## EXECUTIVE SUMMARY

*Central Ground Water Board, an apex Organization under Ministry of Water Resources, Government of India, is carrying out the monitoring of ground water levels all over the country for generating a sound database so that the changes in ground water regime could be scientifically studied, analysed and strategies for its optimal utilization can be planned.*

*The behaviour of ground water table during the ground water year 2021-22 in the state of Tamil Nadu and Puducherry and Karaikal regions of the Union Territory of Puducherry has been studied by monitoring a set of dug wells and purpose-built piezometers during the months of August 2021, November 2021 and January 2022. As of January 2022, Central Ground Water Board, South Eastern Coastal Region, monitors 736 dug wells and 424 tube wells/piezometers to study the ground water scenario of the state of Tamil Nadu and Puducherry and Karaikal regions of the Union Territory of Puducherry.*

*The present compilation relates to the year 2021-22. It provides information pertaining to water levels and also chemical quality of the phreatic aquifer. Thematic maps depicting the ground water scenario along with geochemical quality are furnished and discussed in this report. In addition, the fluctuations in water level and piezometric surface between different time frames have been analysed and presented. Various thematic maps presented reflect the effect of rainfall received during the period of study and the long-term behaviour of water level according to ground water recharge and draft conditions obtained in various agro-climatic zones. The data on seasonal rainfall during the year are furnished to correlate the effect of rainfall on water levels.*

*In general, the water levels are deep in the month of May and a rising trend of water levels during January (Post-monsoon period) was observed. Water level fluctuation takes place during August, November and January depending on the monsoon rainfall and level of groundwater development.*

*Depth to water level during premonsoon major part of the State (71% of the wells), particularly in the central and Eastern parts are < 10m bgl. Where as the central and north western parts have recorded shows water level of > 10 m bgl. Water levels < 2 m are observed in 5% of wells. Depth to water level in the range of 10 to 20 m bgl has been observed in 24 % of wells analysed and found in More than 50% of wells of Dharmapuri and Perambalur districts.*

*During postmonsoon period, Over all 85% of the wells monitored in the state and UT are in < 10 m bgl range and spreaded over entire Tamil Nadu. 2 % of the wells have recorded water level of >20 m and are scattered particularly in Coimbatore and Erode and Madurai districts. Depth to water level in the range of <2 m bgl has been recorded in 19 % of wells analysed and found scattered in all the districts. More than 20 % of wells of Dharmapuri, Erode, Namakkal, Salem, Sivaganga, Trichy and Vellore districts have recorded water level in 10 – 20 m bgl range.*

*Results of chemical analysis of water samples collected during May 2021 are also discussed for understanding the spatial variation of EC, Chloride, Fluoride and Nitrate concentration in the phreatic aquifer system of the state of Tamil Nadu and Puducherry and Karaikal regions of the Union Territory of Puducherry.*

# **GROUNDWATER YEARBOOK OF THE STATE OF TAMIL NADU AND PUDUCHERRY AND KARAikal REGIONS OF THE UNION TERRITORY OF PUDUCHERRY**

**(2021-22)**

## **I. INTRODUCTION**

The state of Tamil Nadu has a geographical area of 1,30,058 sq. km. and is situated between N. Latitudes 08°00" and 13°30' and E. Longitudes 76°15' and 80°18'. The state is bounded by the Bay of Bengal in the east, the Indian Ocean in the south, the state of Kerala in the west and the states of Karnataka and Andhra Pradesh in the north. For administrative purposes, the state is divided into 38 districts and 1166 developmental Firkas. A major part of the Union Territory of Puducherry comprising Puducherry and Karaikal regions occurs as small enclaves in Tamil Nadu.

The Central Ground Water Board, South Eastern Coastal Region is monitoring the water levels in ground water monitoring wells in the state of Tamil Nadu and Puducherry and Karaikal regions of the Union Territory of Puducherry four times a year, viz. May (between 20<sup>th</sup> and 31<sup>st</sup>), August (between 20<sup>th</sup> and 31<sup>st</sup>), November (between 1<sup>st</sup> and 10<sup>th</sup>) and January (between 1<sup>st</sup> and 10<sup>th</sup>). Water samples from the Ground Water Monitoring Wells are collected once in a year i.e. during May. **Table-1** gives the number of Ground Water Monitoring Wells tapping the phreatic aquifers and the piezometers/tube wells/bore wells tapping the deeper semi-confined to confined aquifer during the monitoring months. The behaviour of water levels are analysed with reference to the rainfall pattern. The data are utilised for the assessment of ground water resources, evaluation of the present status of ground water development and also for planning future development. For analytical purposes, only the data of the Ground Water Monitoring Wells tapping phreatic aquifers are considered. The data thus collected are analysed and interpreted and the Ground Water Yearbook is issued annually with interpreted data and thematic maps depicting the ground water scenario.

The results of the chemical analysis of water samples collected from Ground Water Monitoring Wells during May 2021 are also discussed.

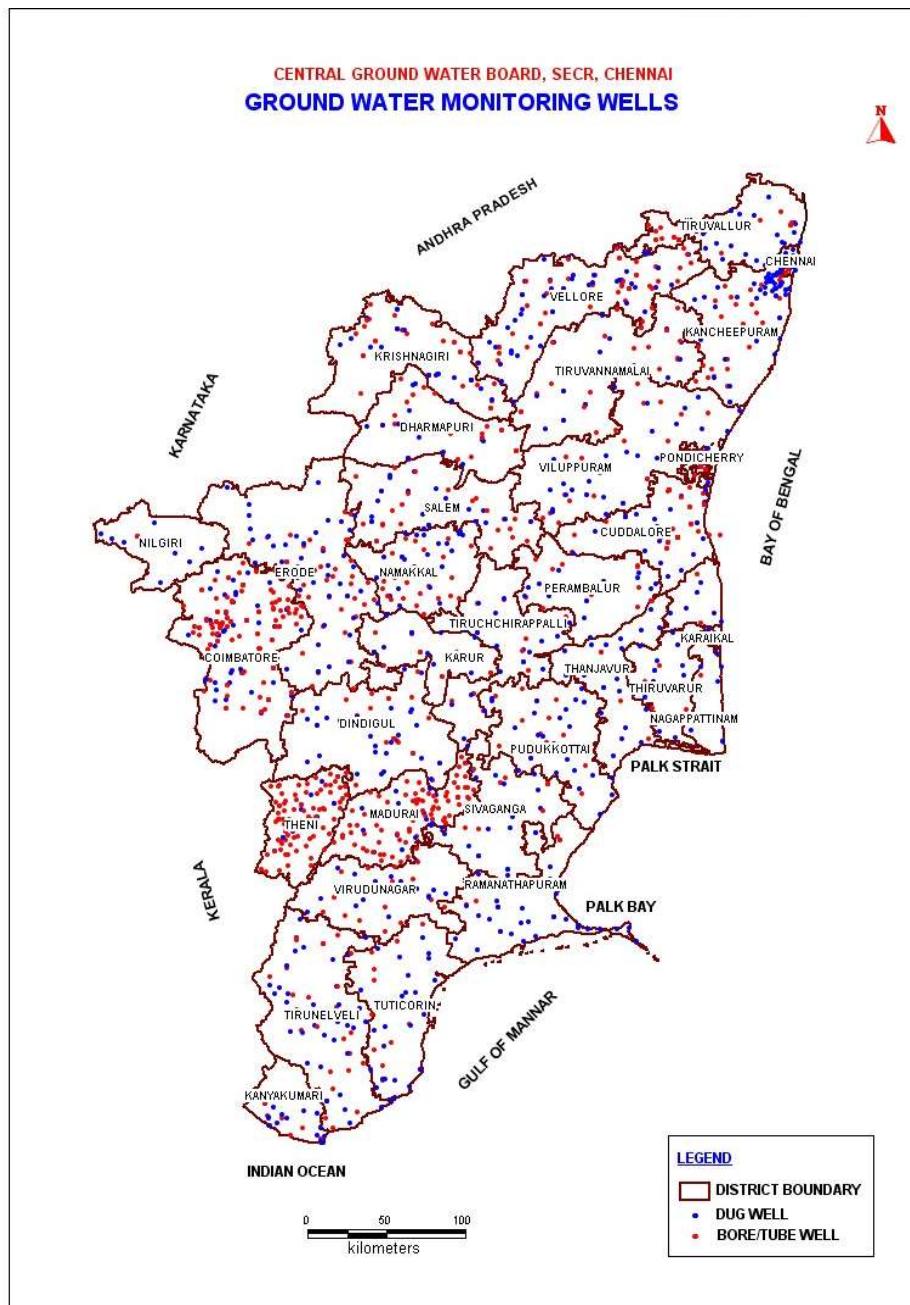

The status of district-wise break-up of Ground Water Monitoring Wells is given in **Table-2** and their locations are shown in **Plate I**. The district-wise depth to water level data of the dugwells and depth to piezometric surface of piezometres for the measurements during May 21 (Only 569 wells), August 2021, November 2021 and January 2022 are given as **Annexures I& II**.

**TABLE-1: Number of Ground Water Monitoring Wells in**

PERIOD OF MEASUREMENT	No. OF WELLS MONITORED		
	DUG WELLS	PIEZOMETERS / TUBEWELLS	TOTAL
May 2021	365	224	569
August 2021	758	432	1190
November 2021	741	384	1125
January 2022	736	424	1160

Background information on physiography and drainage, rainfall, hydrogeological conditions, ground water resources development of the

state are also furnished in brief for better understanding of the behaviour of water table.

## **PHYSIOGRAPHY**

The state of Tamil Nadu is divided into four physiographic units viz. (i) Coastal Plains, (ii) Eastern Ghats, (iii) Central Plateau and (iv) Western Ghats. The coastal plains stretch over a distance of about 998 km. from Pulicat Lake to Cape Comorin, ranging in elevation between 2 and 30 m above mean sea level. The coastal plains are further sub-divided into (a) the Coromandel Coast comprising parts of the districts of Tiruvallur, Kancheepuram and Cuddalore, (b) the alluvial plain of Cauvery delta extending over Nagappattinam, Thanjavur Thiruvarur districts and (c) the dry southern plains comprising parts of Pudukkottai, Ramanathapuram, Tuticorin, Tirunelveli and Kanyakumari districts.

The chain of flat-topped hills of Javadi, the Shevroy, the Kalrayan and the Pachamalai hills, which are joining Cardamom hills in the south, form the Eastern Ghats. These hills rise steeply above plateau level to 1160 m above mean sea level in the Javadi hills and to 1645 m above mean sea level in the Shevroy hills.

Between the Eastern and Western Ghats lies the plateau area known as the "Central Plateau" comprising the districts of Erode and Coimbatore with elevations between 150 and 610 m above mean sea level thereby giving rise to an undulating topography. West of the region lies the broad Palghat gap between the Nilgiri and Anaimalai Hills. Between Cauvery River and the Palghat gap lies an extensive low plateau rising gradually from 120 to 180 m above mean sea level, along the tributaries of the Cauvery River, to 365 to 455 m above mean sea level in the west.

The plateau is fringed on the west by a group of high hills known as the Western Ghats, comprising the western part of the Nilgiri, Madurai and Kanyakumari districts. On the other side of the Palghat gap, the high mountains of the Peninsula dominate. These are the Nilgiri in the north, Anaimalai Hills, Palani and Cardamom hills in the south, with a summit level of 1830 to 2440 m above mean sea level rising sharply from the plateau.

## **DRAINAGE**

The state of Tamil Nadu is drained by several major and minor rivers. All the major rivers originate in the Western Ghats and flow eastwards. The Palar, Ponnaiyar, Cheyyar, Kortallaiyar and Araniyar are the important rivers in the north, which are ephemeral and cutting across the centre of the state is the river Cauvery. The Cauvery delta consists of a gently sloping alluvial plain covering an area of 11,600 sq. km. and amongst its

tributaries the Bhavani and Amaravathi form the most important sources of canal irrigation in the state. Bhavani, Noyil and Amaravathi rivers originate in the hill ranges of Nilgiri and Anaimalais and flow through matured valleys across the plateau.

The important rivers flowing in the southern part of Tamil Nadu are (i) Vellar (ii) Vaigai (iii) Vaippar and (iv) Tambaraparani. Of these, Tambaraparani River is only perennial, forming a good source of canal irrigation. There are several other minor and less important rivers in the state. Besides these, there are a number of smaller rivers such as the Aliyar, Sholaiyar, Parambikulam Ar, etc. flowing westwards. Except the perennial rivers, all the rivers remain dry for a good number of months in a year and are not suitable for development of power and major irrigation works. The Pulicat Lake and Kaliveli tank are the important lagoons.

The rivers of the state flow in broad and shallow valleys graded almost to their heads with only slight interruptions of profiles when they pass through the Eastern Ghats. The Western Ghats form the main watershed of the state having numerous waterfalls and Courtallam Falls (91.5 m) is one of the important waterfalls of the state.

## **DISTRIBUTION OF RAINFALL DURING GROUND WATER YEAR 2021-2022**

Rainfall data corresponding to the measurement of water level has been downloaded from the website of India Meteorological Department. As per IMD's classification of monsoon performance over a meteorological subdivision, if the amount of rainfall received over a region (expressed as PDN) is between -19% and +19%, the monsoon performance is termed as *normal*. If the PDN is between -20% and -59%, the region comes under *deficient* category, if PDN is less than or equal to -60%, the region falls under *scanty* category, PDN of +20% to +59% indicates *excess* rainfall category and if the PDN is greater than or equal to +60%, it is termed as *large excess*.

### **South West Monsoon (01st June to 30th Sep)**

During SWM 2021 Tamilnadu and Pondicherry and Karaikal received *normal* rainfall. The cumulative seasonal (01st June to 30th Sep) rainfall figures for the state and UT of Puducherry is given below (**Table-1**):

**Table-1: Seasonal sub divisional rainfall distribution the SWM season, 2020 (01<sup>st</sup> June-30 Sep 2020)**

SUB-DIVISION	Actual rainfall (mm)	Normal rainfall (mm)	Percentage departure from normal (%)
TAMILNADU, PDC and KKL (TN)	393.4	336.1	+17%

## Monthly sub divisional rainfall

The monthly sub divisional rainfall scenario is presented in Table-2. During the SWM 2021, in July Tamilnadu and Puducherry continued to be deficient.

**Table-2: Monthly sub divisional rainfall performance during SWM 2021**

Sub-division	June			July			Aug			Sep		
	ACL (mm)	NOR (mm)	PDN (%)	ACL (mm)	NOR (mm)	PDN (%)	ACL (mm)	NOR (mm)	PD N (%)	ACL (mm)	NOR (mm)	PDN (%)
TN	62.3	51.7	21	124.6	73.3	70	88.9	92.8	-4	117.6	118.3	-1

Largely Deficient	Deficient	Normal	Excess	Large Excess
≤ -60%	-20% to -59%	-19% to +19%	+20% to +59%	≥+60%

## District-wise seasonal rainfall distribution

Fig. presents the district rainfall distribution as percentage departures from normal over the Tamilnadu and UT of Puducherry during the period Jun-Sep 2021.

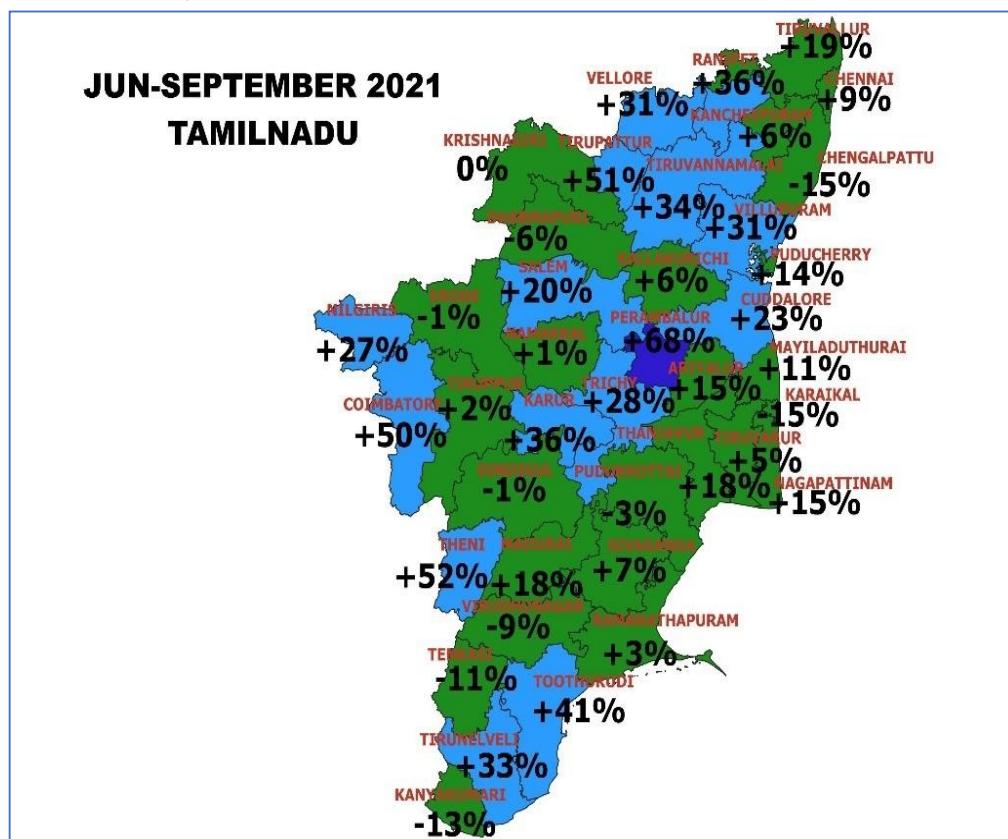

Fig.2 District wise rainfall distribution as percentage departures from normal over the Tamilnadu and UT of Puducherry

Tamil Nadu with 38 districts had 424.1 mm rain, 17% above average rainfall. Two districts (Theni 52% above normal) and Tiruppur (111% above normal) were in Excess category and three districts (Chengalpattu 15%, Kanyakumari 13%, and Tenkasi 11% below normal) was in Deficit category. In the seasonal scale TN reported 73 days of *heavy* rainfall occurrences with 27 days of *isolated very heavy* rainfall and 6 days of *isolated extremely heavy* rainfall during the season.

**Table-4: Subdivision-wise frequency of heavy rainfall days over the SP region during 1<sup>st</sup>June-30<sup>th</sup>Sep 2021**

Subdivision	No. of days of Heavy rainfall (Rainfall $\geq 7$ cm/day)		
	Extremely Heavy ( $\geq 21$ cm/day)	Very Heavy ( $\geq 12$ cm/day)	Heavy ( $\geq 7$ cm/day)
TAMIL NADU, PDC and KKL	2	20	73

**Table-5: District rainfall performance over various sub divisions of the SP region during June-September, 2021**

Met. Sub division	Total No. of districts	No. of districts under various categories of monsoon performance				
		Large Excess	Excess	Normal	Deficient	Large Deficient
TAMIL NADU, PDC and KKL	40	1	15	24	0	0

**Table-6: Terminologies for description of intensity of rainfall**

Sl No.	Terminology	Rainfall range inmm	Rainfall range incm	Percentile
1	<i>Very Light Rainfall</i>	Trace – 2.4		
2	<i>Light Rainfall</i>	2.5 – 15.5	Up to 1	Up to 65
3	<i>Moderate Rainfall</i>	15.6 – 64.4	02 – 06	65 – 95
4	<i>Heavy Rainfall</i>	64.5 – 115.5	07 – 11	95 – 99
5	<i>Very Heavy Rainfall</i>	115.6 – 204.4	12 – 20	99.0 – 99.9
6	<i>Extremely Heavy Rainfall</i>	Greater than or equal to 204.5 mm	21 cm or more	>99.9
7	<i>Exceptionally Heavy Rainfall</i>	When the amount is a value near about the highest recorded rainfall at or near the station for the month or season. However, this term will be used only when the actual rainfall amount exceeds 12 cm.		

### **North East Monsoon 2021**

The northeast monsoon (NEM), a small scale monsoon confined to parts of southern peninsular India comprising of the meteorological sub-divisions of Tamil Nadu, Puducherry & Karaikal (TN), Kerala & Mahe (KER), Coastal Andhra Pradesh & Yanam (CAP), Rayalaseema (RYS) and South Interior Karnataka (SIK) occurs. For the

subdivision of TN, the normal SWM seasonal rainfall realised is only about 36% (336.1 mm) of its annual rainfall (939.3 mm) as this subdivision comes under the rain-shadow region during the SWM. The northeast monsoon (NEM) season of October to December (OND) is the chief rainy season for this subdivision with 48%

State	No. of days				
	Widespread	Fairly widespread	Scattered	Isolated	Dry
Tamilnadu & Puducherry	14	27	25	16	10

(449.7 mm) of its annual rainfall realised during this season.DURING 2021, THE NORTHEAST MONSOON RAINFALL WAS NORMAL (-19% TO +19%) OVER IN TN, (59%).

**Table-7: Sub-divisional seasonal rainfall during October-December 2021**

Subdivision	01 <sup>st</sup> October – 31 <sup>st</sup> December 2021		
	Actual (mm)	Normal (mm)	PDN (%)
TAMIL NADU, PUDUCHERRY & KARALKAL	714.3	449.6	+59%

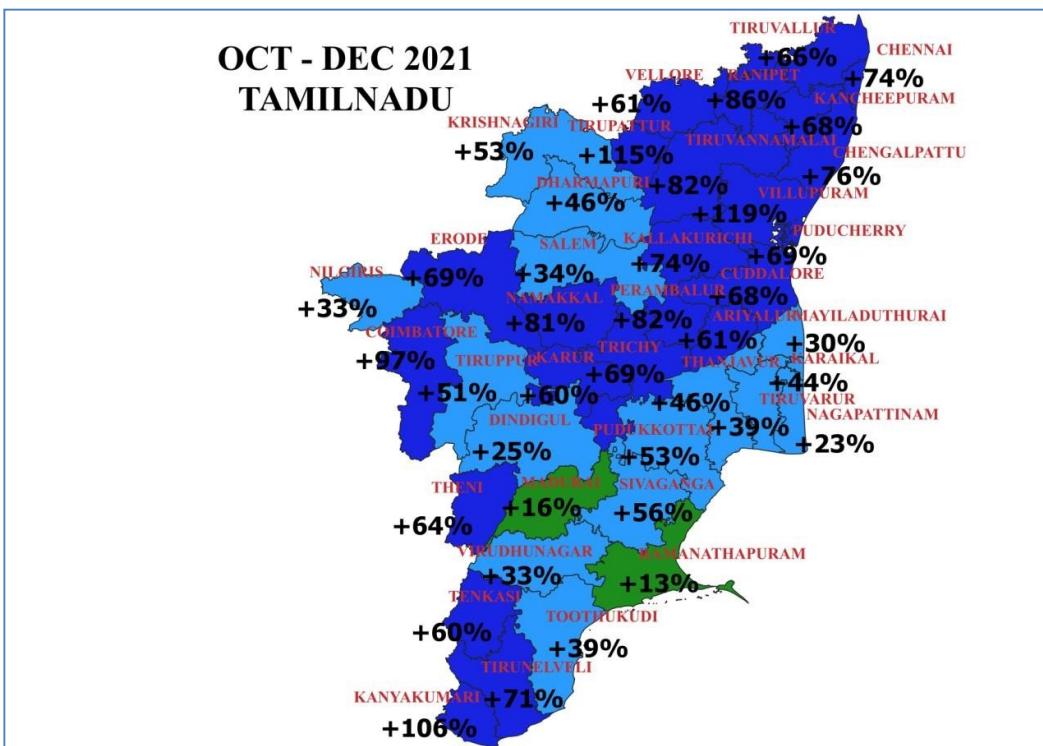

**Table-8:Frequency of various categories of spatial rainfall distribution during October to December 2021**

The intra-seasonal rainfall distribution during Oct-Dec 2021 is presented in monthly, scales. Month-wise rainfall statistics are presented in Table-9.

**Table-9: Sub-divisional monthly rainfall during NEM 2021**

Sub- division	OCT			NOV			DEC		
	Actual (mm)	Normal (mm)	PDN (%)	Actual (mm)	Normal (mm)	PDN (%)	Actual (mm)	Normal (mm)	PDN (%)
TN,Puducherry & Karaikal	228.6	177.6	29%	425.3	179.5	+137%	60.4	92.6	-35%

It is observed that 15-25 days of active to vigorous monsoon conditions prevailed over TN during the season.Regarding heavy rainfall occurrences ( $\geq 7$  cm/day), TN experienced isolated heavy rainfall activity on 50 days during the season, out of which, 16 days were with isolated very heavy falls.

**Table-10: List of very heavy to extremely heavy rainfall events**

## SOILS

The soils of the state can be broadly divided into three type's viz. (1) Red (2) Black and (3) Alluvial soils, of which red soils are the most prominent type. Red soils are found in every district of the state but occupy major parts of the Madurai and Vellore districts. More than 63% of the areal extent of Tiruvallur, Kancheepuram, Salem, Coimbatore, Tirunelveli and Tiruchirappalli districts is covered by the red soils. Some patches of arenaceous soils are also found along the coastal line. Almost all the alluvial soils in the state are confined to the deltaic regions of the Cauvery River in Cuddalore, Nagapattinam, Tiruvarur, Thanjavur and Tiruchirappalli districts. Black soils are seen mostly in parts of Ramanathapuram, Cuddalore, Tirunelveli and Thanjavur districts.

## HYDROGEOLOGY

The state of Tamil Nadu is underlain by geological formations ranging in age from Archaean to Recent. The crystalline rocks of Archaean age like granites, gneisses, charnockites, etc., are of considerable interest as they occupy nearly 73% of the total geographical area of the state. Semi consolidated and consolidated formations ranging in age from Mesozoic to Recent overlie the crystalline basement and their occurrence is confined to the east coast only. The general stratigraphic succession of the formations in the state is presented in Table-4.

**TABLE-4: STRATIGRAPHIC SUCCESSION OF GEOLOGICAL FORMATIONS IN TAMIL NADU & U.T. OF PUDUCHERRY**

ERA	AGE	STAGE	LITHOLOGY
Quaternary	Recent Pleistocene	- -	Soil, alluvium and beach sands Boulder conglomerates, older alluvium and laterites.
Tertiary	Pliocene Miocene	Karaikal beds Cuddalore Sandstone	Sands and clay with fossils, Mottled and friable sandstones, buff coloured clays and gravels.
Mesozoic	Cretaceous	Ninniyur	Arenaceous limestones and sandstones.
		Ariyalur	Sandstones and clays
		Trichirapallai	Sandstones, clays and shell limestones
		Uttattur	Basal limestones, coral clays and sandy beds
	Jurassic	Satyavedu	Ferruginous sandstones and conglomerates
		Sriperum-budur	Clays, shales and feldspathic sandstones
		- Unconformity -	
Azoic	Archaean	Archaean	Gneisses, charnockites and ultra-basic intrusives.

The crystalline complex of the Archaean age forms the oldest of the rock types in the state. Pink and grey granites are exposed in Cuddalore, Villuppuram, Coimbatore, Madurai and Tirunelveli districts. Rocks of the Khondalite group are well exposed in the southern districts of Tamil Nadu. The ultra-mafic rocks are widespread in the districts of Vellore, Dharmapuri, Coimbatore and Salem. Charnockite is more prominent in the northwestern part of Tamil Nadu and is well exposed in the hill ranges of Javadi, Shevroy, Palani and Nilgiris.

The Mesozoic era is represented by the upper Gondwanas of Jurassic age and marine beds of Cretaceous age. The Gondwana beds occur as patches spread over nearly 2001 sq. km. in Tiruvallur, Kancheepuram and Vellore districts. The Cretaceous beds are well exposed in Tiruchirappalli district. The Cretaceous beds overlie the granitic gneisses and charnockites along the western fringe and by alluvium in the north. They are also exposed in Vriddhachalam area of Cuddalore district.

The important Tertiary formations in the state include the Cuddalore sandstones, Karaikal beds and Conjeevaram gravels. They occur in a wide stretch and extend from Karaikudi through Pudukkottai, Thanjavur, Cuddalore, Puducherry to Chennai. Alluvium and coastal sands in the coastal tract and in river valleys overlie them. The Panamparamai sandstones of sub-Recent age occur along the coastal tract of Tirunelveli district.

The nature of the geological formations and the structural features are the principal factors governing the occurrence and movement of ground water in any hydrogeological environment.

Ground water in the hard rocks occurs in the weathered zones ranging in thickness from less than a metre to 25 m and in the underlying fractured and sheared zones. It occurs under water table conditions at shallow levels and under semi-confined to confined conditions in the fractured, jointed and sheared zones as seen in Coimbatore, Salem, Dharmapuri, Madurai districts, etc. In the sedimentaries, ground water occurs under water table and confined conditions.

## **II. DEPTH TO WATER LEVEL**

### **MAY 2021**

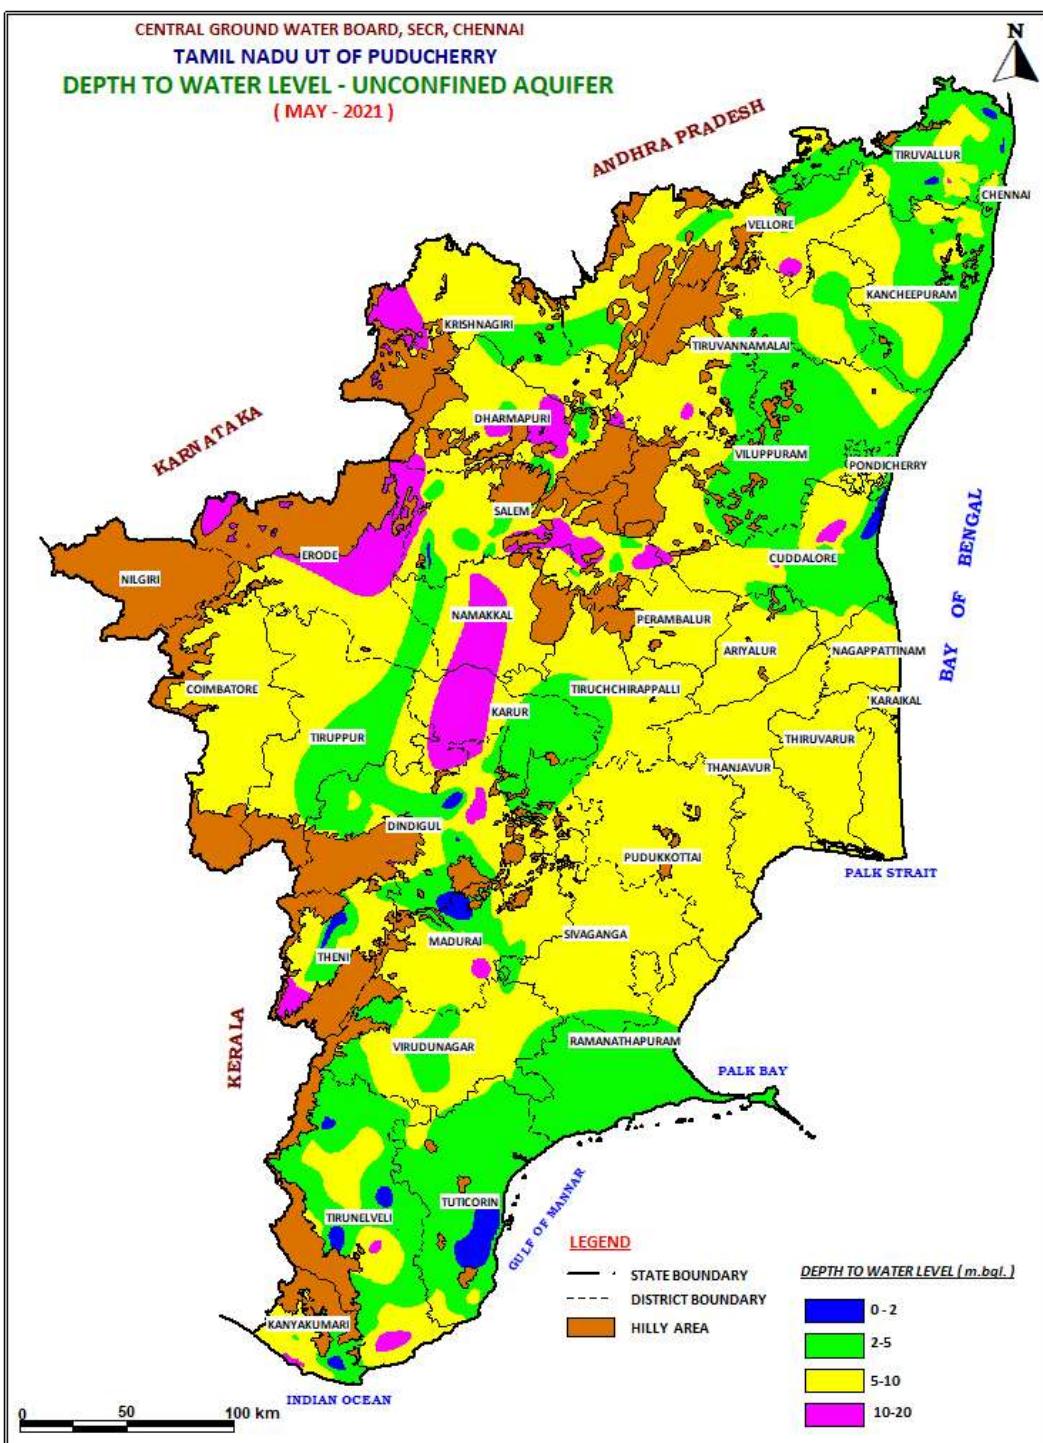

The statement showing the distribution of Ground Water Monitoring wells along with depth to water level of phreatic aquifer in different depth ranges is presented in Table-4 and Plate-IV the behavior of ground water table during May 2021 in Tamil Nadu has been studied by monitoring the dug/Tube wells. The water level data were analysed in detail and salient features are as under.

1. The depth to water level recorded from 0.05 to 17.5 m bgl. Depth to water level over major part of the State (91% of the wells) except western districts, are < 10m bgl. Whereas the western districts have recorded water level of > 10 m bgl. Water levels < 2 m is observed in 8 % of wells spreaded as isolated patches in more number of districts particularly in Cuddalore, Kancheepuram, Kanyakumari, Salem, Pudukkottai,Tirunelveli, Tiruvallur, Theni, Madurai,Chennai,PondicherryDindigul, Tuticorin districts.
2. More than 50% of wells of Cuddalore, Chennai, Kancheepuram, Villupuram, Tirunelveli, Tiruvarur and Tuticorin districts have recorded water level between 2 and 5 mbgl.
3. More than 50% of wells of Virudhunagar, Kanyakumari, Krishnagiri, Theni and Tiruvannamalai districts have recorded water level in 5 – 10 m bglrange,  
9% are showing water level in 10-20 m bgl which are scattered inTirunelveli,Virudhunagar, Kanyakumari,Dharmapuri, Krishnagiri, Vellore Madurai Dindigul ,Cuddalore, Kancheepuram, Tiruvannamalai,Tiruvallur, Salem, and Thenidistricts

**Plate-IV**

**Depth to Piezometric Surface:**

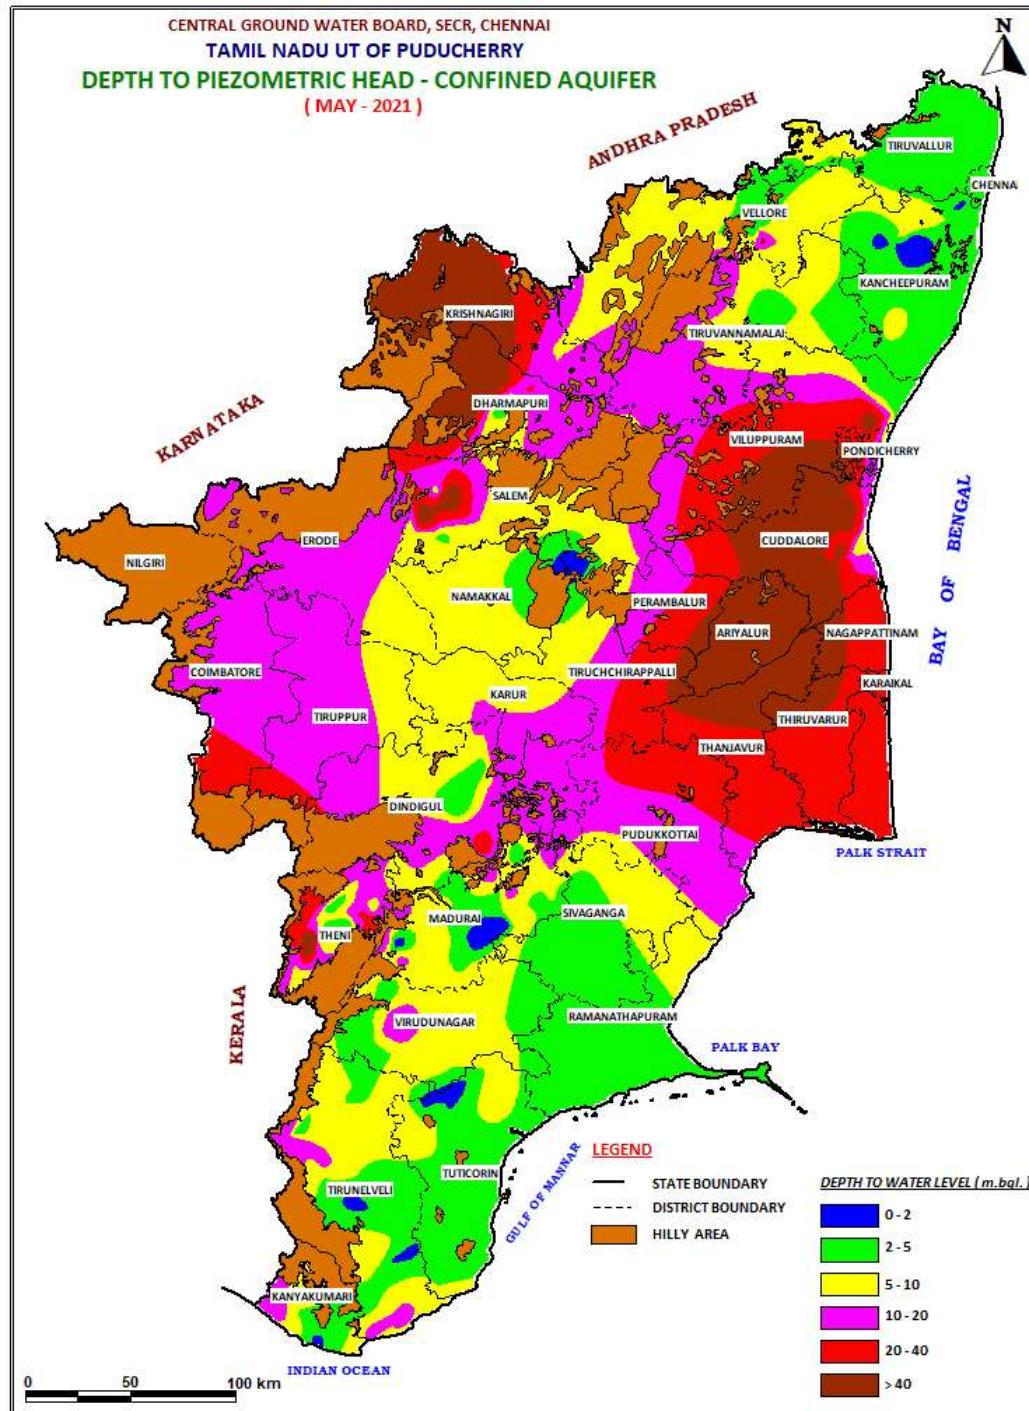

Depth to piezometric surface has been recorded from piezometers spread all over the state both in hardrock and soft rock areas. The statement showing the depth to piezometric surface is given in **Table-5**. The ground water scenario of Confined aquifer May 2021 is presented in **Plate-V**. Salient features of the depth to piezometric surface during May 2021 are given below.

1. The piezometric surface ranged from 0.5 (Kancheepuram district) m to 109.5 m bgl (Cuddalore district).
2. 58 % of wells have recorded depth to piezometric surface within 10 mbgl.
3. 14.7 % of wells show depth to piezometric surface between 10 to 20 mbgl.
4. 9.8% of the wells recorded piezometric surface between 20 to 40mbgl.
5. 16.9 % of the wells recorded more than 40 mbgl.

Plate-V

## August 2021

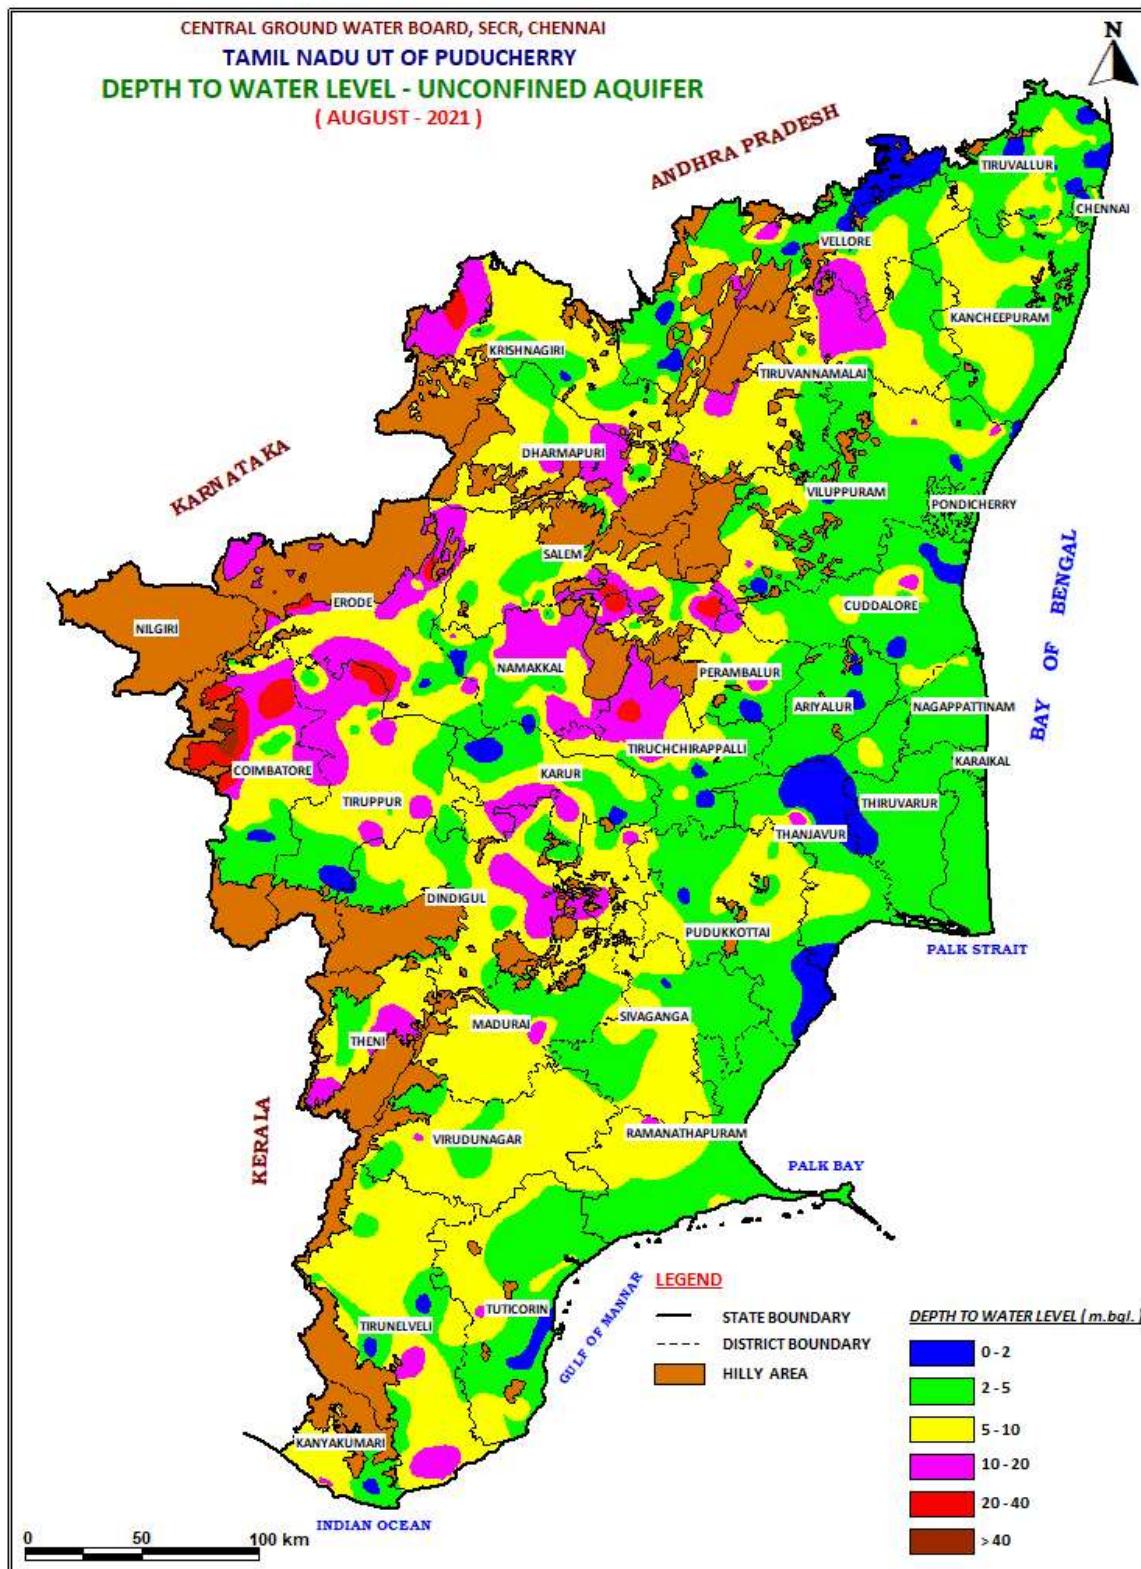

The statement showing the distribution of Ground Water Monitoring wells along with depth to water level of phreatic aquifer in different depth ranges is presented in **Table-6** and **Plate-VI** depicts the ground water scenario in August 2021. Salient features of the depth to water level scenario during August 2021 are given below.

1. The depth to water level recorded from 0.25 (Kancheepuram district) to 45.26 m bgl (Coimbatore district).
2. Depth to water level over major part of the State (85% of the wells), particularly in the central and Eastern parts are < 10m bgl. Where as the central and north western parts have recorded shows water level of > 10 mbgl.
3. Depth to water level in the range of >2 m bgl has been recorded in 11.4% of wells analysed
4. Depth to water level in the range of 2 to 5 m bgl has been recorded in 38.9% of wells analysed.
5. Depth to water level in the range of 5 to 10 m bgl has been recorded in 34.5% of wells analysed.
6. Depth to water level in the range of 10 to 20 m bgl has been observed in 13.3 % of wells analysed.
7. Depth to water level in the range of 20 to 40 m bgl has been observed in 1.5 % of wells analysed
8. Depth to water level in the range of more than 40 m bgl has been observed in 0.1 % of wells analysed
9. More than 50% of wells of Ariyalur, Ramanathapuram, Perambalur, Nagapattinam, Karaikal, Kancheepuram, Cuddalore, Puducherry and Tiruvarur districts have recorded water level in 2-5 m bgl range.
10. More than 50% of wells of Kanyakumari, Madurai, Theni, Tiruvannamalai, Virudunagar and Erode districts have recorded water level in 5 – 10 m bgl range.

## **Depth to Piezometric Surface:**

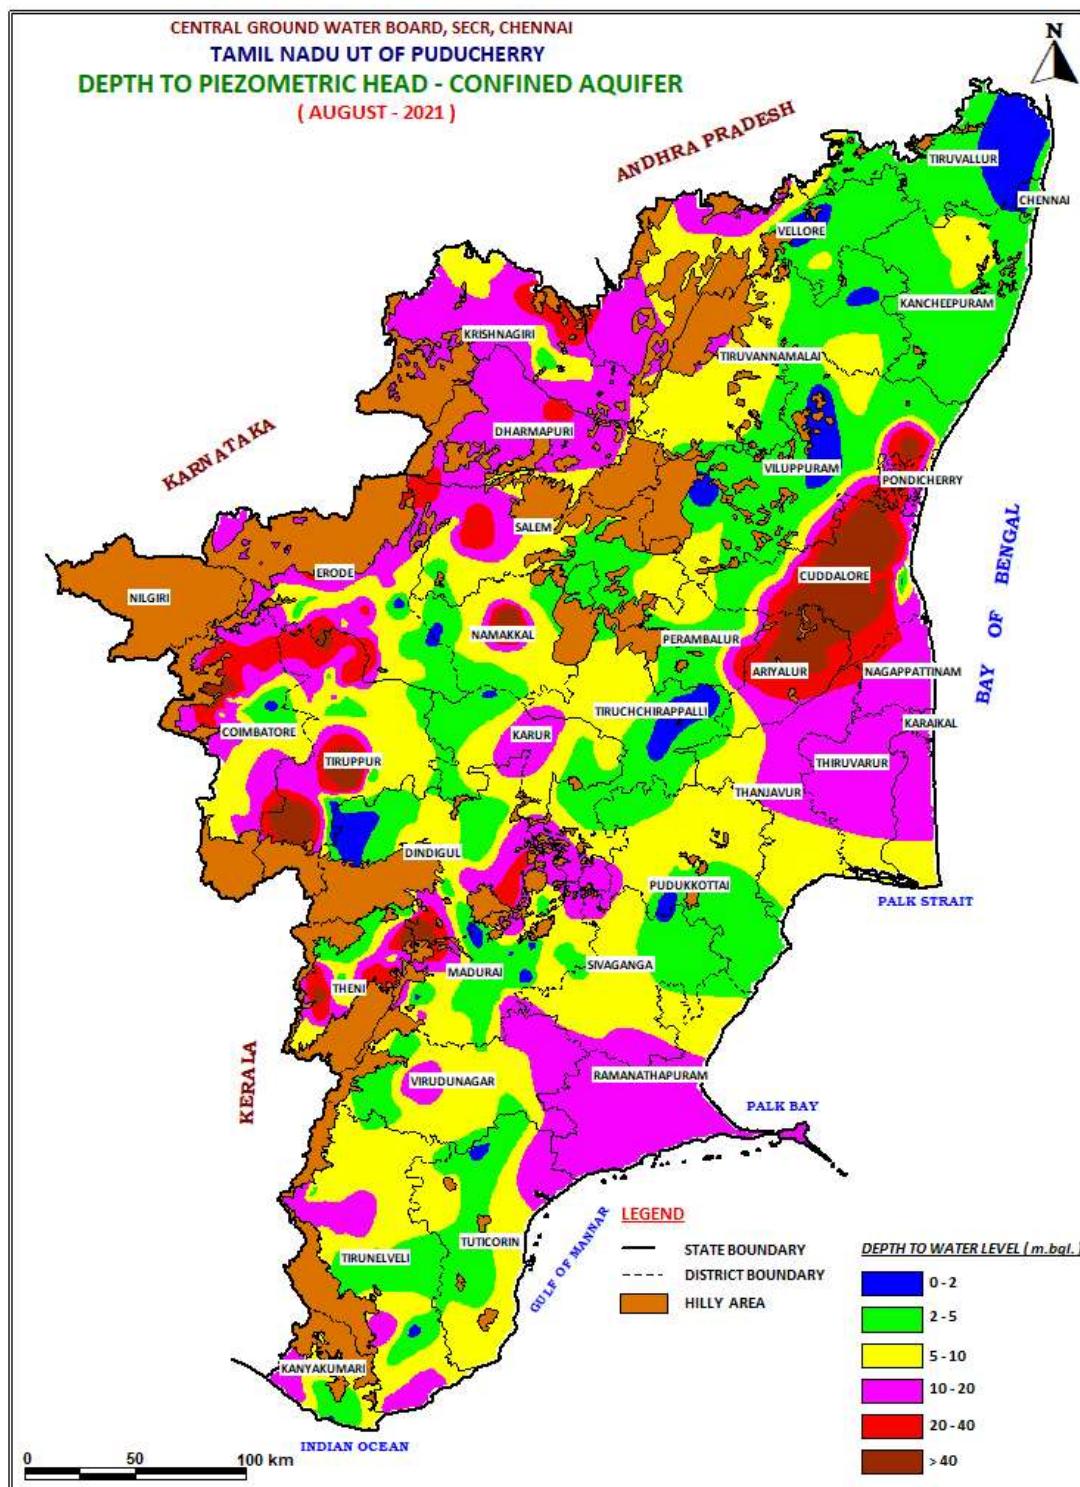

Depth to piezometric surface has been recorded from piezometers spread all over the state both in hardrock and soft rock areas. The statement showing the depth to piezometric surface is given in **Table-7**. The ground water scenario of Confined aquifer in August 2021 is presented in **Plate-VII**. Salient features of the depth to piezometric surface during August 2021 are given below.

1. The piezometric surface ranged from 0.12(Vellore district) m to 195.4 m bgl (Cuddalore district).
2. 60.18 % of wells have recorded depth to piezometric surface within 10 mbgl.
3. 15.9 % of wells show depth to piezometric surface between 10 to 20 mbgl.
4. 11.3 % have recorded piezometric surface between 20 to 40mbgl.
5. 12.5% have recorded more than 50 mbgl.
6. More than 50% of wells of Cuddalore district have recorded Piezometric head in >50 m bgl range.

**Table-7: Frequency distribution of depth to Piezometric surface (August 2021)**

District	No. of Wells Analysed	Depth to Piezometric surface in the range of (mbgl)

## **November 2021**

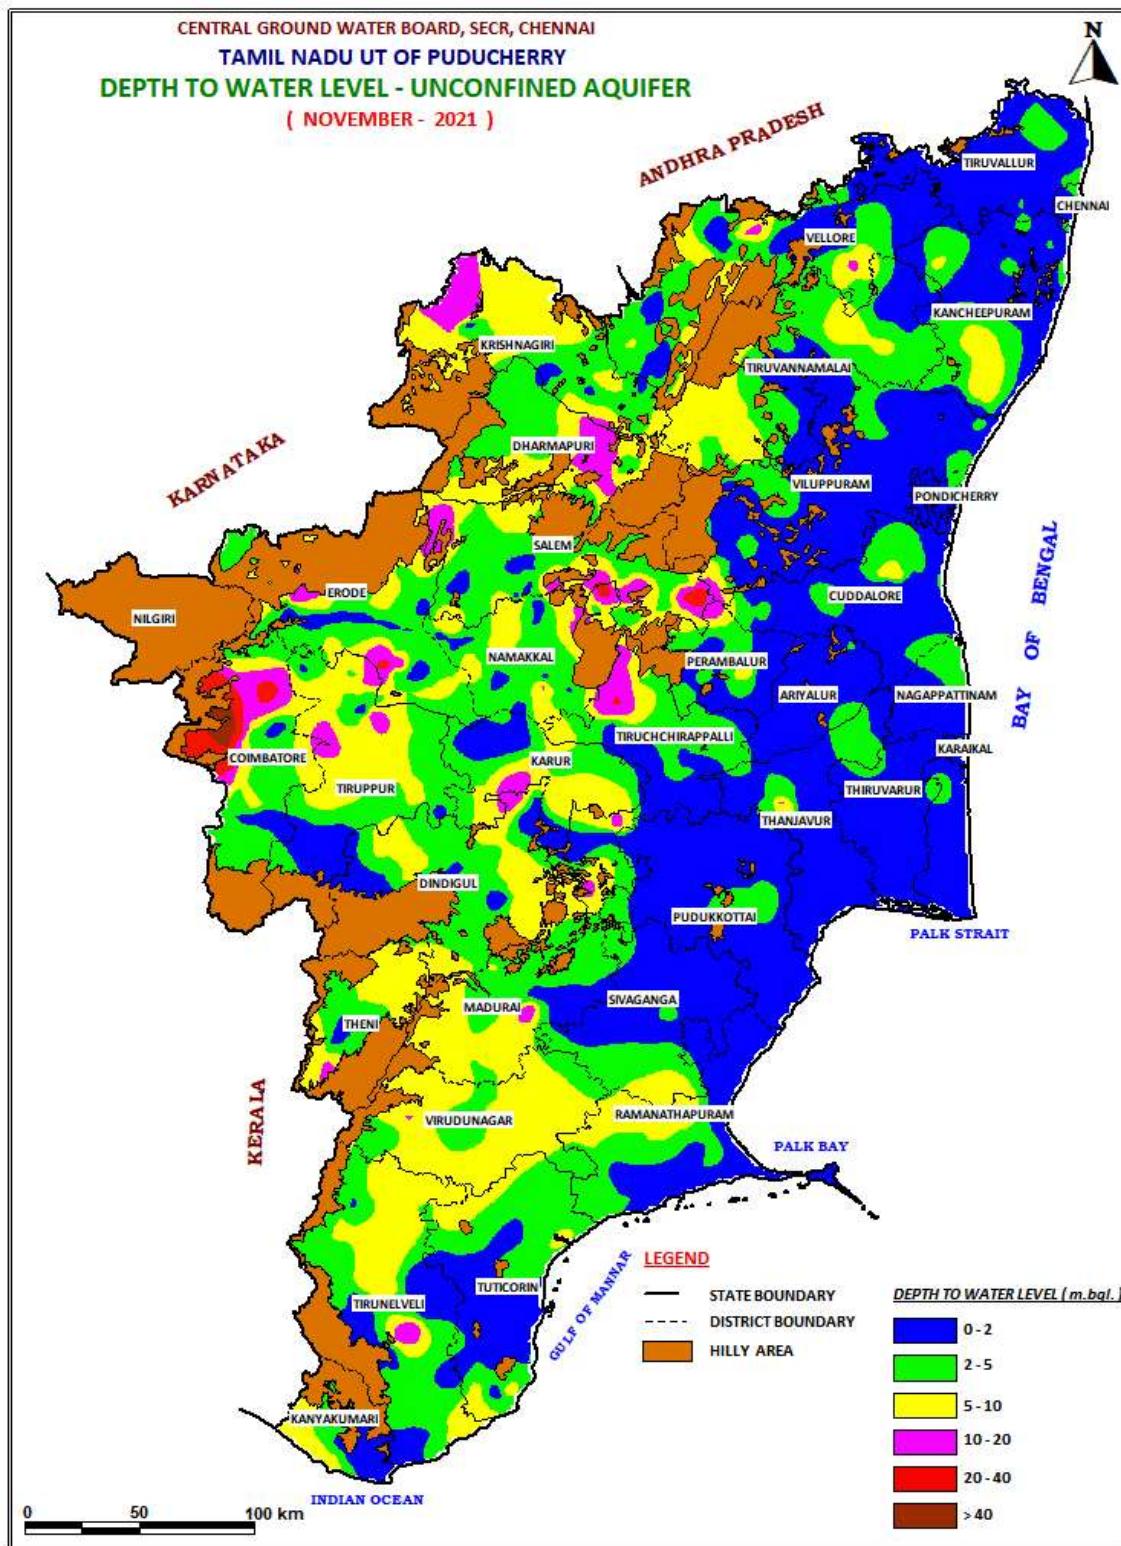

The statement showing the distribution of Ground Water Monitoring wells along with depth to water level of phreatic aquifer in different depth ranges is presented in **Table-8** and **Plate-VIII** depicts the ground water scenario in November 2021. Salient features of the depth to water level scenario during November 2021 are given below.

1. The depth to water level recorded from 0.05 (Dindigul & Vellore district) to 47.58 m bgl (Coimbatore district).
2. Depth to water level over major part of the State (93% of the wells), particularly in the central and Eastern parts are < 10m bgl. Where as the central and north western parts have recorded shows water level of > 10 mbgl.
3. Depth to water level of less than 2 m bgl has been recorded in 46 % of wells analysed and noted in all over the State and U.T.of Puducherry except Virudhunagar and Dharmapuri districts.
4. Depth to water level in the range of 2 to 5 m bgl has been recorded in 29 % of wells analysed and noted in all the districts except in Thiruvarur district.
5. Depth to water level in the range of 5 to 10 m bgl has been recorded in 18% of wells analysed.Except Pudukkottai,Sivaganga, Villupuram, Ariyalur,Thiruvarur,Nagapattinam, Karaikal, Chennai,Tiruvallur districts and U.T of Pondicherry all other districts recorded depth to water level in the range of 5 to 10 m bgl.
6. Depth to water level in the range of 10 to 20 m bgl has been observed in 6% of wells analysed and noted in the Northern, central and western parts of the State and as small pockets on the southern part. Depth to water level in the range of more than 20 m bgl has been noted in one percentage of wells analysed and noted in Namakkal, Erode, Salem, Thiruchirappalli and Coimbatore districts.

Table : 8 Depth to Water Table November 2021  
 Distribution of Percentage of Observation Wells

**Plate-VIII**

## **Depth to Piezometric Surface:**

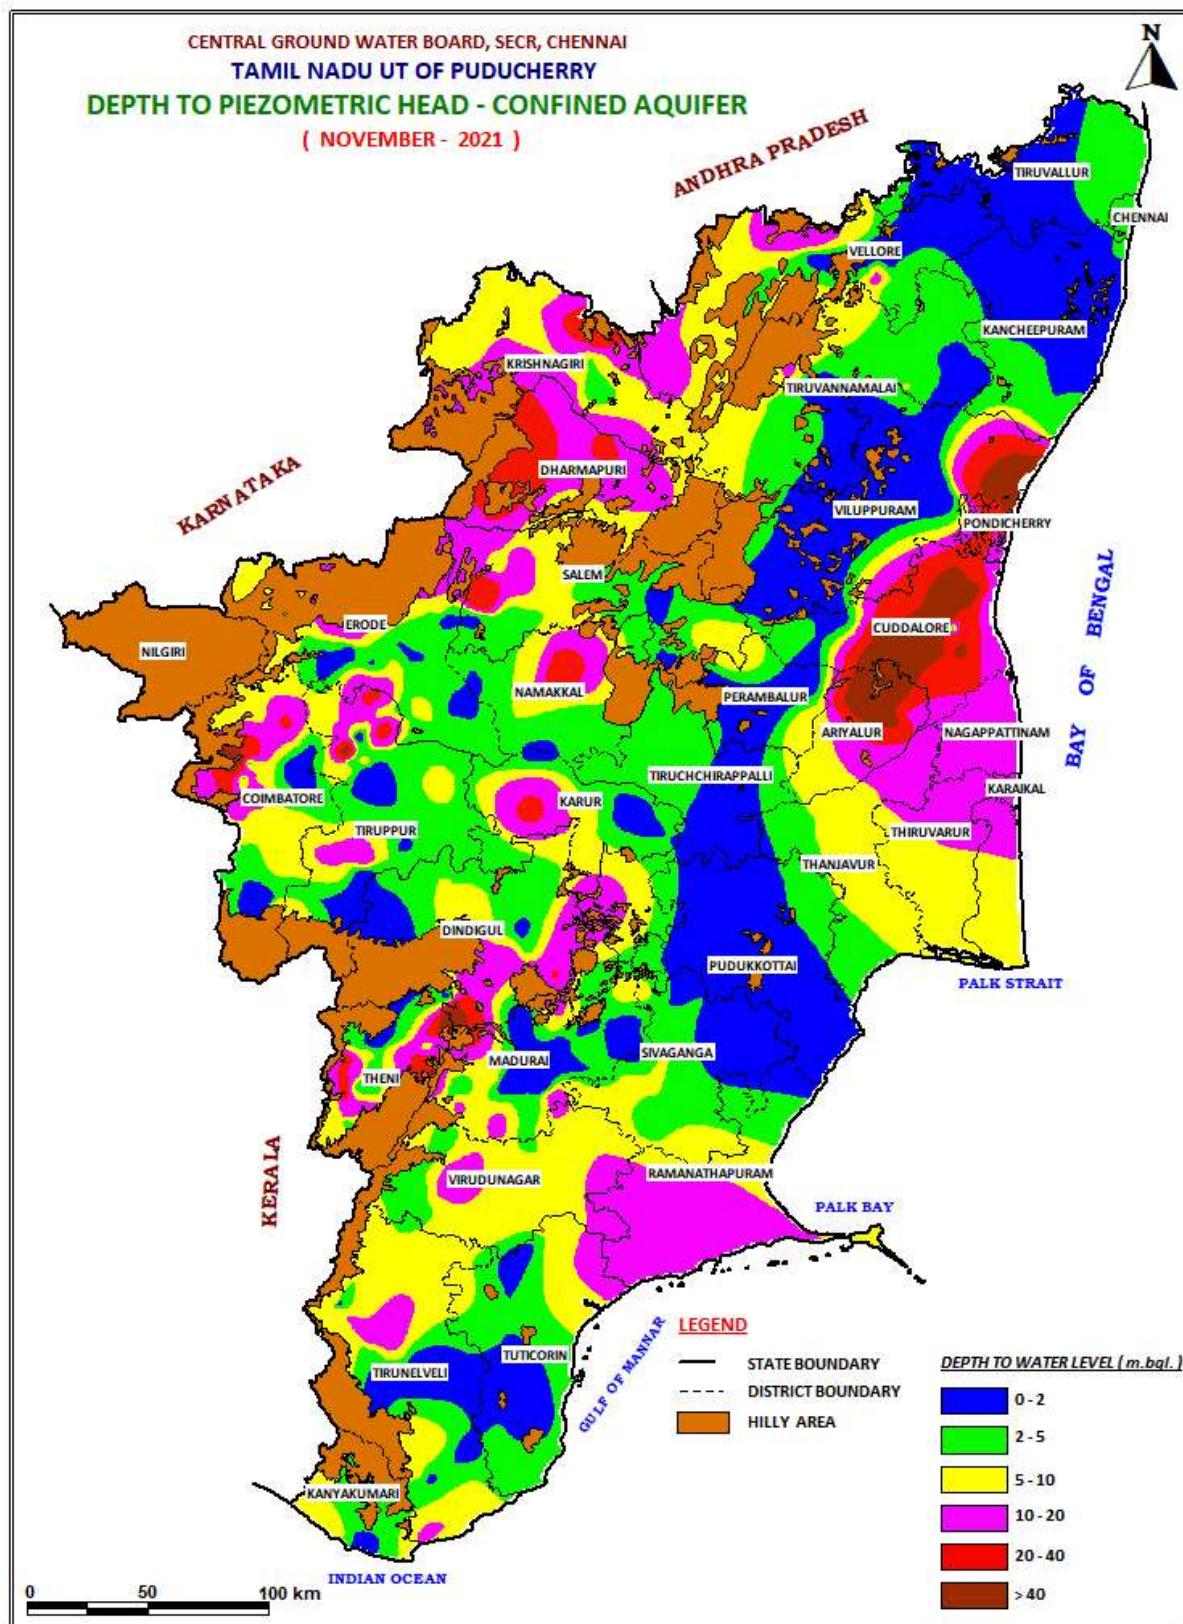

Depth to piezometric surface has been recorded from piezometers spread all over the state both in hardrock and soft rock areas. The statement showing the depth to piezometric surface is given in **Table-9**. The ground water scenario of Confined aquifer during November 2021 is depicted in **Plate-IX**. Salient features of the depth to piezometric surface during November 2021 are given below.

1. The piezometric surface ranged from 0.05 (Villupuram district) to 84.06 m bgl (Ariyalur district).
2. 70 % of wells have recorded depth to piezometric surface within 10 mbgl, while 13 % of wells show depth to piezometric surface between 10 to 20 mbgl and 07 % more than 20 m bgl.
3. Depth to piezometric surface of less than 2 m bgl has been recorded in 25% of wells analysed and this has been noted all the districts except in the districts of Ramanathapuram, Virudhunagar, Krishnagiri, Ariyalur, Pondicherry, Dharmapuri, Thanjavur, Nagapattinam, Thiruvarur Karaikal and Nilgiri
4. Depth to piezometric surface in the range of 2 to 5 m bgl has been recorded in 25 % of wells analysed and noted in all the districts except in the districts of Ramanathapuram, Pudukkottai, Dharmapuri, Villupuram, Perambalur, Ariyalur, Thiruvarur, Thanjavur, and Karaikal district.
5. Depth to piezometric surface in the range of 5 to 10 m bgl has been recorded in 20 % of wells analysed and noted in Coimbatore, Cuddalore, Dharmapuri, Dindigul, Erode, Kanyakumari, Ariyalur, Madurai, Virudhunagar, Tuticorin, Sivaganga, Salem, Tirupur, Tirunelveli, Krishnagiri, Vellore, Namakkal, Theni and Tiruvannamalai districts.
6. Depth to piezometric surface in the range of 10 to 20 m bgl has been observed in 13 % of wells analysed. Depth to piezometric surface in the range of more than 20 mbgl has been noted in 7% of wells analysed covering isolated pockets in the districts viz. Theni, Namakkal, Dindigul, Erode, Dharmapuri, Salem, Krishnagiri, Villupuram, Ariyalur, Cuddalore, Pondicherry, Karur and Coimbatore districts.

**Table-9: Frequency distribution of depth to Piezometric surface (November 2021)**

District	No. of Wells Analysed	Depth to Piezometric surface in the range of (mbgl)					
		0-2	2-5	5-10	10-20	20-40	>40

## **January 2022**

The statement showing the distribution of ground Water Monitoring wells along with depth to water levels in phreatic aquifer in different depth ranges is presented in **Table-10**and **Plate-X** depicts the ground water scenario in January 2022.

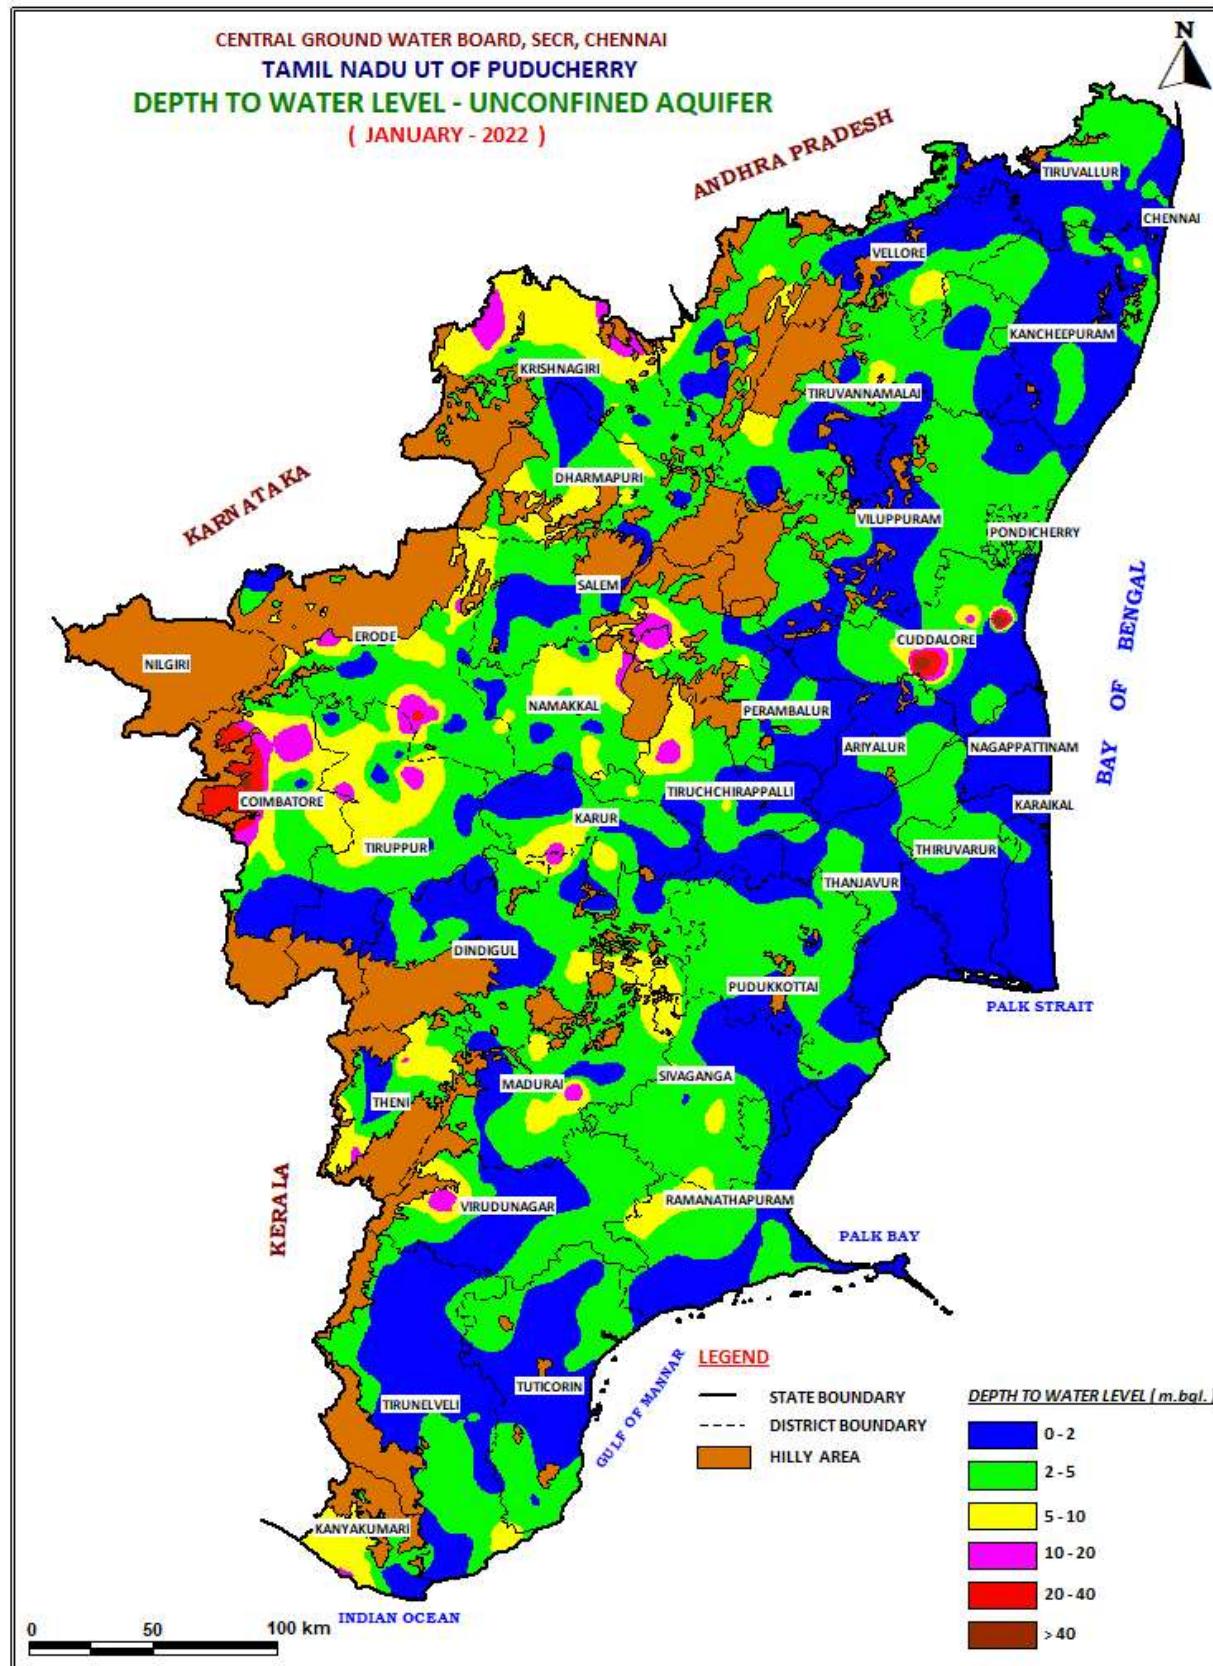

1. A perusal of the water level data reveals that the depth to water level ranged from 0.02 m bgl (Tiruvallur district) to 40.88 m bgl (Coimbatore District) in Tamil Nadu and UT of Puducherry.
2. Overall 96% of the wells monitored in the state and UT are in <10 m bgl range and spreaded over entire Tamil nadu.
3. 4 % of wells show depth to water level between 10 to 20 m bgl and less than 1 % of wells show depth to water level more than 20 m bgl.
4. Depth to water level of less than 2 m bgl has been recorded in 43 % of wells analysed and noted in all over the State and U.T.of Puducherry.
5. Depth to water level in the range of 2 to 5 m bgl has been recorded in 40 % of wells analysed and noted in all the districts except in Karaikal district.
6. Depth to water level in the range of 5 to 10 m bgl has been recorded in 12% of wells analysed. Except,Tuticorin, Pudukkottai,Villupuram,Perambalur,Ariyalur,Thiruvarur, Thanjavur, Nagapattinam, Karaikal, Chennai and Tiruvallur districts and U.T.of Puducherry all other districts recorded depth to water level in the range of 5 to 10 m.bgl.
7. Depth to water level in the range of 10 to 20 m bgl has been observed in 4% of wells analysed and noted in the western parts of the State covering most of the districts in uplands and as small pockets on the northern and central side. Depth to water level in the range of more than 20 m bgl has been noted in less than one percentage of wells analysed and noted in Coimbatore and Erode districts

**Table 10: Depth to Water Table (January 2022)**

## **Depth to Piezometric Surface:**

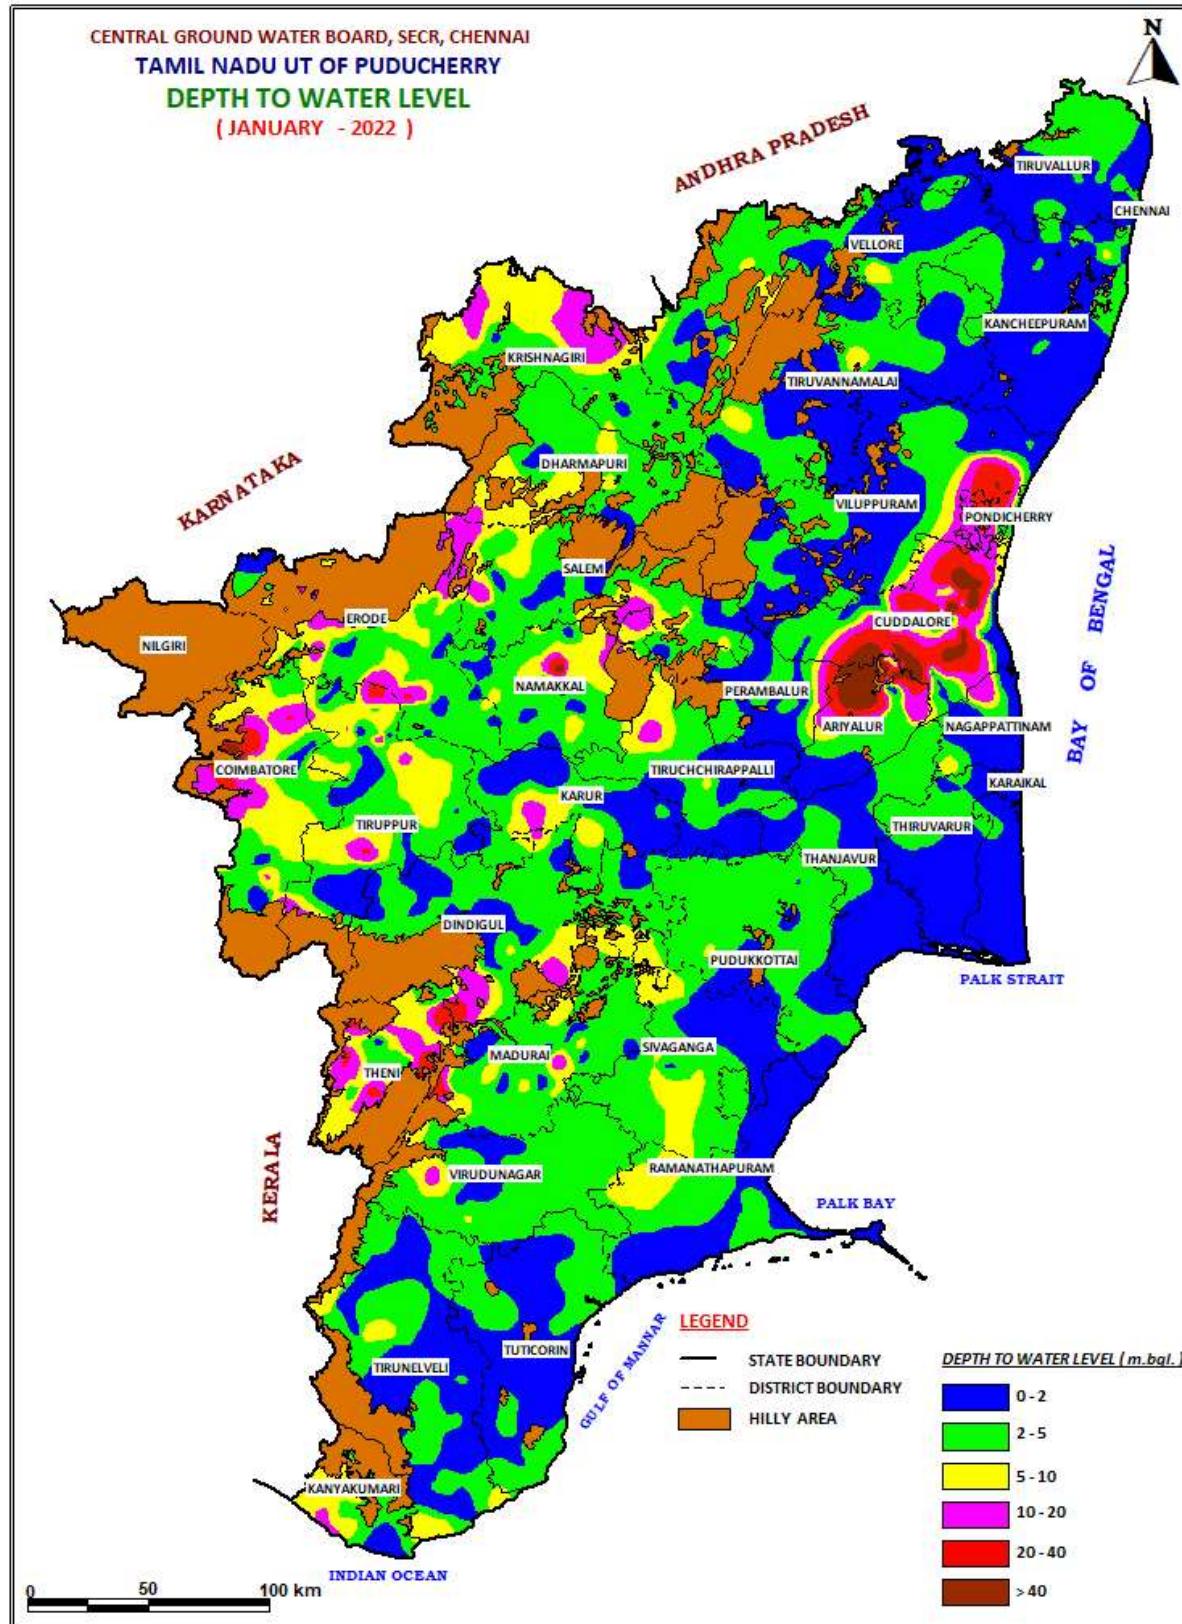

Depth to piezometric surface has been recorded from piezometers spread all over the state both in hardrock and soft rock areas. The statement showing the depth to piezometric surface is given in **Table-11**. The ground water Scenario of Confined aquifer during January 2022 is depicted in **Plate-XI**. Salient features of the depth to piezometric surface during January 2022 are given below.

1. The depth to piezometric surface ranged from 0.04 m bgl (Chennai district) to 88.11m bgl (Cuddalore District) in Tamil Nadu and UT of Puducherry.
2. 72% of wells have recorded depth to piezometric surface of less than 10mbgl.
3. 11.3 % of wells show depth to piezometric surface between 10 to 20 mbgl.
4. 7.3 % have recorded piezometric surface between 20 to 40mbgl.
5. 8.7 % have recorded more than 40 mbgl.
6. Depth to piezometric surface of less than 2 m bgl has been recorded in 29% of wells analysed and this has been noted all the districts except in the districts of Ramanathapuram, Sivaganga, Krishnagiri, Ariyalur, Pondicherry, Thiruvarur, Thanjavur, Nagapattinam, Karaikal and Nilgiri districts.
7. Depth to piezometric surface in the range of 2 to 5 m bgl has been recorded in 26 % of wells analysed and noted in all the districts except in the districts of Ramanathapuram, Perambalur, Ariyalur, Tiruvarur, Thanjavur, Karaikal, Nilgiri, and Tiruvannamalai district.
8. Depth to piezometric surface in the range of 5 to 10 m bgl has been recorded in 17 % of wells analysed and noted in Coimbatore, Cuddalore, Dharmapuri, Dindigul, Erode, Kanyakumari, Ariyalur, Madurai, Pudukkottai, Virudhunagar, Salem, Sivaganga, Theni, Nilgiri, Tirupur, Tirunelveli, Krishnagiri, Vellore, Namakkal, Ramanathapuram districts.

**Plate-XI**

### **III. FLUCTUATION OF WATERLEVEL**

The water level fluctuation denotes the cumulative effect of southwest and northeast monsoons and ground water development during the period. Rise denotes adequate compensation of the ground water development and fall denotes inadequacy of recharge.

Three types of fluctuations have been calculated, viz. 1) Decadal and 2) Annual fluctuations

#### **Decadal Fluctuation**

#### **FLUCTUATION BETWEEN DECADAL MEAN WATER LEVEL & WATER LEVEL**

The fluctuation of water level recorded during the particular period with respect to decadal mean of the same period indicate the impact of ground water development and ground water recharge during the decade. Positive fluctuation indicates improved recharge over and above ground water development and negative fluctuation indicates increased ground water development over and above therecharge.

#### **Mean Water Levels For The Period May 2011-2020 &May 2021:**

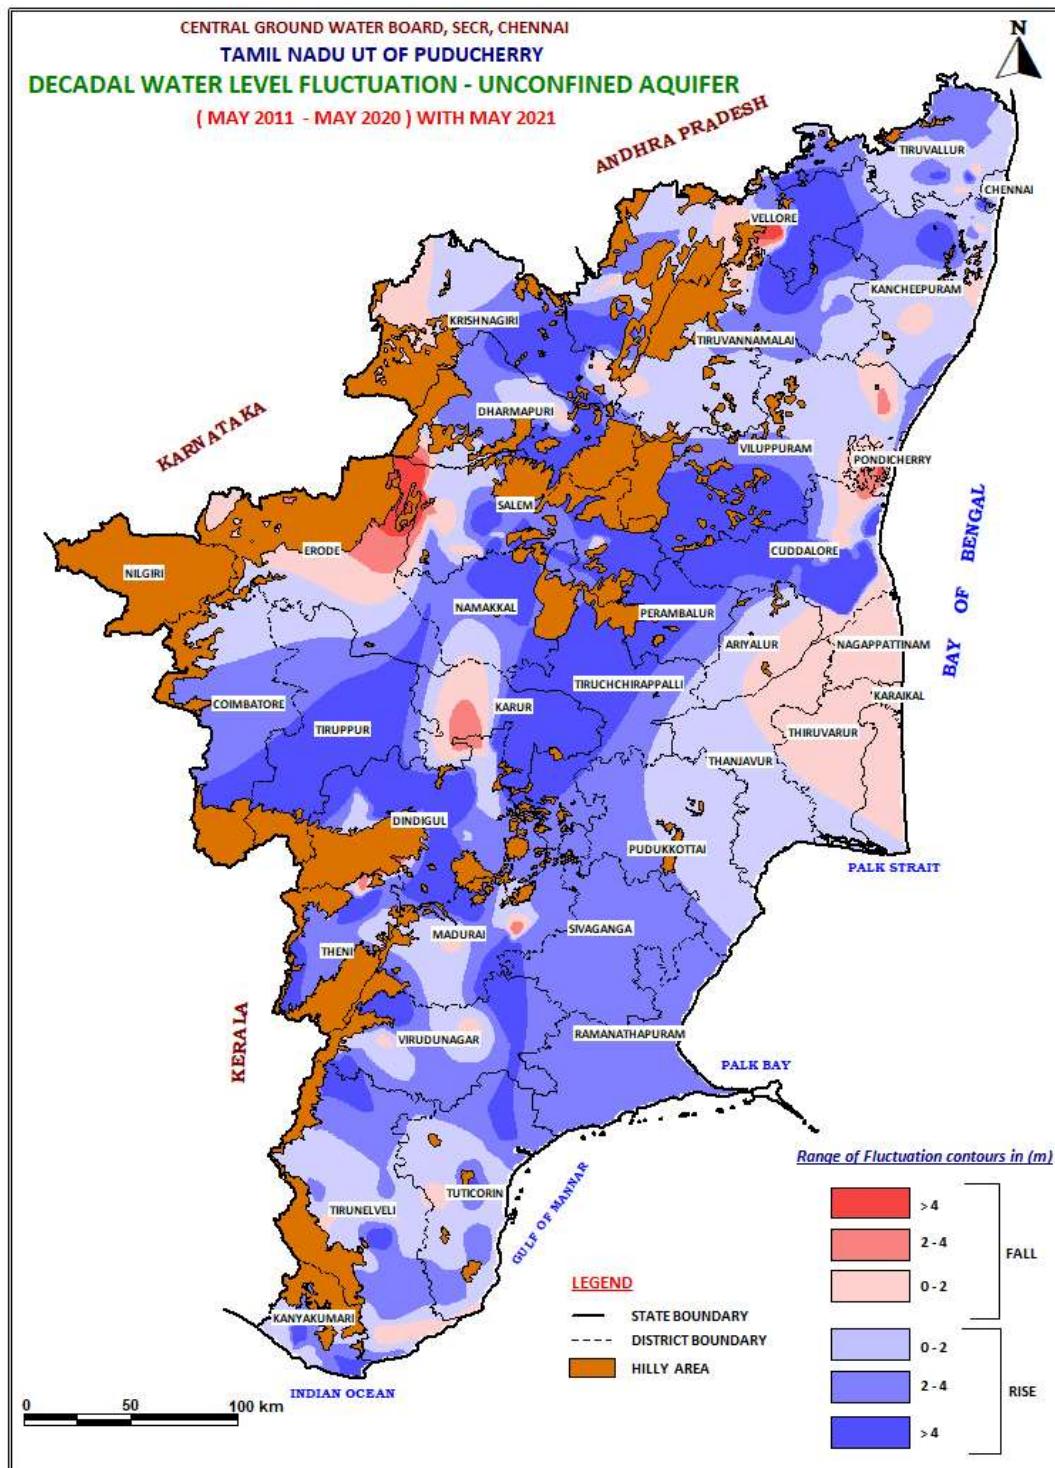

The statement showing the distribution of ground water monitoring wells falling in different ranges of fluctuation is presented in **Table-12**and **Plate-XII**. A comparison of water level shows that a rise in the water level is recorded in 80.8% of wells analysed, while 19.1% recorded fall. Salient features of the comparison of water levels are given below. The rise is mainly in 0-2 &>4 m range and the fall is mainly in the range of 0-2 &>4 m.

1. The entire state have recorded rise in more than 50% wells except Dindigul district of thestate.
2. Rise in the water level in the range of 0-2m has been observed in 36.9% of wells analysed, noted all over the State except Krishnagiri and Dindigul districts.
3. Rise in the water level of 2 to 4 m has been observed in 21.5% and of wells analysed and noted mainly in Kancheepuram, Tiruvannamalai, Tiruvallur, Tirunelveli, Pondicherry, Tuticorin, Virudhunagar, Kanyakumari, Theni, Madurai, Dharmapuri, Salem, Villupuram, Cuddalore districts.
4. Rise in the water level more then 4 m has been observed in 22.4% of wells analysed
5. The fall in water level in the range of 0-2m has been observed in 16.4% of wells analysed
6. The fall in water level in the range of 2-4m has been observed in 1% of wells analysed and noted in Dindigul, Madurai and Villupuram districts
7. The fall in water level more than 4 m has been observed in 1.7% of wells analysed and noted in Dindigul, Theni, Vellore, Salem andPondicherry.

### **Confined Aquifer:**

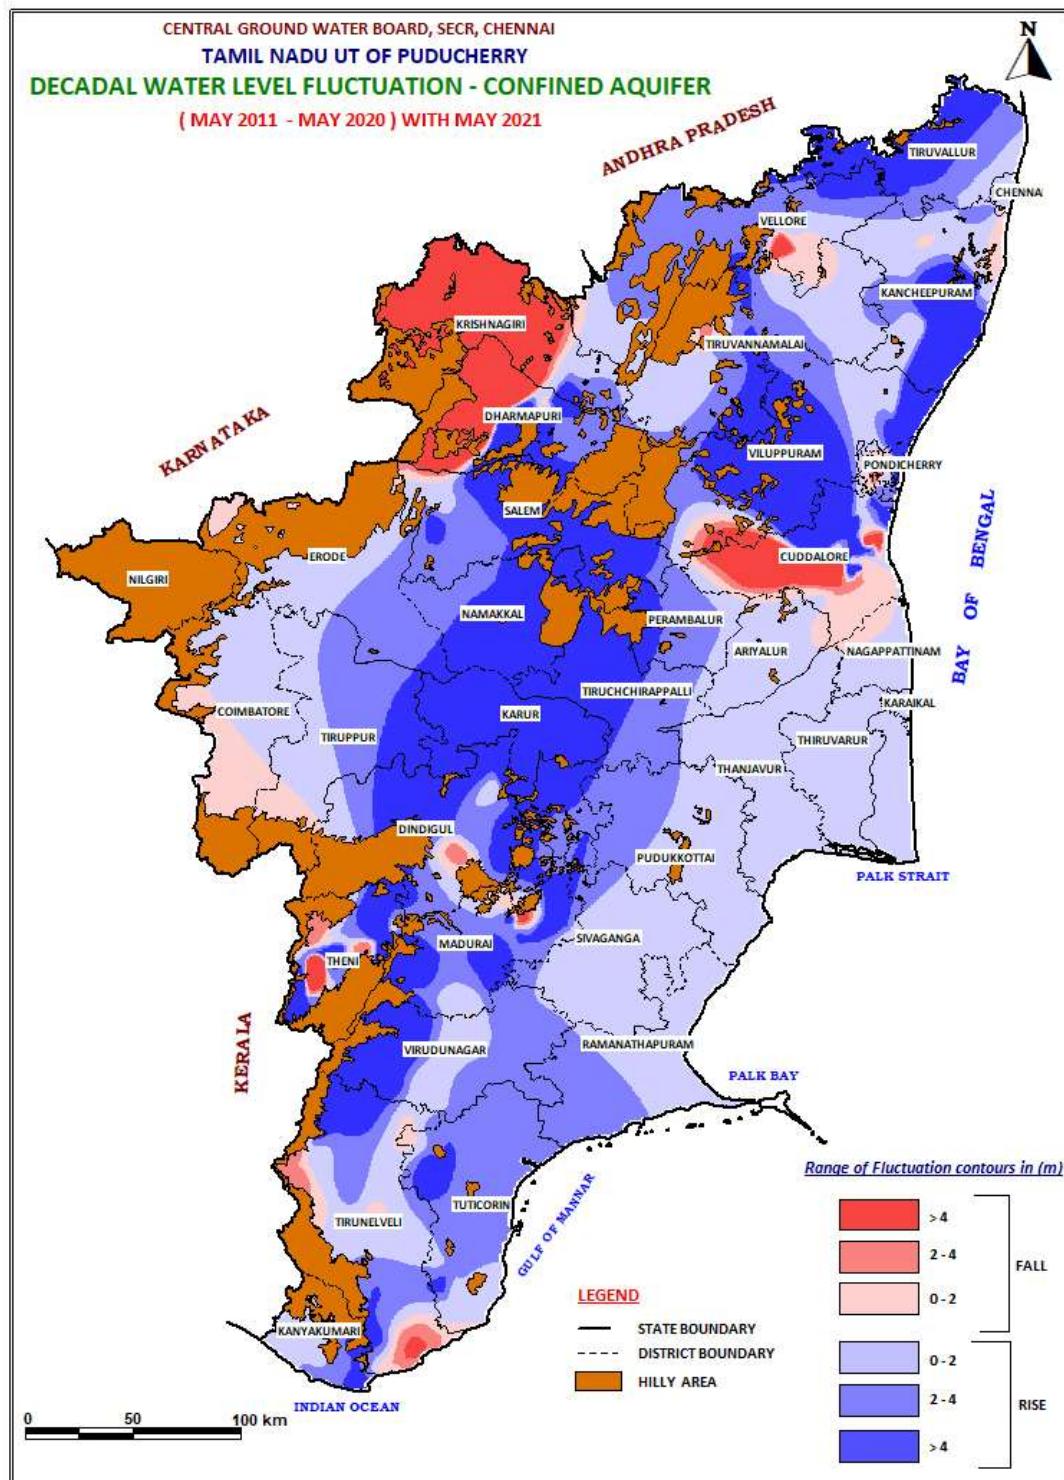

The Piezometric surface data of May 2021 were compared with mean water level for the period May 2011-2020. The district-wise distribution of Ground water monitoring wells falling in different ranges of water level fluctuation is presented in **Table-13**and **Plate-XIII**. A comparison of water level shows a rise in 76% and a fall in 24% of the wells. While rise is more in >4 m range the fall is mainly in 0-2 mrangle.

1. The entire state have recorded rise in more than 50% wells
2. Rise in the water level in the range of 0-2m has been observed in 20% of wells analysed, spread all over the State, except Dharmapuri, and Perambalur, Ariyalur and Tiruvallur districts.
3. Rise in the water level in the range of 2-4 m has been observed in 24% of wells analysed
4. Rise in water level more than 4 m has been observed in 32% of wells analysed
5. The fall in water level in the range of 0-2m has been observed in 10% of wells analysed and noted in Cuddalore, Pondicherry, Kancheepuram, Theni, Dharmapuri, Tiruvannamalai, Chennai Madurai, Tirunelveli and Tuticorin districts.
6. The fall in water level in the range of 2-4m has been observed in 6% of wells analysed and noted in Tirunelveli, Dindigul, Vellore, VillupuramCuddalore, Tiruvannamalai and Theni districts.
7. Fall in water level more than 4 m has been observed in 8% of wells analysed and noted mostly Tirunelveli, Madurai, Dharmapuri, Vellore, Villupuram, Cuddalore and Theni districts of the state and Puducherry region of UT of Puducherry.

### **Mean Water Levels For The Period August 2011-2020& August 2021:**

The statement showing the distribution of ground water monitoring wells falling in different ranges of fluctuation is presented in **Table-14**and **Plate-XIV**. A comparison of water level shows that a rise in the water level is recorded in 78% of wells analysed, while 22% recorded fall. Salient features of the comparison of water levels are given below. The rise is mainly in 0-2 & 2-4 m range and the fall is mainly in the range of 0-2 & 2-4 m.

1. The entire state have recorded rise in more than 50% wells
2. Rise in the water level in the range of 0-2m has been observed in 42% of wells analysed, noted all over the State.
3. Rise in the water level of 2 to 4 m has been observed in 21% of wells analysed
4. Rise in the water level more then 4 m has been observed in 14% of wells analysed
5. The fall in water level in the range of 0-2m has been observed in 16% of wells analysed and spread all over the State and U.T. of Puducherry, except Krishnagiri and Chennai district.
6. The fall in water level in the range of 2-4m has been observed in 4% of wells analysed
7. The fall in water level more than 4 m has been observed in 2% of wells analysed and noted mainly in Tuticorin, Theni, Coimbatore, Erode, Cuddalore, Namakkal, Tiruchirappalli, Tiruppur, Salem andTiruvannamalai districts.

### **Confined Aquifer:**

The Piezometric surface data of August 2021 were compared with mean water level for the period August 2011-2020. The district-wise distribution of Ground water monitoring wells falling in different ranges of water level fluctuation is presented in **Table-18**. A comparison of water level shows a rise in 73.2% and a fall in 26.8% of the wells. While rise is more in 0-2 m range the fall is mainly in 0-2 m range.

1. The entire state have recorded fall in more than 25% wells except Chennai, Dindigul, Kanyakumari, Perambalur, Pudukkottai, Sivagangai, and Virudhunagar districts of the state and other districts viz., Nilgiris, Thanjavur, Tiruvarur, Trichy and Tiruvallur districts of the state and Karaikal region of UT of Puducherry.
2. Rise in the water level in the range of 0-2m has been observed in 24.7% of wells analysed, spread all over the State, except Dharmapuri, Nagapattinam, Pudukkottai, Ramanathapuram, Tiruvallur and Vellore districts.
3. Rise in the water level in the range of 2-4 m has been observed in 13.7% of wells analysed and noted mainly Coimbatore, Madurai, Erode, Madurai, Tirunelveli districts.
4. Rise in water level more than 4 m has been observed in 34.7% of wells analysed and noted mainly in Coimbatore and Cuddalore Madurai, Theni districts.
5. The fall in water level in the range of 0-2m has been observed in 12% of wells analysed and noted in Coimbatore, Cuddalore, Dindigul, Erode, Madurai, Nagapattinam and Theni districts.
6. The fall in water level in the range of 2-4m has been observed in 4.1% of wells analysed and noted in Coimbatore, Cuddalore, Karur, Ramanathapuram districts and UT of Puducherry.
7. Fall in water level more than 4 m has been observed in 10.7% of wells analysed and noted mostly Ariyalur, Coimbatore, Cuddalore, Erode, Namakkal and Theni districts of the state and Puducherry region of UT of Puducherry.

## **Mean Water Levels For The Period November 2011-2020 & November 2021:**

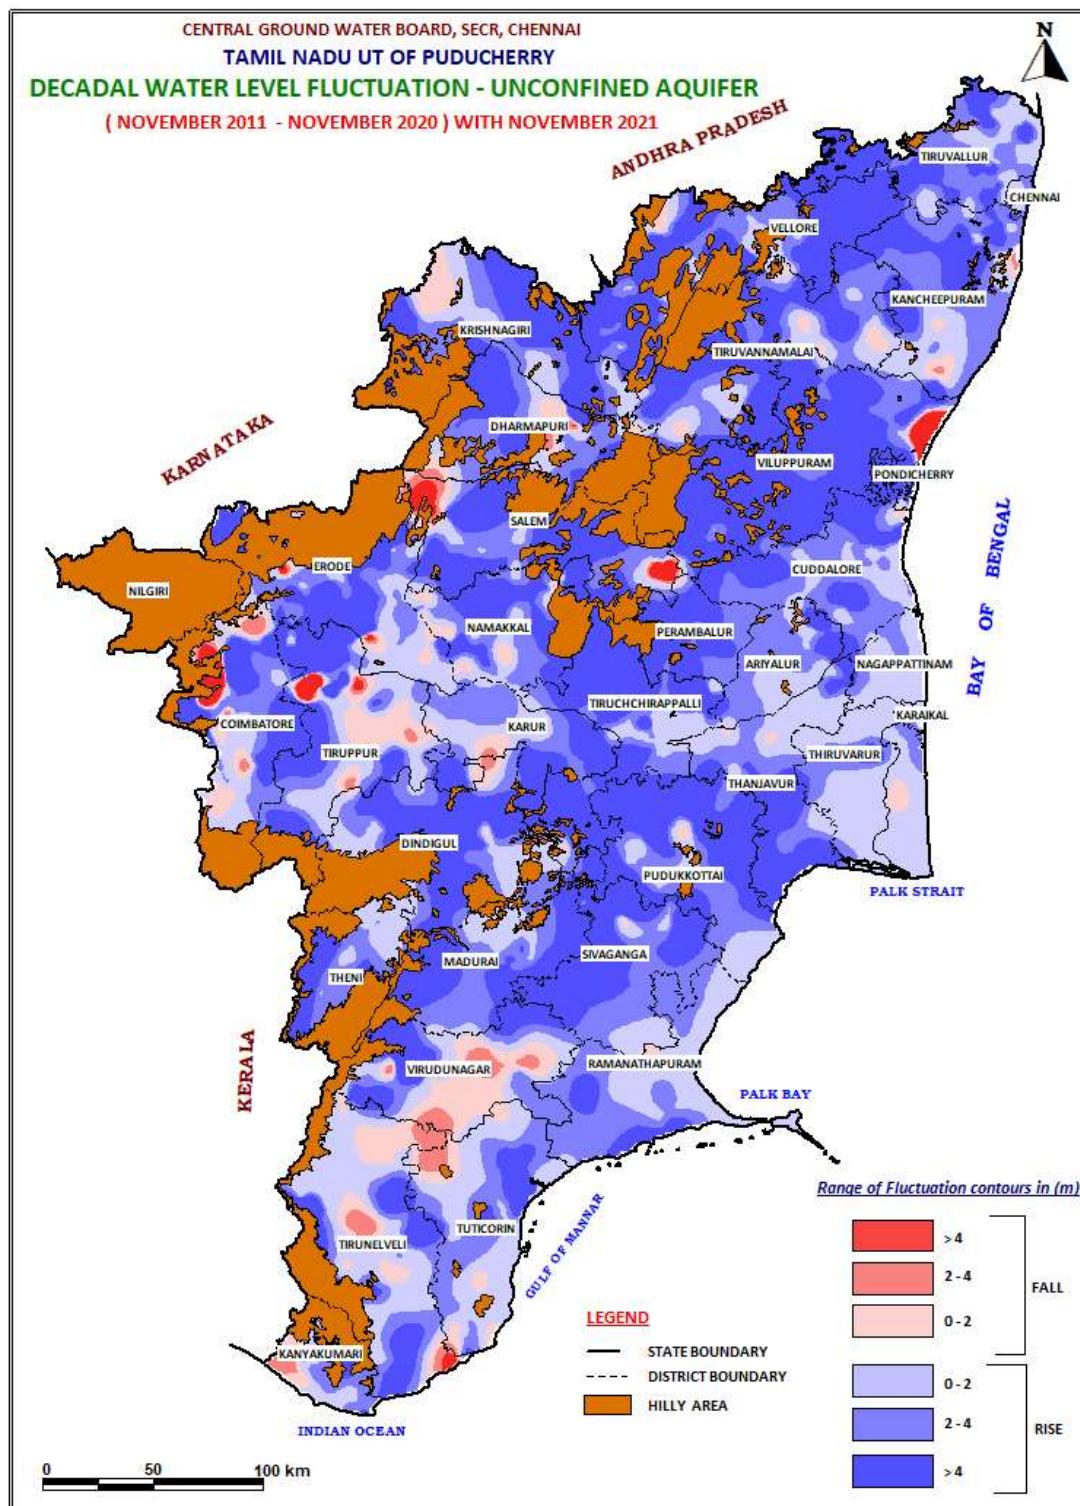

The statement showing the distribution of ground water monitoring wells falling in different ranges of fluctuation is presented in **Table-19** and **Plate-XIV**. A comparison of water level shows that a rise in the water level is recorded in 85.4% of wells analysed, while 14.6% recorded fall. Salient features of the comparison of water levels are given below. The rise is mainly in 0-2 m range and the fall is also in the same range.

1. The districts of Tamilnadu and UT of Puducherry have recorded rise in more than 70% wells.
2. Rise in the water level in the range of 0-2m has been observed in 32.3% of wells analysed, noted all over the State and U.T. of Puducherry.
3. Rise in the water level of 2 to 4 m has been observed in 26% and of wells analysed and noted all over the State mainly in Cuddalore, Erode, Kanchi, Namakkal, Salem, Trichy, vellore, and Villupuram districts.
4. Rise in the water level more then 4 m has been observed in 27.1% and of wells analysed and noted mainly in Coimbaote, Dindigul, Erode, Kancheepuram, Namakkal, Perambalur and Salem districts.
5. The fall in water level in the range of 0-2m has been observed in 10.1% of wells analysed and spread all over the State and U.T. of Puducherry.
6. The fall in water level in the range of 2-4m has been observed in 2.2% of wells analysed and noted mainly in Coimbaore and Erode, Kancheepuram, Namakkal, Tirunelveli, Tiruppur and Virudunagar districts.
7. The fall in water level more than 4 m has been observed in 2.3% of wells analysed and noted as isolated pockets mainly in Coimbatore, Erode, Salem, Theni, Virudunagar districts.

### **Confined Aquifer:**

The Piezometric surface data of November 2021 were compared with mean water level for the period November 2011-2020. The district-wise distribution of Ground water monitoring wells falling in different ranges of water level fluctuation is presented in **Table-20**. A comparison of water level shows a rise in 83.2% and a fall in 16.8% of the wells. While rise is more in >4 m range the fall is mainly in >4 m range.

1. Most of the districts have recorded rise in more than 50% wells except Ariyalur, Namakkal and Nagapattinam districts.
2. Rise in the water level in the range of 0-2m has been observed in 22.5% of wells analysed, spread all over the State, predominantly in Coimbatore, Dindigul, Erode, Kanchipuram, Madurai, Theni and Tirunelveli districts.
3. Rise in the water level in the range of 2-4 m has been observed in 17.6% of wells analysed and noted mainly Erode, Madurai and Theni district.
4. Rise in water level more than 4 m has been observed in 43.1% of wells analysed and noted in Coimbatore, Cuddalore, Erode, Madurai, Theni districts and UT of puducherry.
5. The fall in water level in the range of 0-2m has been observed in 6.1% of wells analysed and noted in Ariyalore, Erode, Namakkal and Tuticorin districts.
6. The fall in water level in the range of 2-4m has been observed in 3.4% of wells analysed and noted in Theni and Tirunelveli districts.
7. Fall in water level more than 4 m has been observed in 7.3% of wells analysed and noted mostly in Ariyalur,Cuddalore, and Namakkal districts

## **Mean Water Levels For The Period January 2012-2021 & January 2022:**

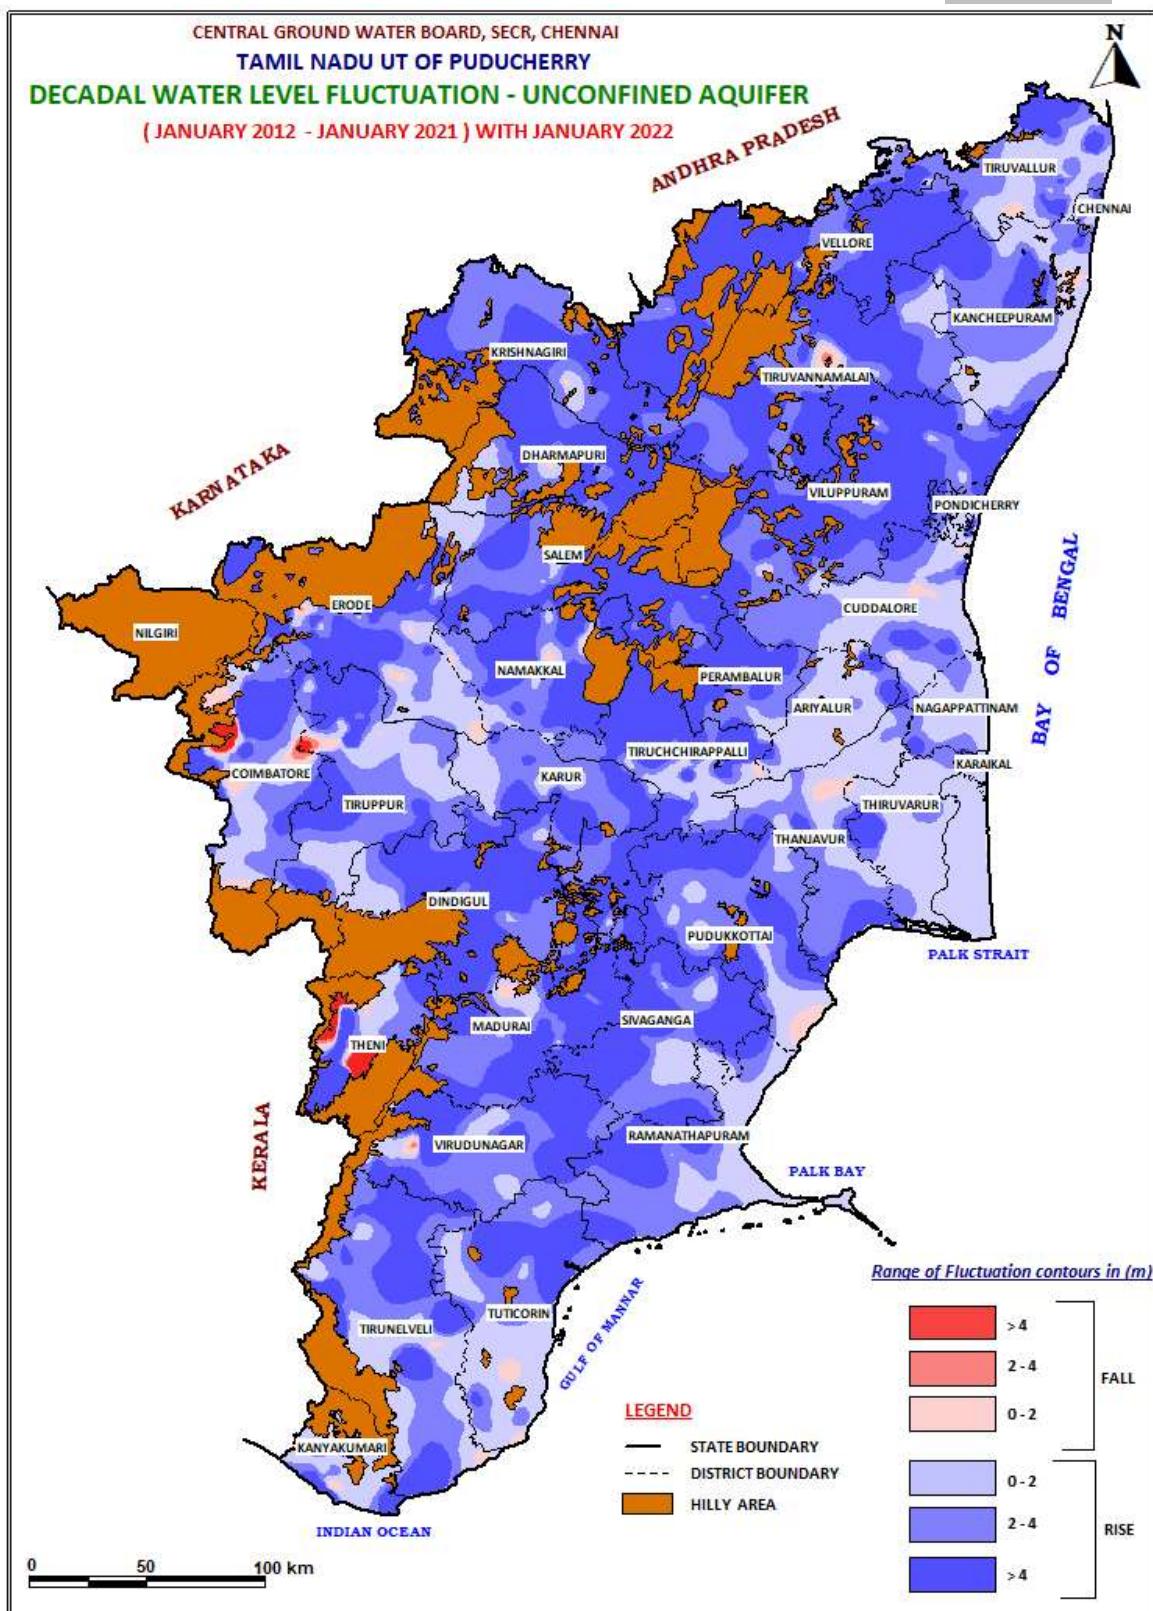

The distribution of hydrograph network stations falling in different ranges of fluctuation is presented in **Table-21** and **Plate-XV**. A comparison of water levels shows that a rise in the water level is recorded in 91.3% of wells analysed, while 8.7 % recorded fall. While rise is more in 0-2 m range the fall is also in the same range.

1. The most of the districts of Tamilnadu and UT of Puducherry have recorded rise in more than 50% wells.
2. Rise in the water level in the range of 0-2m has been observed in 35.9% of wells analysed, noted all over the State and UT of Puducherry.
3. Rise in the water level of 2 to 4 m has been observed in 26.4% and of wells analysed and noted all over the state except Ariyalur, Karaikal UT of Puducherrry.
4. Rise in the water level more then 4 m has been observed in 29% and of wells analysed and noted all over the state except Ariyalur, Nagapattinam, Nilgiri, Thanjavur, Tiruvarur district of Tamilnadu and Karaikal UT of Puducherry.
5. The fall in water level in the range of 0-2m has been observed in 6.5% of wells analysed and spread most the districts in the State and U.T. of Puducherry.
6. The fall in water level in the range of 2-4m has been observed in 1.5% of wells analysed and noted mainly Erode, Kanchipuram and Tiruvallur districts.
7. The fall in water level more than 4 m has been observed in 0.8% of wells analysed and noted as isolated pockets mainly in Coimbatore, and Theni districts.

PLATE-XV

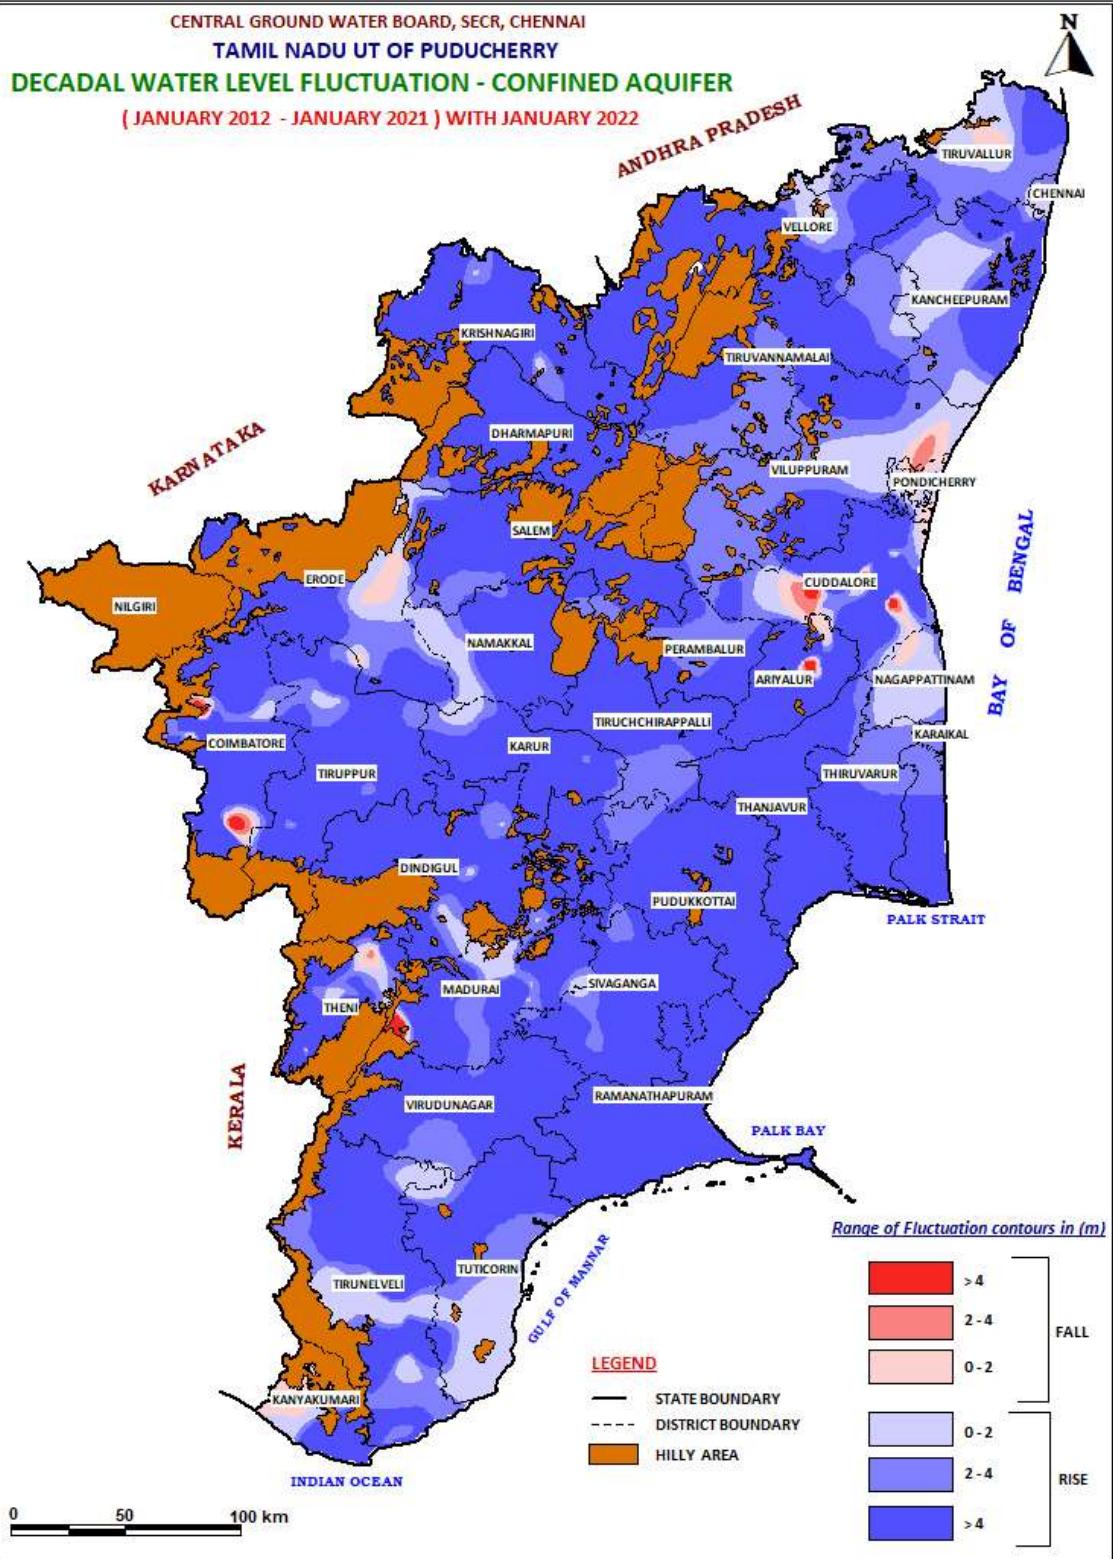

### **Confined Aquifer:**

The Piezometric surface data of January2022 were compared with mean water level for the period January 2012-2021. The district-wise distribution of Ground water monitoring wells rising and falling in different ranges of water level fluctuation is presented in **Table-22**. A comparison of water level shows a rise in 84.8% and a fall in 15.2% of the wells. While rise is more in >4 m range the fall is mainly in >4 m range.

1. The entire state have recorded rise in more than 50% wells, Nagapattinam, and Puducherry region of UT of Puducherry
2. Rise in the water level in the range of 0-2m has been observed in 20.6% of wells analysed, spread all over the State, predominantly in Coimbatore, Cuddalore, Dindigul, Kanchipuram Madurai and Tirunelveli districts.
3. Rise in the water level in the range of 2-4 m has been observed in 18.1 % of wells analysed and noted mainly in Coimbatore, Erode, Madurai and Theni districts.
4. Rise in water level more than 4 m has been observed in 46.2% of wells analysed and noted in Coimbatore, Cuddalore, Erode, Madurai, Salem, Theni districts.
5. The fall in water level in the range of 0-2m has been observed in 5.4% of wells analysed and noted in Ariyalur, Cuddalore, Nagapattinam districts and UT of Puducherry.
6. The fall in water level in the range of 2-4m has been observed in 1.4% of wells analysed and noted mainly in Ariyalur, Cuddalore Theni and Villupuram districts.
7. Fall in water level more than 4 m has been observed in 8.3% of wells analysed and noted mostly Ariyalur, Cuddalore and Puducherry region of UT of Puducherry.

## **Annual Fluctuation**

Annual fluctuation of water level is calculated by comparing the water level of the particular period during last year with water level of the same period of current year. This indicates the impact of ground water development and ground water recharge during one year. Positive fluctuation indicates improved recharge over and above ground water development and negative fluctuation indicates increased ground water development over and above the recharge.

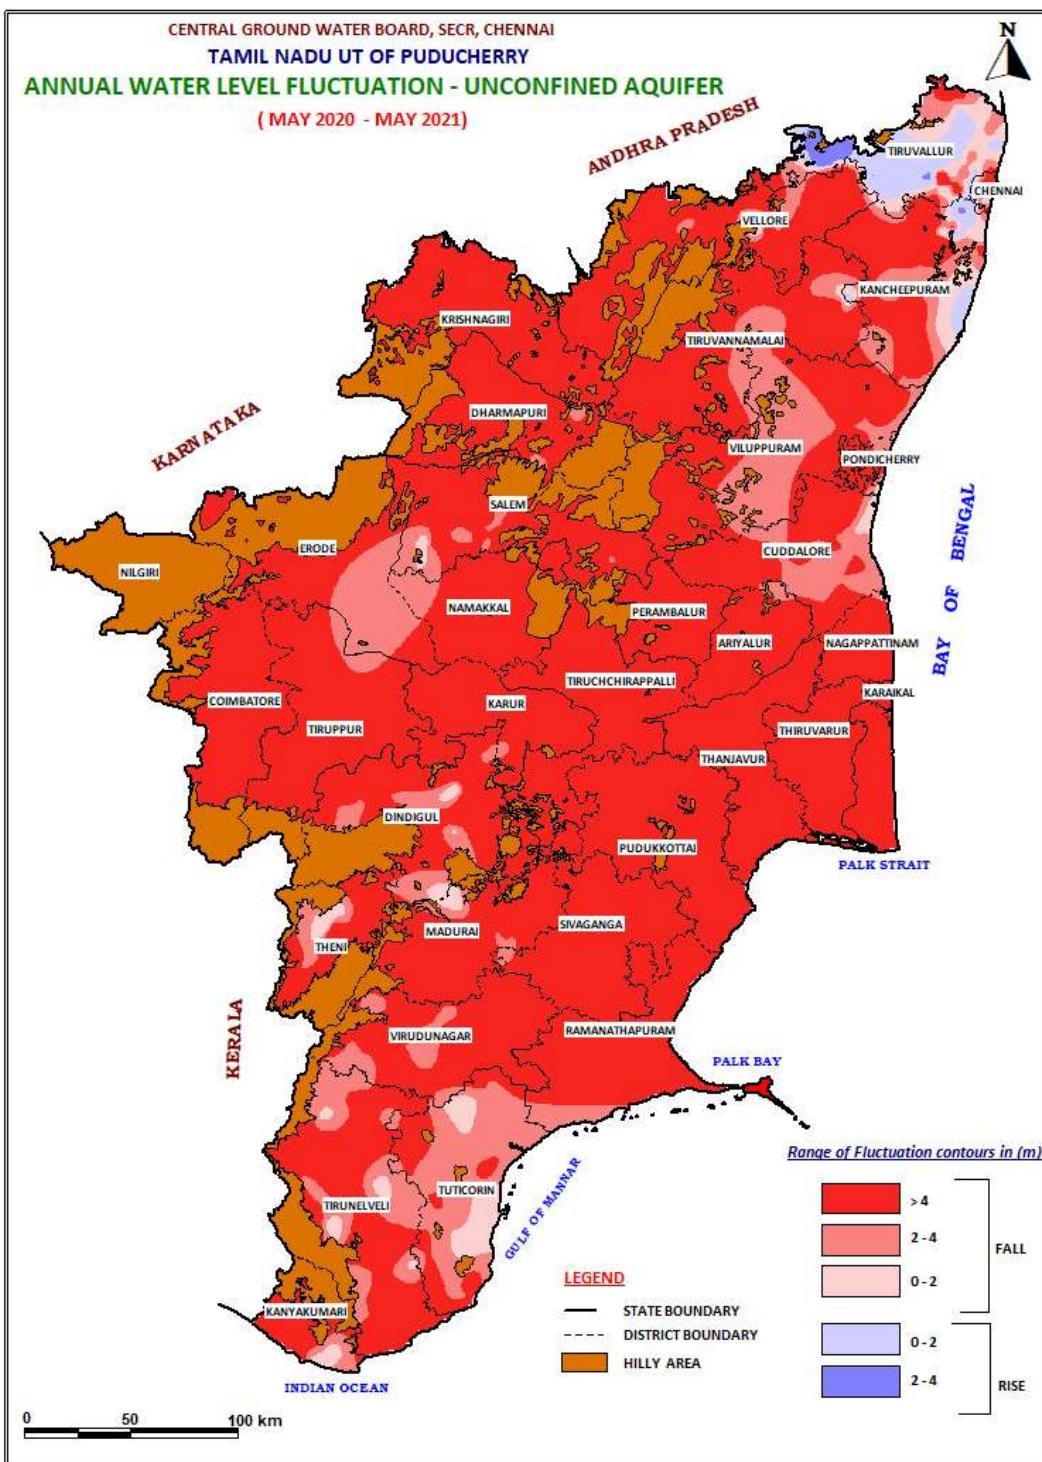

### **Water Levels for the Period May 2020 & May 2021:**

The district-wise distribution of Ground water monitoring wells falling in different ranges of water level fluctuation is presented in **Table-24** and **Plate-XVI**

1. 11.9 % of the wells have recorded rise in water level while comparing the May 2021 water level with the same period of 2020. The decline of  $> 4$  m is in 55.4% of wells. Next the decline  $< 2$  is dominant with 8.2%. Decline of 2-4 m is observed in 24.5 % of wells. The rise is predominantly in  $< 2$  m with 9.4%. Rise of 2-4m is observed in 1.9%. The rise of  $> 4$  m is in 0.5% of wells analysed. All districts of Tamil Nadu have experienced fall in more than 50% of the wells.
2. 75% of the wells of Pondicherry district of UT of Puducherry have recorded water level  $> 10$  mbgl. While 25 % of the wells have recorded 5-10 m range, 40% of the wells have recorded 20-40 m range. 35 % of the wells have recorded 10-20 m range.
3. 100% of the wells of Pondicherry district of UT of Puducherry have recorded fall in the water levels while comparing with the May 2020 water level with May 2021. Fall is mostly in  $> 4$  m range with 60%. 20% of the wells have recorded 2-4 m rise. The fall is also more in 0-2 m range with 20% of wells.

**Table-24 : Annual Water level fluctuation - Pre monsoon May 2021 with May -20 - Unconfined**

## **Water Levels for the Period August 2020 &August 2021:**

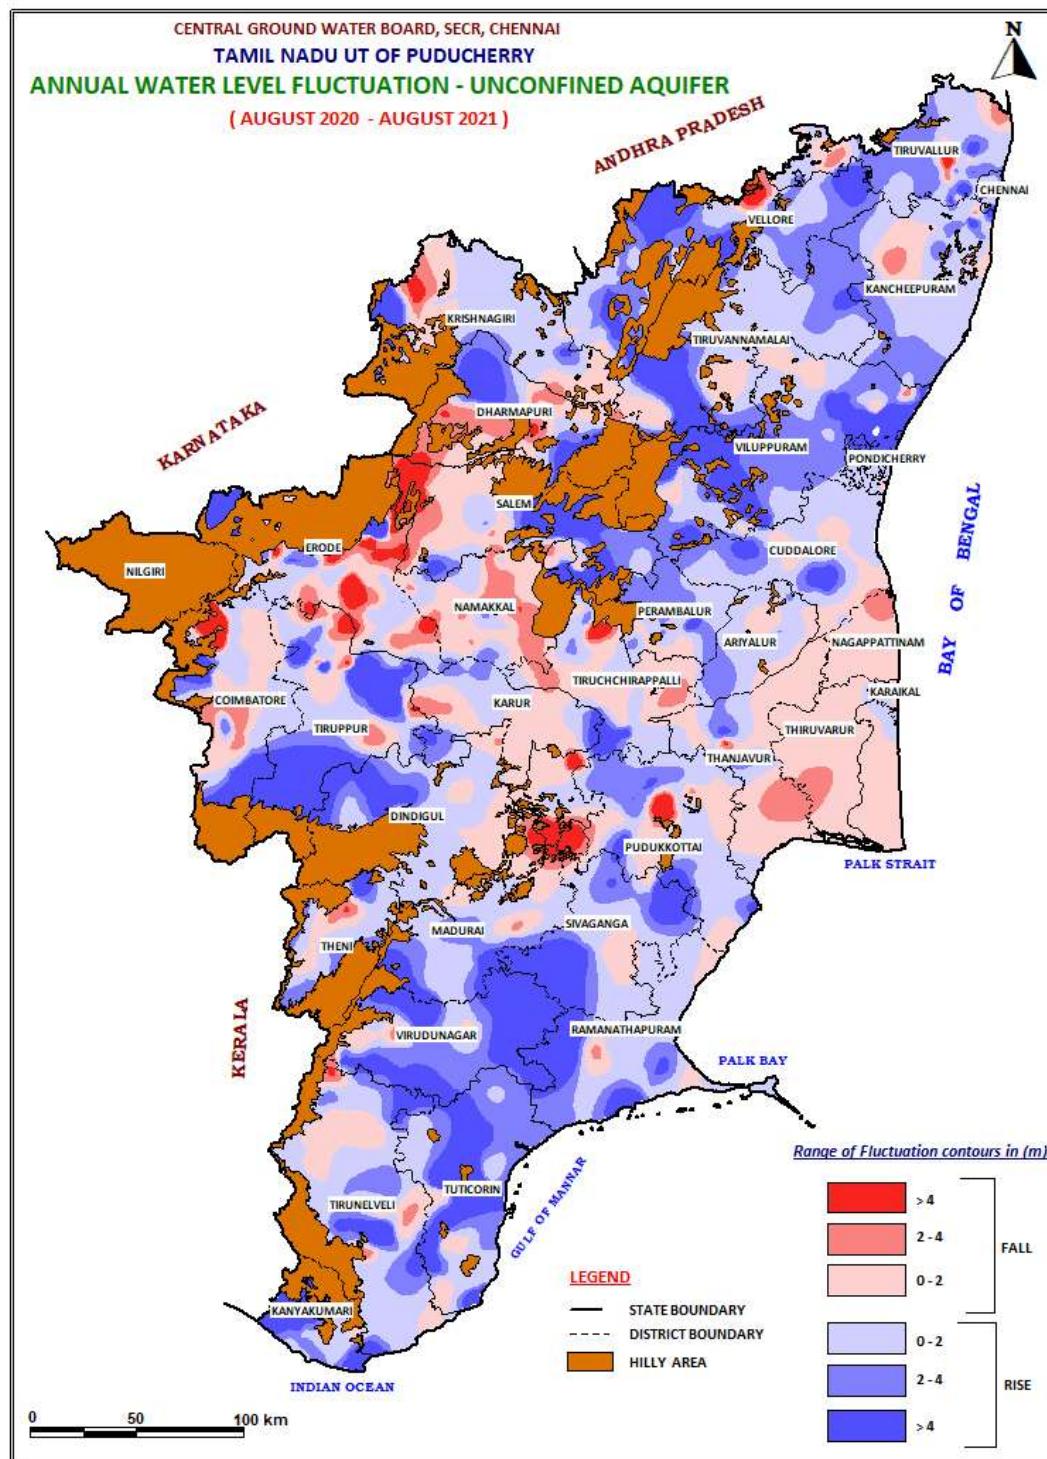

The water level data for August 2021 were compared with water level for the period August 2020. The district-wise distribution of Ground water monitoring wells falling in different ranges of water level fluctuation is presented in **Table-25** and **Plate-XVII**. A comparison of water level shows a rise in 56.7% and a fall in 43.3% of the wells. Both the rise and fall is mainly in 0-2 m range.

1. The Most of the districts of the state and UT of Puducherry have recorded rise in more than 50% wells except Coimbatore, Dharmapuri, Erode, Nagapattinam, Namakkal, Salem, Sivagangai, Thanjavur , Trichy districts and Karaikal Region UT of Puducherry.
2. Rise in the water level in the range of 0-2m has been observed in 33.3% of wells analysed, and found all over the state and Puducherry region of UT of Puducherry.
3. Rise in the water level in the range of 2-4 m has been observed in 13.6% of wells analysed and found mainly in Kanchipuram, Perambalur, Salem, Tiruvallur, Vellore and Villupuram districts.
4. Rise in water level more than 4 m has been observed in 9.8% of wells analysed and noted all over the state mainly in Tuticorin, Vellore and Villupuram districts.
5. The fall in water level in the range of 0-2m has been observed in 29.9% of wells analysed and noted all over the state as isolated patches except in Chennai.
6. The fall in water level in the range of 2-4m has been observed in 8.1% of wells analysed and noted as isolated patches mainly in Coimbatore, Erode and Namakkal districts.
7. Fall in water level more than 4 m has been observed in 5.3% of wells analysed and noted isolated patches in Erode, Salem, and Trichy districts.

### **Confined Aquifer:**

The Piezometric surface data of August 2021 were compared with that of August 2020. The district-wise distribution of Ground water monitoring wells falling in different ranges of water level fluctuation is presented in **Table-26**. A comparison of water level shows a rise in 64.1% and a fall in 35.9% of the wells. Both rise and fall is more in 0-2 m & 0-2 m range.

1. The entire state have recorded rise in more than 50% wells except Coimbatore, Dharmapuri, Erode, Karur, Nagapattinam, Namakkal, Pudukkottai and Salem Districts
2. Rise in the water level in the range of 0-2m has been observed in 25.1% of wells analysed, predominantly in Ariyalur, Coimbatore, Cuddalore, Dindigul Madurai, Theni and Tirunelveli districts.
3. Rise in the water level in the range of 2-4 m has been observed in 13.9% of wells analysed and noted mainly in Cuddalore, Madurai and Theni district.
4. Rise in water level more than 4 m has been observed in 25.9% of wells analysed and noted in Cuddalore, Madurai, Theni and Tuticorin districts.
5. The fall in water level in the range of 0-2m has been observed in 19.3 % of wells analysed and noted mainly in Ariyalur, Coimbatore, Cuddalore, Erode, Namakkal and Tirunelveli districts.
6. The fall in water level in the range of 2-4m has been observed in 7.3 % of wells analysed and noted mainly in Cuddalore and Erode districts.
7. Fall in water level more than 4 m has been observed in 9.3% of wells analysed and noted mostly in Coimbaotre, Erode and Salem Districts.

### Water Levels for the Period November 2020 & November 2021:

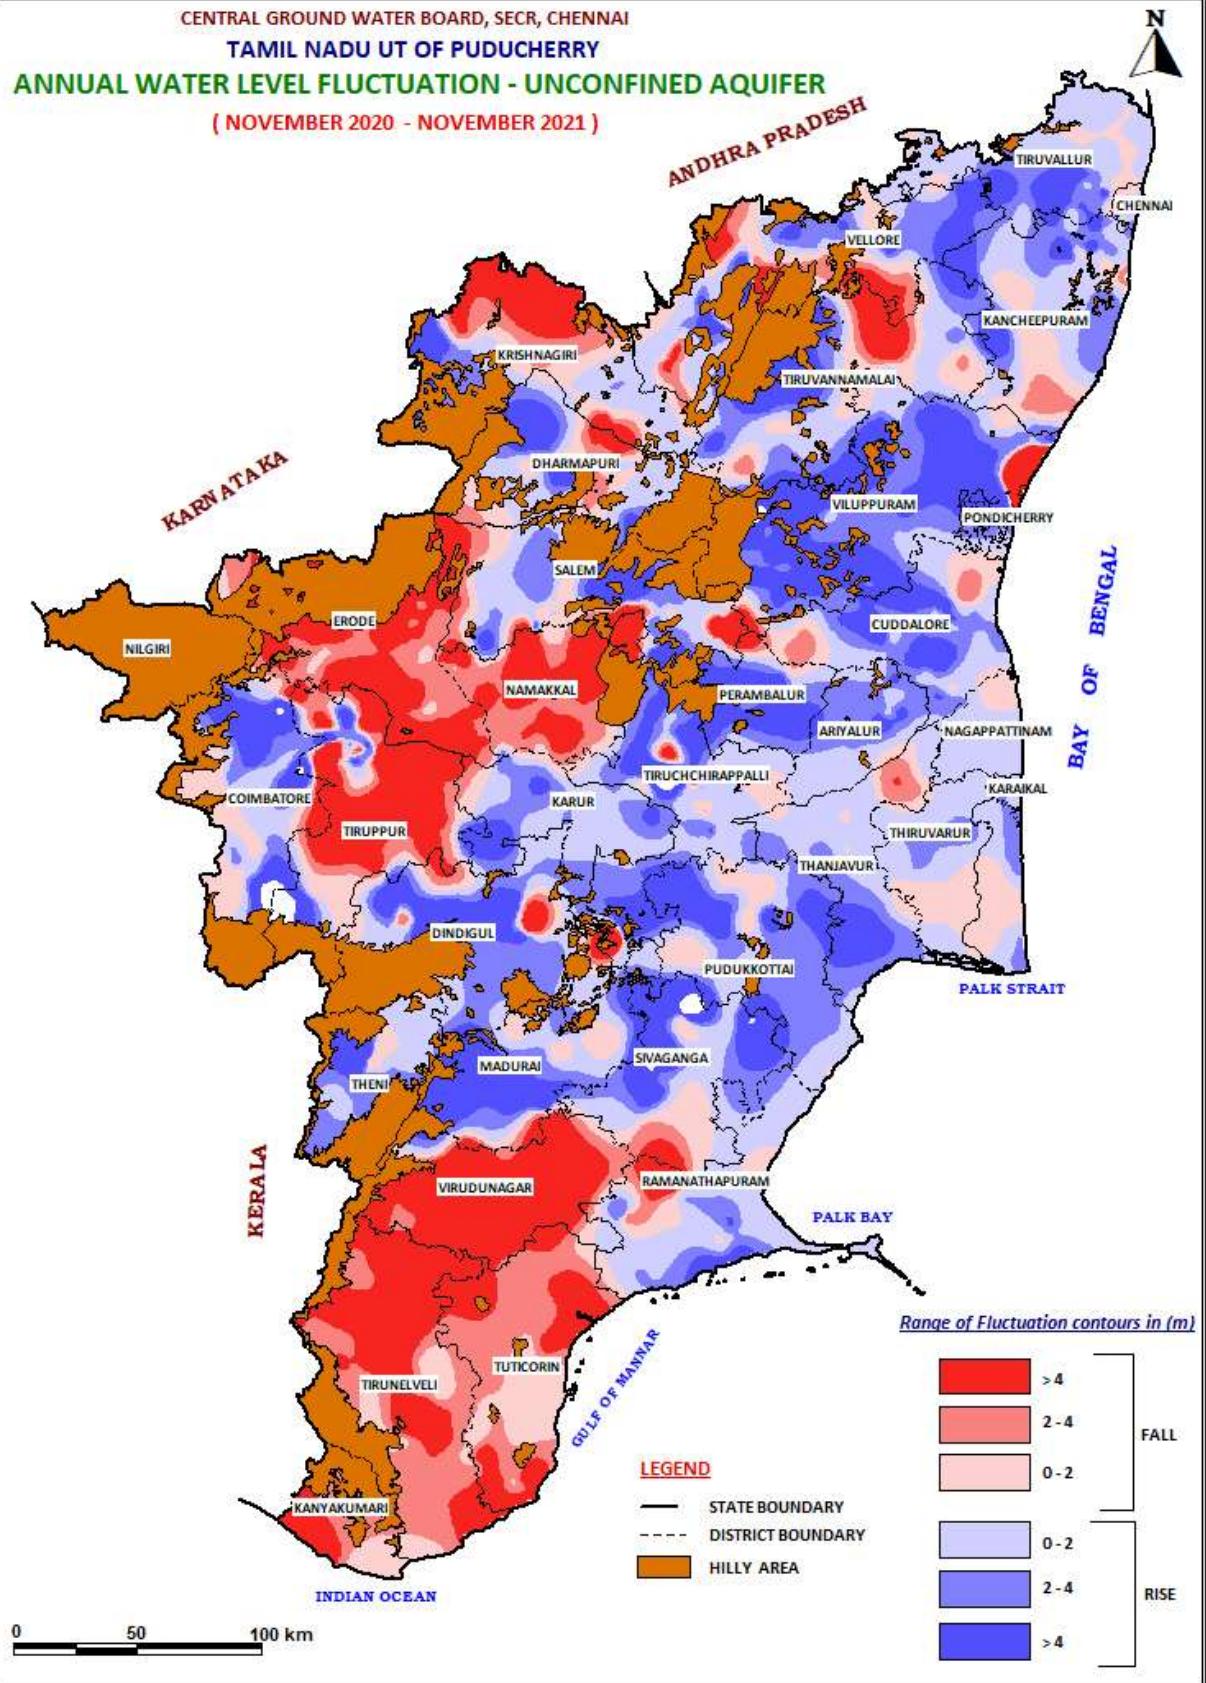

The water level data for November 2021 were compared with water level for the period November 2020. The district-wise distribution of Ground water monitoring wells falling in different ranges of water level fluctuation is presented in **Table-27** and **Plate-XVIII**. A comparison of water level shows a rise in 54.8% and a fall in 45.2% of the wells. Both the rise and fall is mainly in 0-2 m and >4 m range.

1. The Districts of the Tamilnadu state and UT of Puducherry have recorded rise in more than 50% wells in some districts, Dharmapuri, Erode, Kanyakumari, Tirunelveli, Tuticorin and Virudunagar districts of the state.
2. Rise in the water level in the range of 0-2m has been observed in 25.3% of wells analysed, and found all over the state and UT of Puducherry.
3. Rise in the water level in the range of 2-4 m has been observed in 13.6% of wells analysed and found in Coimbatore, Cuddalore, Dindigul, Kanchipuram, Pudukkottai, Trichy and Villupuram districts of the state.
4. Rise in water level more than 4 m has been observed in 16% of wells analysed and noted all over the state except in Coimbatore, Dindigul, Kancheepuram, Madurai, Perambalur, Trichy , vellore and Villupuram districts
5. The fall in water level in the range of 0-2m has been observed in 15.2% of wells analysed and noted all over the state and UT of Puducherry as isolated disconnected patches.
6. The fall in water level in the range of 2-4m has been observed in 11.2% of wells analysed and noted as isolated patches in some districts mainly in Erode, Namakkal, Tirunelveli, Tuticorin and Vellore districts.
7. Fall in water level more than 4 m has been observed in 18.8% of wells analysed and noted isolated patches in some districts particularly Erode, Namakkal, Tirunelveli, Tuticorin and Virudunagar districts.

### **Confined Aquifer:**

The Piezometric surface data of November 2021 were compared with that of November 2020. The district-wise distribution of Ground water monitoring wells falling in different ranges of water level fluctuation is presented in **Table-28**. A comparison of water level shows a rise in 56.5% and a fall in 43.5% of the wells. Both the rise and fall is mainly in >4 m range.

1. The entire state have recorded rise in more than 50% wells except Erode, Kanchipuram, Kanyakumari, Nagapattinam, Namakkal, Ramanathapuram, Tirunelveli, Tiruppur, Tuticorin and Virudunagar Districts.
2. Rise in the water level in the range of 0-2m has been observed in 14.9% of wells analysed, spread all over the State, predominantly in Coimbatore, Krishnagiri, Madurai, Salem and Theni districts.
3. Rise in the water level in the range of 2-4 m has been observed in 10.7% of wells analysed and noted mainly in Coimbatore, Madurai, Theni, Vellore districts.
4. Rise in water level more than 4 m has been observed in 30.9% of wells analysed and noted in Ariyalur, Coimbatore, Cuddalore, Madurai, Theni districts.
5. The fall in water level in the range of 0-2m has been observed in 8.8% of wells analysed and noted in Erode, Kanchipuram, Madurai and Tirunelveli districts.
6. The fall in water level in the range of 2-4m has been observed in 10.7% of wells analysed and noted in Erode, Tirunelveli and Tuticorin districts.
7. Fall in water level more than 4 m has been observed in 24% of wells analysed and noted mostly in Cuddalore, Erode, Madurai, Namakkal, Theni, Tirunelveli and Virudunagar districts.

## **Water Levels for the Period January2021 & January2022:**

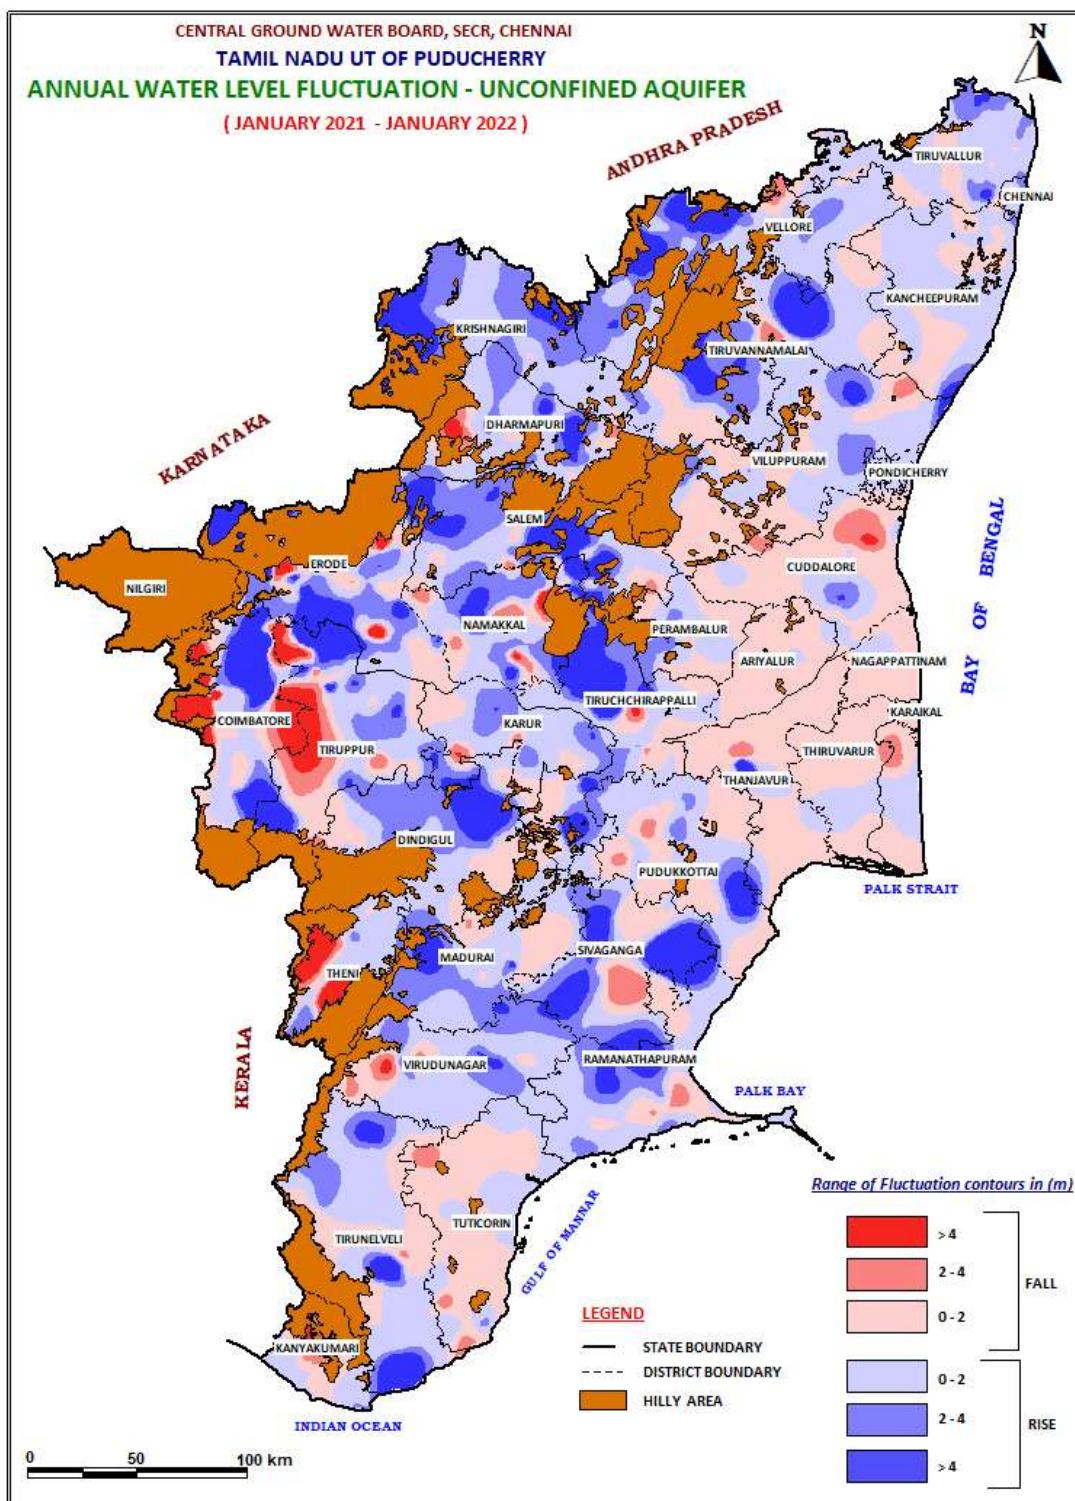

The water level data for January2022 were compared with water level for the period January 2021. The district-wise distribution of Ground water monitoring wells falling in different ranges of water level fluctuation is presented in **Table-29** and **Plate-XIX**. A comparison of water level shows a rise in 58.1% and a fall in 41.9% of the wells. Both the the rise and fall is mainly in 0-2 m range.

1. The entire state and UT of Puducherry have recorded rise in more than 50% wells except Nilgiri, Thanjavur, Tiruvarur districts of the state and UT of Puducherry.
2. Rise in the water level in the range of 0-2m has been observed in 35.8% of wells analysed, and found all over the state except Tiruvarur District and Karaikal Region UT of Puducherry.
3. Rise in the water level in the range of 2-4 m has been observed in 12% of wells analysed and found all over the state except Cuddalore , Kancheepuram , Thanjavur , Tiruvarur and Nagapattinam and UT of Puducherry.
4. Rise in water level more than 4 m has been observed in 10.3% of wells analysed and noted all over the state mainly in Coimbatore, Erode, Namakkal, Salem, Trichy districts.
5. The fall in water level in the range of 0-2m has been observed in 31.9% of wells analysed and noted all over the state as isolated disconnected patches and UT of Puducherry.
6. The fall in water level in the range of 2-4m has been observed in 5.4% of wells analysed and noted as isolated patches in some districts particularly Erode, Kanchipuram, Salem, Tirunelveli and Namakkal districts.
7. Fall in water level more than 4 m has been observed in 4.5% of wells analysed and noted isolated patches in some districts mainly in Coimbatore, Erode and Tiruppur district.

### **Confined Aquifer:**

The Piezometric surface data of January 2022 were compared with that of January 2021. The district-wise distribution of Ground water monitoring wells falling in different ranges of water level fluctuation is presented in **Table-30**. A comparison of water level shows a rise in 59.2% and a fall in 40.8% of the wells. Both the rise and fall is mainly in 0-2 m range.

1. The Most of the Districts of the state have recorded rise in more than 50% wells except few districts.
2. Rise in the water level in the range of 0-2m has been observed in 22% of wells analysed, spread all over the State, predominantly in Coimbatore, Cuddalore, Erode, Kanchipuram, Madurai, Salem and Theni districts.
3. Rise in the water level in the range of 2-4 m has been observed in 14.1% of wells analysed and noted mainly in Coimbaotre, Cuddalore, Erode, Theni and Madurai districts.
4. Rise in water level more than 4 m has been observed in 23.1% of wells analysed and noted in Coimbaotre, Cuddalore, Dindigul, Erode and Theni districts.
5. The fall in water level in the range of 0-2m has been observed in 22.7% of wells analysed and noted in Cuddalore, Kanchipuram, Madurai, Theni, tirunelveli and Tuticorin districts.
6. The fall in water level in the range of 2-4m has been observed in 5.4% of wells analysed and noted in some districts particularly in Cuddalore district.
7. Fall in water level more than 4 m has been observed in 12.6% of wells analysed and noted mostly Coimbatore, Cuddalorea nd Theni districts and UT of Puducherry.

**LONG TERM WATERLEVEL TREND  
AREA SHOWING SIGNIFICANT DECLINE (0.1 M /YR) IN WATER  
LEVEL .**

Area showing significant decline ( $> 0.1 \text{ m /yr}$ ) in water level during pre monsoon period (may 2012-may 2021) is analysed. Falling trend is recorded in 75% percent of shallow wells spreaded all over the state. 1.6% have recorded decline of  $> 0.1 \text{ m/year}$ . The location of groundwater monitoring wells showing significant decline ( $> 0.1 \text{ m/year}$ ) during the pre monsoon period is furnished in the **Table - 31**.The long term water level trend of premonsoon is presented in **Plate -XX**. Rise of  $< 0.1 \text{ m/year}$  is recorded only in two wells, one in dharmapuri and one in erode district.

The significant decline in ground water levels in dug well during post monsoon (Jan 2012 – Jan 2021) is noticed in almost entire state (64% of wells analysed) and the details of wells showing significant decline ( $> 0.1 \text{ m/year}$ ) found in 1.86% of wells. The location of groundwater monitoring wells showing significant decline ( $> 0.1 \text{ m/year}$ ) during the post-monsoon period is furnished in the **Table - 32**. The long term water level trend of premonsoon is presented in **Plate -XXI**. Rise of  $< 0.1 \text{ m/year}$  is recorded in 1% also recorded as scattered patches spreaded in all the districts.

**PLATE -XX.**

#### **IV. HYDROCHEMISTRY**

The quality of shallow ground water in the state of Tamil Nadu has been evaluated by sampling and analysis of water sample collected from Ground Water Monitoring wells. About 620 Ground Water Monitoring wells were monitored for water quality during May 2021 representing pre-monsoon water quality. The district wise chemical analysis data of the samples are given in the Annexure-II. The summarized results of ground water quality ranges are given in Table 33.

**Table33: Ground water quality of SECR, during May-2021**

S. No	Parameters		Range	No. of sample	Percentage
1	Electrical Conductivity $\mu\text{s}/\text{cm}$ at $25^\circ\text{C}$	Fresh	< 750	115	18.5
		Moderate	751- 2250	331	53.4
		Slightly mineralized	2251- 3000	96	15.5
		Highly mineralized	> 3000	78	12.6
2	Chloride mg/l	Desirable limit	< 250	370	59.7
		Permissible limit	251-1000	223	36.0
		Beyond permissible limit	> 1000	27	4.3
3	Fluoride mg/l	Desirable limit	< 1.0	446	72.0
		Permissible limit	1.1- 1.5	123	20.0
		Beyond permissible limit	>1.5	51	8.0
4	Nitrate mg/l	Permissible limit	<45	382	61.6
		Beyond permissible limit	> 45	238	38.4

In general, the ground water quality in the state is fresh in about 18.5 % of the Ground Water Monitoring wells as indicated by the EC value less than  $750 \mu\text{s}/\text{cm}$  at  $25^\circ\text{C}$ . In about 53.4 % of the Ground Water Monitoring wells, the EC varies between  $751 - 2250 \mu\text{s}/\text{cm}$  at  $25^\circ\text{C}$  and 15.5 % of Ground Water Monitoring wells are between  $2251-3000 \mu\text{s}/\text{cm}$  at  $25^\circ\text{C}$  indicating that the ground water is slightly mineralized and about 12.6 % of Ground Water Monitoring wells the EC is more than  $3000 \mu\text{s}/\text{cm}$  at  $25^\circ\text{C}$  indicating that the ground water is highly mineralized. The highest value  $19600 \mu\text{s}/\text{cm}$  at  $25^\circ\text{C}$  was observed in Nenmeni, Virudhunagar district. The details of well showing EC more than  $3000 \mu\text{s}/\text{cm}$  at  $25^\circ\text{C}$  is given in Table:34.-

**Table:34 Details of well shows Electrical conductivity more than 3000  $\mu\text{s}/\text{cm}$  at 25° C during May 2021**

## V. CONCLUSIONS

The behaviour of ground water table during August 2020 to January 2021 in Tamil Nadu State and Puducherry and Karaikal regions of U.T of Puducherry has been studied by monitoring the dug wells tapping phreatic aquifers. The data on water levels was analysed in detail and salient features are as under.

1. The depth to water level recorded during Premonsoon (May 2021) varied from 0.05 to 21.28 m bgl. 90% of wells have recorded depth to water level within 10 m bgl during premonsoon period (May 2021), whereas during post-monsoon period (January 2022), about 95% of wells recorded water levels less than 10 m bgl. The depth to water level recorded during Postmonsoon (January 2022) varied from 0.02 to 55.65 m bgl.
2. The piezometric surface ranged from 0.5 m to 109.5 m bgl. 58.34% of wells have recorded depth to piezometric surface within 10 mbgl during premonsoon period (May 2021), whereas during post-monsoon period (January 2022), the piezometric surface ranged

from 0.23 m to 88.11 m bgl. 72.5% of wells have recorded depth to piezometric surface within 10 mbgl.

3. 84.8% of wells have recorded depth to water level within 10m bgl during August 2021 and 93.5% during November 2021. 60.1% of Piezometers have recorded Piezometric surface in the range of <10 m bgl during August 2021 whereas during November 2021, about 69.7% of piezometers have recorded in < 10 m bgl range.
4. 19.1% of wells have recorded fall in water levels and 80.8% of wells recorded rise in water levels during May 2021 in comparision to decadal mean.76% of Piezometers have recorded rise and 24% piezometers have recorded fall during that period.
5. 91.3% of wells have recorded rise in water levels and 8.7% of wells have recorded fall during January 2022 with respect to respective decadal means.84.8% of Piezometers have recorded rise and 15.2% piezometers have recorded fall during that period.
6. When compared the water level during the premonsoon (May) of 2021 with the premonsoon of (May 2020), rise was recorded in 11.9% and fall in 88.1%.
7. When compared the water level during the Post monsoon (January) of 2022 with the Post monsoon (January) of 2021, rise was recorded in 58.1% and fall in 41.9%. 59.2% of piezometers have recorded rise and 40.8 % of piezometers have recorded fall.
8. When the long term trend of water levels were analysed for the period of Premonsoon (May 2010-2019) falling trend is observed in 73% of wells and rising trend is observed in 27% of wells. When the same exercise for Post monsoon (January 2011-2020) was done, rising trend is observed in 36% and falling trend in 64%.
9. In general, the ground water quality in the state is fresh in about 18.5 % of the Ground Water Monitoring wells as indicated by the EC value less than 750 ms/cm at 25oC. In about 53.4 % of the Ground Water Monitoring wells, the EC varies between 751 -2250ms/cm at 25o C and 15.5 % of Ground Water Monitoring wells are between 2251-3000 ms/cm at 25o C indicating that the ground water is slightly mineralized and about 12.6 % of Ground Water Monitoring wells the EC is more than 3000 ms/cm at 25oC indicating that the ground water is highly mineralized. The highest value 19600 ms/cm at 25o C was observed in Nenmeni, Virudhunagar district.
10. The chloride content is less than 250 mg/l in about 59.7 % of the sample analyzed and 36.0 % of the sample are between 251 – 1000 mg/l and 4.3 % shows more than 1000mg/l which are from the districts of Cuddalore ,Dharmapuri, Dindigul, Salem, Theni,Thiruvannamalai, Tirunelveli, Titicorin, Vellore and Viridhunagar.

11. The Fluoride content is less than 1.5 mg/l in about 92 % of the sample analyzed and about 8% of the sample shows more than 1.5 mg/l, which are from the districts of Cuddalore ,Dharmapuri, Kancheepuram, Krishnagiri , Madurai, Salem, Theni,Thiruvannamalai, Tirunelveli, Titicorin, Vellore and Viridhunagar.
12. The Nitrate content is less than 45mg/l in about 61.6% of the sample analyzed and and 38.4 % of sample shows more than 45 mg/l which are from the district of Cuddalore Dharmapuri, Di ndigul, Kancheepuram, Kanyakumari, Krishnagiri , Madurai, Salem, Theni,Thiruvannamalai, Tirunelveli, Thiruvallur, Titicorin, Vellore and Viridhunagar

## **ACKNOWLEDGEMENTS**

The authors express their gratitude to Dr.A.Ashokan, Regional Director, Central Ground Water Board, South Eastern Coastal Region, Chennai, for his constant encouragement throughout the task of compilation and analysis of voluminous data. They express their gratitude to him for the keen interest evinced by him in the report as also for the suggestions offered by him vis-à-vis some aspects for improving their lucidity, which have enhanced not only the form but also the contents of the final report. The authors also profusely thank the hard and arduous work put in by various field officers who diligently collected data and water samples from the field, which forms the base for this report. The authors profoundly thank the huge contribution made by the Officers and staff of the Water Quality Laboratory who have analysed the large number of water samples and interpreted the anlysis results thereof. The authors would be failing in their dury if they do not acknowledge the unstinting cooperation offered by their various colleagues who have contributed in a major way in bringing out this report.

**Annexure-II**

**Depth to Water level of Semi Confined and Confined wells of Tamilnadu State and U.T. of Puducherry (May 21 - January 2022)**
