the fall of water level 2- 4 m. The range of > 4 m rise has been observed in only 4 wells located in Sitamarhi, Samastipur, Patna and Araria district. (**Fig.13, Table 14**).

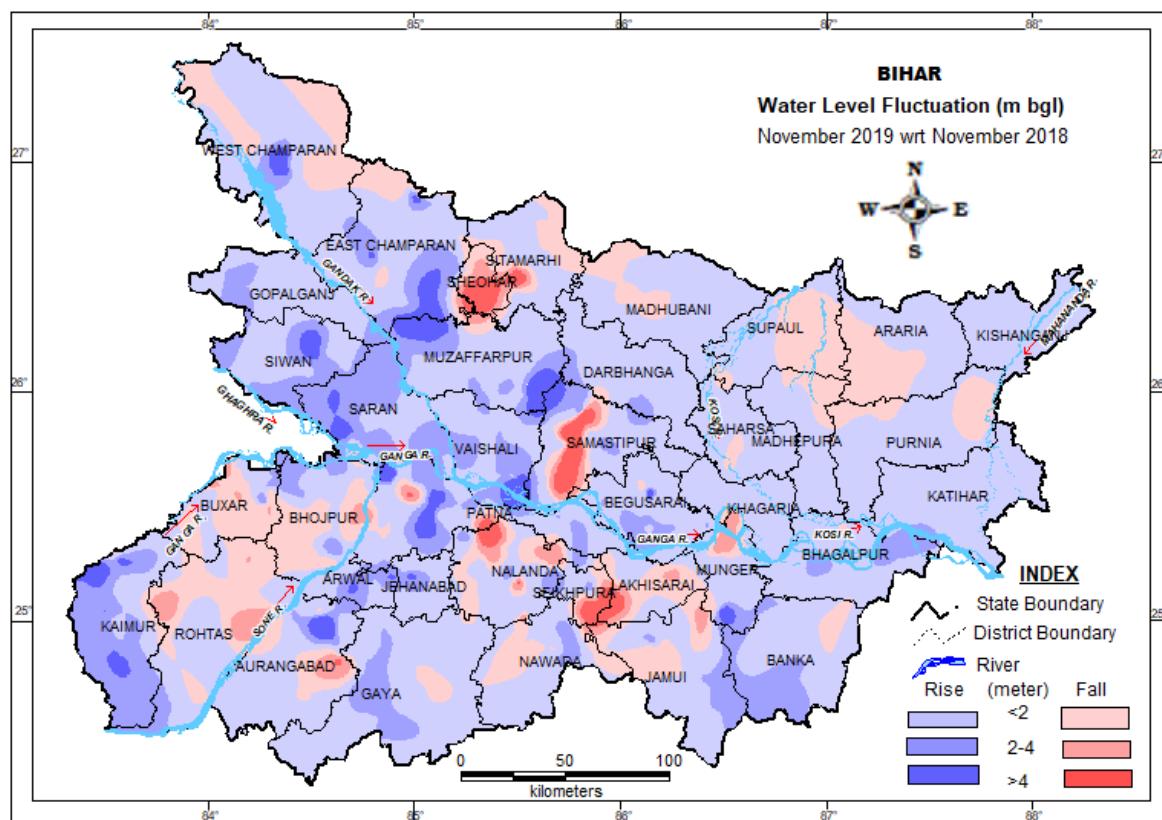

Fig. 13: Fluctuation in ground water level between Nov 2018 and Nov. 2019.

3.3.4 January 2019 to January 2020

Water level fluctuation between January 2019 and January 2020 has been analysed for 604 HNS. The rise of water level ranged from 0.02 to 6.36 m has been observed in 488 wells (81%) whereas the fall in water level between 0.01 to 7.00 observed in 116 (19%) wells.

The rise to the tune of 0 to 2 m has been shown in 62% area of the State spread in almost entire State. The segment of 2 to 4 m rise has been observed in localised areas falls in Saran, Siwan, Vaishali, Samastipur, Banka, Jamui, Nawada, Kaimur and Rohtas district and many other small parts of the State. Only 19 wells in has shown water level rise more than 4m.

The fall in the range of 0 – 2 m and 2 – 4 m has been observed in 13% and 3% of total area of the state respectively. The fall ranged from 0 to 2 m is observed in part of E & W Champaran, Sheohar, Bhojpur, Rohtas, Aurangabad and Gaya district and some other small part as patches at many locations. The segment of 2 to 4 m fall has been calculated for only 20 wells covers the area as patches in part of Kaimur, Rohtas, Patna, E Champaran and Jamui district. Only 10 well located in E Champaran, Kaimur, Rohtas, Patna and Jmaui district have shown fall of water level more than 4 m. (**Fig. 14, Table 15**).

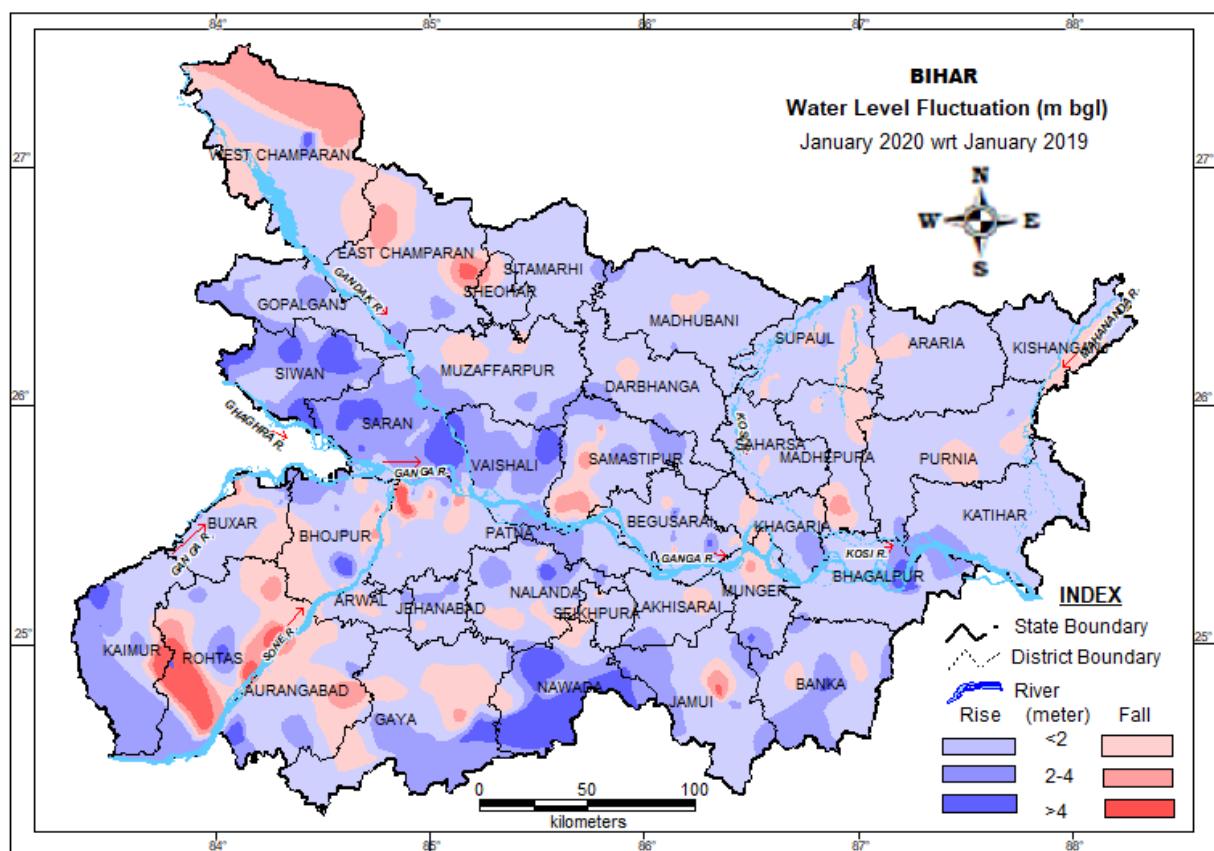

Fig. 14: Fluctuation in ground water level between Jan. 2020 and Jan. 2019.

3.4 DECADAL FLUCTUATION

3.4.1 Decadal Mean of May to May 2019

Fluctuation in water level of May 2019 with respect to decadal mean of May has been analysed for 634 HNS, which indicates fall in 68% and rise in the remaining 32% of the analysed HNS. The fall in the tune of 0 – 2 m is observed in the 57% of the HNS analysed, spatially covers the 77% area of the State and covers almost entire part of SBP and maximum part of NBP. In only 47 HNS has shown fall in the tune of 2-4 m covering very small patches of Saran, Siwan, Gopalganj, Nawada, Rohts and Bhagalpur district. Only 24 wells located in Bhagalpur, Bhojpur, Buxar, Gopalganj, Jamui, Kaimur, etc district has recorded water level fall more than 4m.

20% area of the State has shown rise in water level less than 2 m whereas the segment of 2 – 4 m observed in only 3% of total NHS wells. The rise of water level more than 4m has been recorded in only 4 wells located in Aurangabad, Gaya, Lakhisarai and Begusarai district. (**Fig. 15, Table 16**).

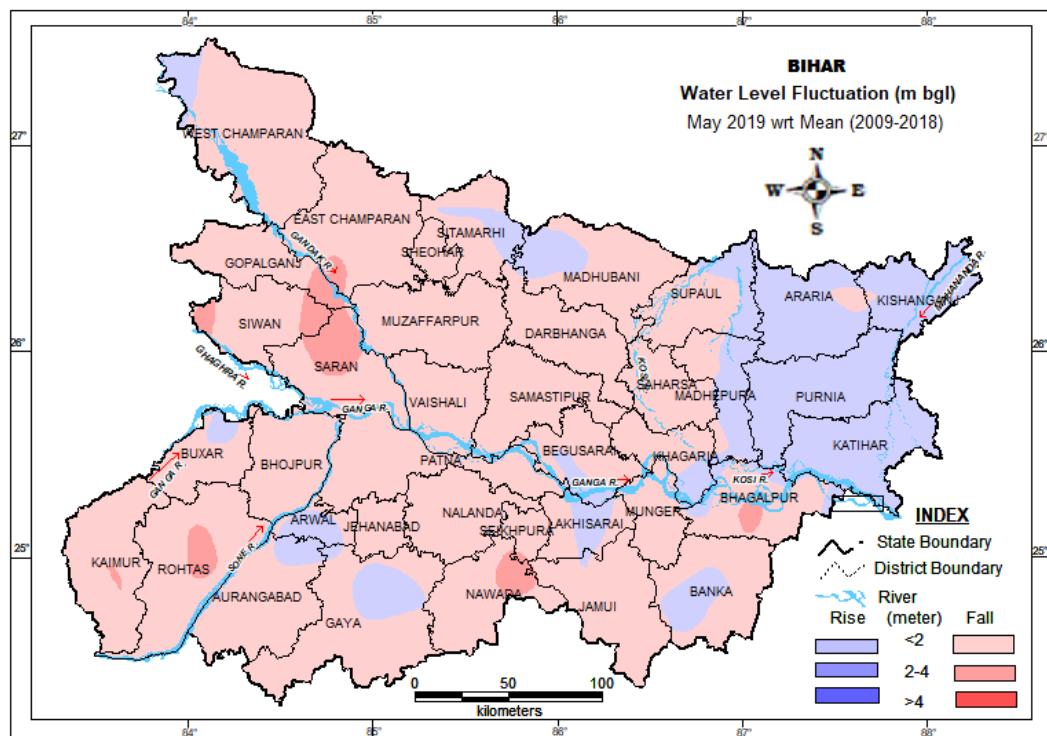

Fig. 15 Fluctuation in water level between May (mean) and May 2019.

3.4.2 Decadal Mean of August to August 2019

Fluctuation in water level of August 2019 with respect to decadal mean of August has been analysed for 615 HNS, which shows fall in water level in the 68% of HNS and rise in the remaining 32% of HNS. The fall in the range of 0 – 2 m has been observed in 49% of the HNS, spatially covers the major area (57%) of the state. The range of 2 to 4 m fall has been recorded in Siwan, Muzaffarpur, Patna, Nalanda, Jehanabad, Aurangabad, Nawada, Jamui, Gaya and Kaimur district and as small patches at some other locations. Only 13 wells shown fall more than 4m.

About 29 % area of the State has shown rise of water level in the range of 0 to 2m spread mainly in major parts of Sitamarhi, Madhubani, Araria, E & W Champaran, Araria, Purnia, Katihar, Kishanganj, Gaya, Jehanabad, Arwal, Aurangabad, Rohtas and Kaimur district and many other parts of state. The range of 2 – 4 m has been observed only in 26 wells. The rise of water level more than 4m has been recorded only in 3 well located in Buxar and Jamui. (**Fig. 16**,

3.4.3 Decadal Mean of November to November 2019

Fluctuation in water level of November 2019 with respect to decadal mean of November has been analysed for 629 HNS, which shows Rise in water level ranged from 0.02 (Darbhanga district) to 6.58 (Patna district) m in 78% of the HNS and fall in the remaining 22 % of HNS. Maximum part (74% of total area) of the district shows water level rise in the range of 0 to 2m. Water level rise in the range of 2 – 4 m has been observed in 9% NHS which covers only 5% area of the state including very small part of E Champaran, Sitamarhi, Patna, Nalanda, Nawada, Jamui and Aurangabad district and some other patches. Rise >4m has been obsereveed in only 2 NHS wells located in Patna and Aurangabad district.

The fall in the range of 0-2 and 2-4 m has been shown by 19% and 2% of HNS respectively. The fall of water level ranged from 0 to 2 m covers 19% area of the State covers the major and adjoining part of Rohtas, Nalanda, Jamui and Nawada districts and parts of Darbhanga, Supaul, Araria, Muzaffarpur, Begusarai, Lakhisarai, Sheikhpura and Bhojpur district and as patches at many locations. Fall within 2 to 4 m observed in very small parts of Sitamarhi, Patna. Aurangabad, and Nalanda distric and many other small patches. Only 6 well has shown water level fall >4m. (**Fig. 17, Table 18.**)

3.4.4 Decadal Mean of January to January 2020

Fluctuation in water level of January 2020 with respect to decadal mean of January has been analysed for 657 HNS. In 71% of the HNS, rise in water level is recorded and remaining 29% HNS fall in water level has been observed. The rise in the range of 0 – 2 m has been spread in 65% area covered almost entire part of the state except major part of E & W Champaran, Muzaffarpur, Darbhanga, Patna, Nalanda, Nawada, Gaya, Aurangabad, Rohtas and Banka district. The segment of 2-4m rise has been observed as patches in Saran, Vaishali, Nalanda, Patna, Rohtas and Kaimur district and some other places as small patches. Only 1% wells have shown rise of water level >4m.

About 26% area of the State has shown fall in the tune of 0 to 2 m including major part of E & W Champaran, Muzaffarpur, Darbhanga, Patna, Nalanda, Nawada, Gaya, Aurangabad, Rohtas and Banka district and some localised part of the state. The segment of 2 to 4 m fall has been observed as very small patches in Samastipur, E & W Champaran, Jamui, Nawada, Patna, Gaya, Aurangabad, Rohtas, and Kaimur district. Only 10 wells has shown fall of water level more than 4 m covering very small parts of Aurangabad, Rohtas, Kaimur, Patna, Bhojpur and Gaya district. (**Fig. 18, Table 19**).

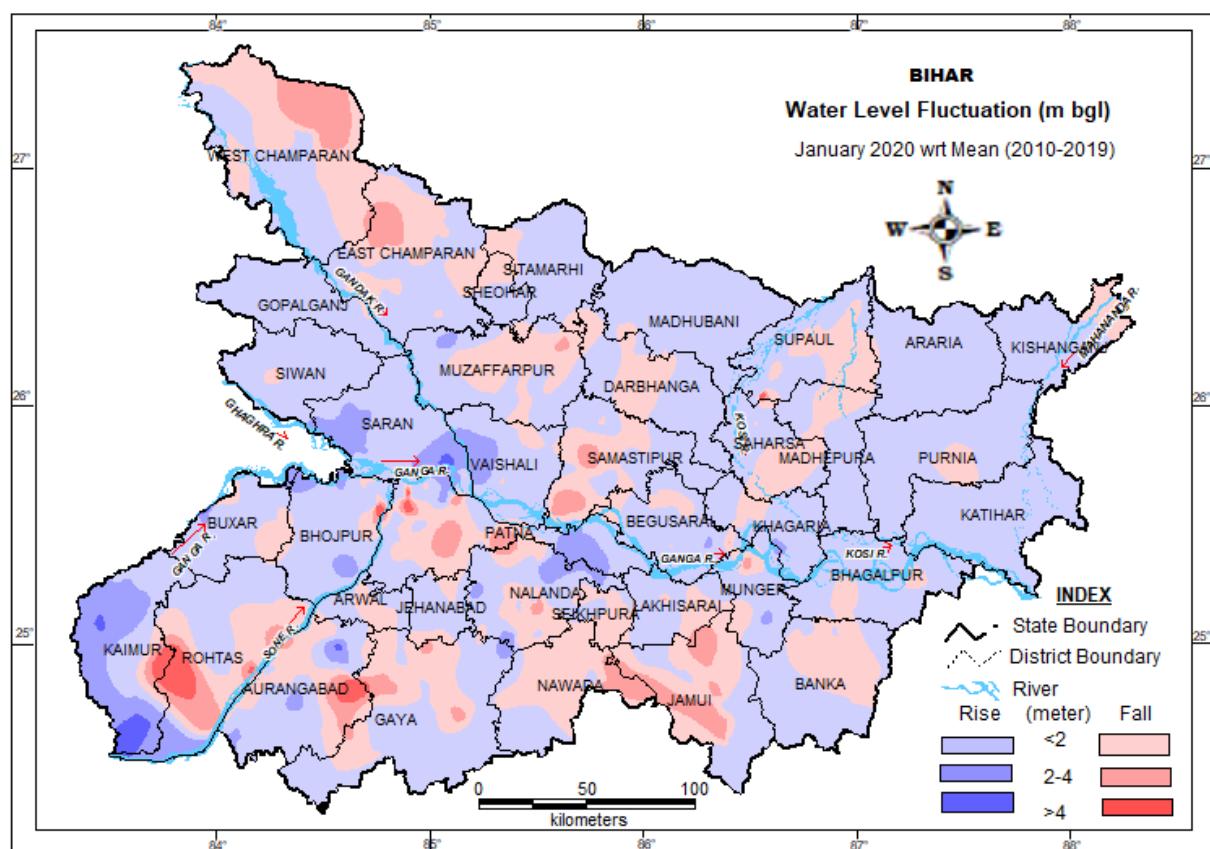

Fig. 18 Fluctuation in water level between Jan. (mean) and Jan. 2020

4. HYDROCHEMISTRY

In order to assess the chemical quality of ground water of phreatic aquifers of Bihar 671 ground water samples have been collected during May 2018 and analysed for 15 major parameters viz. EC, pH, HCO₃, CO₃, Cl, F, NO₃, PO₄, SO₄, TH, Ca, Mg, K, Na, SiO₂. The results of the completed chemical analysis of the ground water samples are given in Annexure-II. A perusal of the Annexure-II indicates that the water is by and large suitable for domestic and drinking purposes. The pH of ground water mostly lies between 7 and 8. Majority of the ground water samples are mildly alkaline in nature.

The minimum, maximum and average value of parameter is given in table below:

Table – 20 Minimum, Maximum and Average value of Chemical Parameter

	pH	EC	TH	Ca	Mg	Na	K	CO ₃	HCO ₃	Cl	SO ₄	NO ₃	F	TDS
Minimum	6.76	100	15	4	1	0	0	0	43	0	0	0	0	60

Average	7.9	734.7	236.2	62.1	28.5	51.9	8.4	0.2	285.4	53.3	34.5	28.5	0.4	466.2

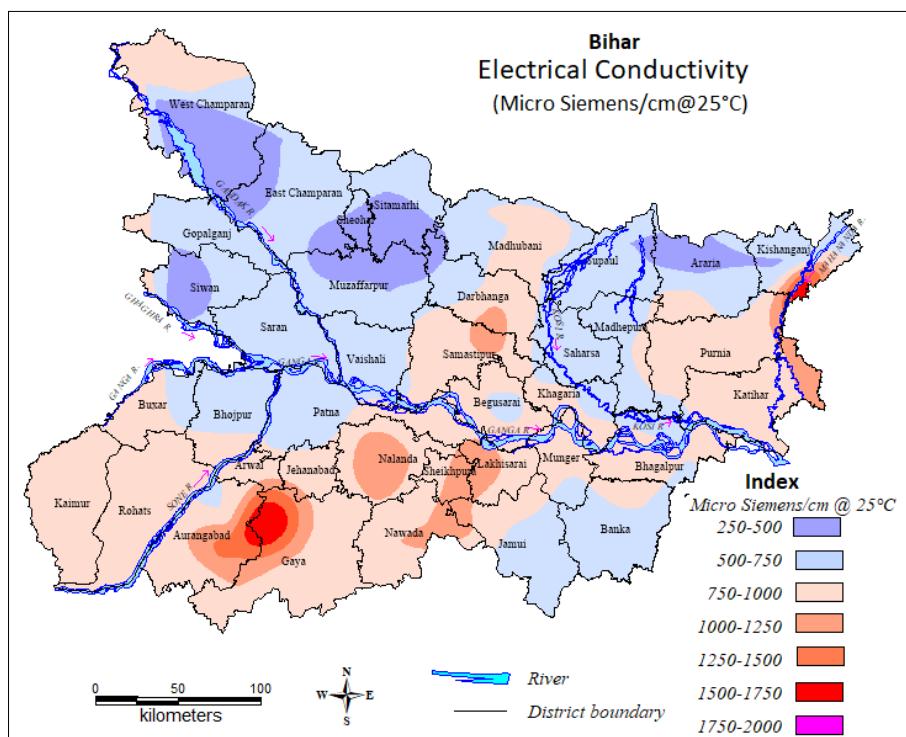

Fig. 19 Map of Electrical Conductivity (In Micro Siemens/cm@25°C)

Major part of the district has shown electrical conductivity (EC) value within 1000 μs . In neighbouring area of Kosi and Ganga River, northern part of Bhojpur and Buxar district, western part of Patna district and southern part of Jamui and Banka district EC value is below 750. There are some localised areas where EC value is more than 1250 may be due to some anthropogenic activities.

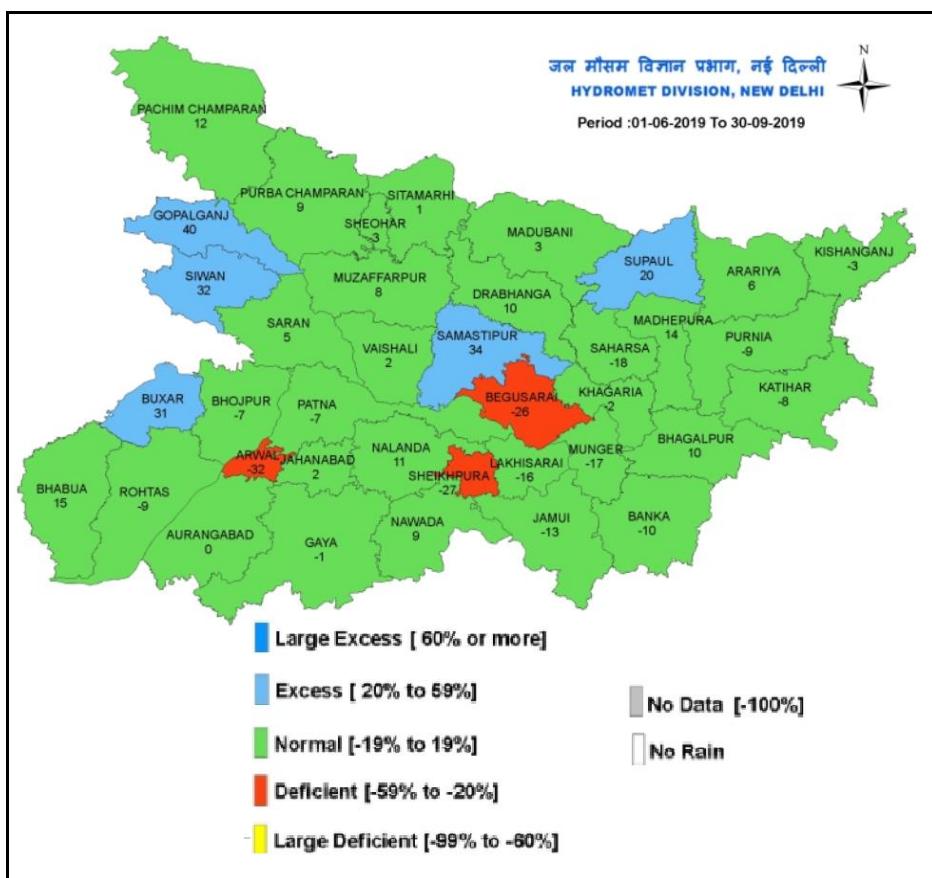

5. RAINFALL DATA ANALYSIS

The state with 38 districts had 1050.4 mm rainfall, 3% above normal. Five districts were in Excess rain category: Gopalganj (1367.5 mm, 40% above normal, highest surplus %, situated just south of Pschim Champaran), Supaul (1313.2 mm, 20%), Samastipur (1304.6 mm, 34%), Siwan (1273.3 mm, 32%), Buxar (1084.2 mm, 31%). Three districts had Deficit rainfall: Arwal (511.6 mm, 32% below normal, the lowest rainfall of the state), Sheikhpura (617.8 mm, 27% below normal) and Begusaria (769.1 mm, 26% below normal). Eighteen districts had over 1000 mm rainfall, with Kishanganj (1738.2 mm, 3% below normal) occupying the NE corner of the state recording the highest rainfall, followed by Paschim Champaran (1434.1 mm, 12% above normal, situated at NW corder of the state) and Arariya (1414.5 mm, 6% above normal, just west of Gopalganj).

6. TREND ANALYSIS DURING PRE AND POST MONSOON

Trend of the ground water level for the last ten year (2009-2018) have been analyzed. District wise percentage of well showing rise, fall and no significant trend during Pre- Monsoon and Post Monsoon season has been prepared and given in the Annexure – III. From long term water level trend data it has been observed that more than 50% NHS wells have shown falling trend in 26 districts in premonsoon period and 13 districts in Postmonsoon period.
