EXECUTIVE SUMMARY

Central Ground Water Board, an apex Organization under Ministry of Jal Shakthi, Government of India, is carrying out the monitoring of ground water levels all over the country for generating a sound database so that the changes in ground water regime could be scientifically studied, analysed and strategies for its optimal utilization can be planned.

The behaviour of ground water table during the ground water year 2019-2020 in the state of Tamil Nadu and Puducherry and Karaikal regions of the Union Territory of Puducherry has been studied by monitoring a set of dug wells and purpose-built piezometers during the months of May 2019, August 2019, November 2019 and January 2020. As of January 2020, Central Ground Water Board, South Eastern Coastal Region, monitors 828 dug wells and 485 tube wells/piezometers to study the ground water scenario of the state of Tamil Nadu and Puducherry and Karaikal regions of the Union Territory of Puducherry.

The present compilation relates to the year 2019-2020. It provides information pertaining to water levels and also chemical quality of the phreatic aquifer. Thematic maps depicting the ground water scenario along with geochemical quality are furnished and discussed in this report. In addition, the fluctuations in water level and piezometric surface between different time frames have been analysed and presented. Various thematic maps presented reflect the effect of rainfall received during the period of study and the long-term behaviour of water level according to ground water recharge and draft conditions obtained in various agro-climatic zones. The data on seasonal rainfall during the year are furnished to correlate the effect of the rainfall on water levels.

In general, the water levels are deep in the month of May and a rising trend of water levels during January (Post-monsoon period) was observed. Water level fluctuation takes place during August, November and January depending on the monsoon rainfall and level of groundwater development.

Depth to water level over major part of the State (71% of the wells), particularly in the central and Eastern parts are < 10m bgl. Where as the central and North western parts have recorded water levels of > 10 m bgl. Water levels < 2 m is observed in 5% of wells. Depth to water level in the range of 10 to 20 m bgl has been observed in 24 % of wells analysed and found in more than 50% of wells of Dharmapuri and Perambalur districts.

During postmonsoon period, Over all 85% of the wells monitored in the state and UT are in < 10 m bgl range and spreaded over entire Tamil Nadu. 2 % of the wells have recorded water level of >20 m and are scattered particularly in Coimbatore and Erode and Madurai districts. Depth to water level in the range of <2 m bgl has been recorded in 19 % of wells analysed and found scattered in all the districts. More than 20 % of wells of Dharmapuri, Erode, Namakkal, Salem, Sivaganga, Trichy and Vellore districts have recorded water level in 10 – 20 m bgl range.

Results of chemical analysis of water samples collected during May 2018 are also discussed for understanding the spatial variation of EC, Chloride, Fluoride and Nitrate concentration in the phreatic aquifer system of the state of Tamil Nadu and Puducherry and Karaikal regions of the Union Territory of Puducherry.

**GROUNDWATER YEARBOOK OF THE STATE OF TAMIL NADU AND
PUDUCHERRY AND KARAIKAL REGIONS OF THE UNION TERRITORY OF
PUDUCHERRY
(2019-2020)**

I. Introduction

The state of Tamil Nadu has a geographical area of 1,30,058 sq. km. and is situated between N. Latitudes 08°00" and 13°30' and E. Longitudes 76°15' and 80°18'. The state is bounded by the Bay of Bengal in the east, the Indian Ocean in the south, the state of Kerala in the west and the states of Karnataka and Andhra Pradesh in the north. For administrative purposes, the state is divided into 32 districts and 1166 developmental Firkas. A major part of the Union Territory of Puducherry comprising Puducherry and Karaikal regions occurs as small enclaves in Tamil Nadu.

The Central Ground Water Board, South Eastern Coastal Region is monitoring the water levels in ground water monitoring wells in the state of Tamil Nadu and Puducherry and Karaikal regions of the Union Territory of Puducherry four times a year, viz. May (between 20th and 31st), August (between 20th and 31st), November (between 1st and 10th) and January (between 1st and 10th). Water samples from the Ground Water Monitoring Wells are collected once in a year i.e. during May. **Table-1** gives the number of Ground Water Monitoring Wells tapping the phreatic aquifers and the piezometers/tube wells/bore wells tapping the deeper semi-confined to confined aquifer during the monitoring months. The behaviour of water levels are analysed with reference to the rainfall pattern. The data are utilised for the assessment of ground water resources, evaluation of the present status of ground water development and also for planning future development. For analytical purposes, only the data of the Ground Water Monitoring Wells tapping phreatic aquifers are considered. The data thus collected are analysed and interpreted and the Ground Water Yearbook is issued annually with interpreted data and thematic maps depicting the ground water scenario.

The present report discusses the regional behaviour of water levels in both shallow and deeper aquifers for the period between May 2019 and January 2020, which will enable the user agencies to plan developmental strategies. The results of the chemical analysis of water samples collected from Ground Water Monitoring Wells during May 2019 are also discussed.

The status of district-wise break-up of Ground Water Monitoring Wells is given in **Table 2** and their locations are shown in **Figure 1**. The district-wise depth to water level data of the dugwells and depth to piezometric surface of piezometers for the measurements during May 2019, August 2019, November 2019 and January 2020 are given as **Annexures I & II**.

Background information on physiography and drainage, rainfall, hydrogeological conditions, ground water resources development of the state are also furnished in brief for better understanding of the behaviour of water table.

PHYSIOGRAPHY

The state of Tamil Nadu is divided into four physiographic units viz. (i) Coastal Plains, (ii) Eastern Ghats, (iii) Central Plateau and (iv) Western Ghats. The coastal plains stretch over a distance of about 998 km. from Pulicat Lake to Cape Comorin, ranging in elevation between 2 and 30 m above mean sea level. The coastal plains are further sub-divided into (a) the Coromandel Coast comprising parts of the districts of Tiruvallur, Kancheepuram and Cuddalore, (b) the alluvial plain of Cauvery delta extending over Nagappattinam, Thanjavur Thiruvarur districts and (c) the dry southern plains comprising parts of Pudukkottai, Ramanathapuram, Tuticorin, Tirunelveli and Kanyakumari districts.

The chain of flat-topped hills of Javadis, the Shevroy, the Kalrayan and the Pachamalai hills, which are joining Cardamom hills in the south, form the Eastern Ghats. These hills rise steeply

above plateau level to 1160 m above mean sea level in the Javadi hills and to 1645 m above mean sea level in the Shevroy hills.

Between the Eastern and Western Ghats lies the plateau area known as the "Central Plateau" comprising the districts of Erode and Coimbatore with elevations between 150 and 610 m above mean sea level thereby giving rise to an undulating topography. West of the region lies the broad Palghat gap between the Nilgiri and Anaimalai Hills. Between Cauvery River and the Palghat gap lies an extensive low plateau rising gradually from 120 to 180 m above mean sea level, along the tributaries of the Cauvery River, to 365 to 455 m above mean sea level in the west.

The plateau is fringed on the west by a group of high hills known as the Western Ghats, comprising the western part of the Nilgiri, Madurai and Kanyakumari districts. On the other side of the Palghat gap, the high mountains of the Peninsula dominate. These are the Nilgiri in the north, Anaimalai Hills, Palani and Cardamom hills in the south, with a summit level of 1830 to 2440 m above mean sea level rising sharply from the plateau.

DRAINAGE

The state of Tamil Nadu is drained by several major and minor rivers. All the major rivers originate in the Western Ghats and flow eastwards. The Palar, Ponnaiyar, Cheyyar, Kortallaiyar and Araniyar are the important rivers in the north, which are ephemeral and cutting across the centre of the state is the river Cauvery. The Cauvery delta consists of a gently sloping alluvial plain covering an area of 11,600 sq. km. and amongst its tributaries the Bhavani and Amaravathi form the most important sources of canal irrigation in the state. Bhavani, Noyil and Amaravathi rivers originate in the hill ranges of Nilgiri and Anaimalais and flow through matured valleys across the plateau.

The important rivers flowing in the southern part of Tamil Nadu are (i) Vellar (ii) Vaigai (iii) Vaippar and (iv) Tambaraparani. Of these, Tambaraparani River is only perennial, forming a good source of canal irrigation. There are several other minor and less important rivers in the state. Besides these, there are a number of smaller rivers such as the Aliyar, Sholaiyar, Parambikulam Ar, etc. flowing westwards. Except the perennial rivers, all the rivers remain dry for a good number of months in a year and are not suitable for development of power and major irrigation works. The Pulicat Lake and Kaliveli tank are the important lagoons.

The rivers of the state flow in broad and shallow valleys graded almost to their heads with only slight interruptions of profiles when they pass through the Eastern Ghats. The Western Ghats form the main watershed of the state having numerous waterfalls and Courtallam Falls (91.5 m) is one of the important waterfalls of the state.

DISTRIBUTION OF RAINFALL DURING GROUND WATER YEAR 2019-2020

Rainfall data corresponding to the measurement of water level has been downloaded from the website of India Meteorological Department. As per IMD's classification of monsoon performance over a meteorological subdivision, if the amount of rainfall received over a region (expressed as PDN) is between -19% and +19%, the monsoon performance is termed as *normal*. If the PDN is between -20% and -59%, the region comes under *deficient* category, if PDN is less than or equal to -60%, the region falls under *scanty* category, PDN of +20% to +59% indicates *excess* rainfall category and if the PDN is greater than or equal to +60%, it is termed as *large excess*.

South West Monsoon (01st June to 30th Sep)

During SWM 2019 Tamilnadu and Pndicherry and Karaikal received *normal* rainfall. The cumulative seasonal (01st June to 30th Sep) rainfall figures for the state and UT of Puducherry is given below (**Table 3**):

Table 3: Seasonal sub divisional rainfall distribution the SWM season, 2019 (01st June-30 Sep 2019)

SUB-DIVISION	Actual rainfall (mm)	Normal rainfall (mm)	Percentage departure from normal (%)
TAMILNADU, PDC and KKL (TN)	396.7	342.0	16%

Monthly subdivisional rainfall

The monthly sub divisional rainfall scenario is presented in **Table 4**. during the SWM 2019, in July Tamil Nadu and Puducherry continued to be *deficient*.

Table 4: Monthly sub divisional rainfall performance during SWM 2019

Sub-division	June			July			Aug			Sep		
	ACL (mm)	NOR (mm)	PDN (%)	ACL (mm)	NOR (mm)	PDN (%)	ACL (mm)	NOR (mm)	PD N (%)	ACL (mm)	NOR (mm)	PDN (%)
TN	33.3	54.1	-39	59.6	76.0	-22	127.1	93.7	36	176.7	118.2	50

<i>Largely Deficient</i>	<i>Deficient</i>	<i>Normal</i>	<i>Excess</i>	<i>Large Excess</i>
-60%	-20% to -59%	-19% to +19%	+20% to +59%	+60%

District-wise seasonal rainfall distribution

Figure 2 presents the district rainfall distribution as percentage departures from normal over the Tamilnadu and UT of Puducherry during the period Jun-Sep 2019.

DISTRICT RAINFALL DEPARTURE MAP - TAMIL NADU

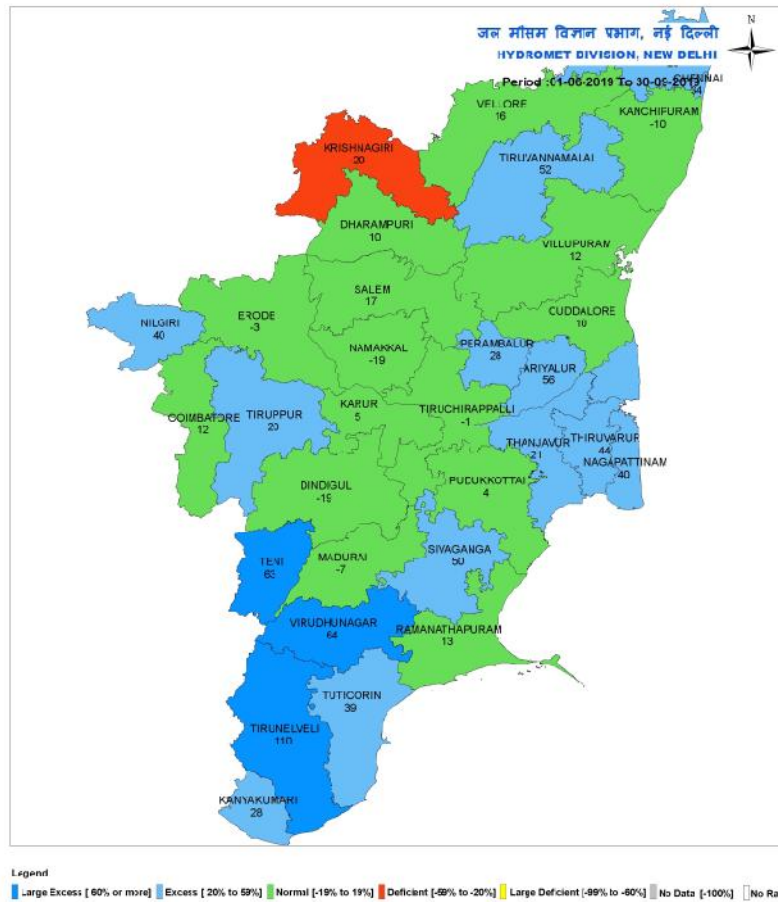

Figure 2: District wise rainfall distribution as percentage departures from normal over the Tamilnadu and UT of Puducherry

Tamil Nadu with 32 districts had 401.6 mm rain, 17% above average rainfall. Two districts (Teni (351.5 mm, 63% above normal) and Virudhunagar (310.6 mm, 64% above normal)) were in Large Excess category and one district (Krishnagiri, 301.5 mm rain, 20% below normal) was in Deficit category. The lowest rainfall district in the state, Tuticorin, with just 89.8 mm rainfall, had in fact 39% above normal rainfall. The highest rainfall district of the state this year, Nilgiri, had 1221.3 mm, 40% above normal. In the seasonal scale TN reported 59 days of heavy rainfall occurrences with 19 days of isolated very heavy rainfall and 6 days of isolated extremely heavy rainfall during the season. (Table 5,6,7,8)

Table-8: Terminologies for description of intensity of rainfall

S No.	Terminology	Rainfall range In mm	Rainfall range In cm	Percentile
1	Very light rainfall	Trace -2.4		
2	Light rainfall	2.5-15.5	Upto 1	Upto 65
3	Moderate rainfall	15.6-64.4	02-06	65-95
4	Heavy Rainfall	64.5- 115.5	07-11	95-99
5	Very Heavy Rainfall	115.6-204.4	12-20	99.0-99.9
6	Extremely heavy rainfall	Greater or equal to 204.5 mm	21 cm or more	>99.9
7	Exceptionally Heavy Rainfall	When the amount is a value near about the highest recorded rainfall at or near the station for the month or season. However, this term will be used only when the actual rainfall amount exceeds 12 cm.		

North East Monsoon 2019

The northeast monsoon (NEM), a small scale monsoon confined to parts of southern peninsular india comprising of the meteorological sub-divisions of tamil nadu, puducherry & karaikal (TN), kerala & mahe (KER), coastal Andhra Pradesh & Yanam(cap), Rayalaseema (RYS) and south interior Karnataka (SIK) occurs. For the subdivision of TN, the normal SWM seasonal rainfall realised is only about 35% (342.0 mm) of its annual rainfall (943.7 mm) as this subdivision comes under the rain-shadow region during the SWM. the Northeast Monsoon (Nem) season of October to December (OND) is the chief rainy season for this subdivision with 48% (447.4 mm) of its annual rainfall realised during this season and hence its performance is a key factor for this regional agricultural activities. The normal date of onset of NEM over coastal TN (CTN) 20 th October. The normal rainfall received during OND in TN is 447.4 mm.

During 2019, the northeast monsoon rainfall was normal (-19% to +19%) over TN, (+2%).

Table 7: Sub-divisional seasonal rainfall during October-December 2019

Subdivision	01 st October – 31 st December 2019		
	Actual (mm)	Normal (mm)	PDN(%)
TAMIL NADU, PUDUCHERRY & KARALKAL	454.7	447.4	+2%

The intra-seasonal rainfall distribution during Oct-Dec 2019 is presented in monthly, scales. Month-wise rainfall statistics are presented in Table-9.

Table 9: Sub-divisional monthly rainfall during NEM 2019

Sub-division	OCT			NOV			DEC		
	Actual (mm)	Normal (mm)	PDN (%)	Actual (mm)	Normal (mm)	PDN (%)	Actual (mm)	Normal (mm)	PDN (%)
TN	223.1	177.2	+26%	125.8	178.5	-30%	105.8	91.7	+15%

Tamil nadu had 224.4 mm, 27% above normal rainfall. among the 32 districts of the state, Nilgiris had by far the highest rainfall at 520.4 mm, 134% above normal. Karur had the lowest rainfall at 122 mm, 6% below normal. Just to illustrate how skewed the rainfall has been, the rainfall on just one day (31st oct) in some of the district has been close to or above 15% of the month's rainfall: Ramnathpuram (69 mm), Sivaganga (63.3 mm), Nilgiris (55.5 mm), Kanyakumari (63.9 mm).Excepting Madurai, Perambalur, Vellore, Thiruvannamalai and Puducherry in TN which came under *deficient* category received *normal to large excess* rainfall during the season.

State	No of LE Districts	No of E Districts	No of N Districts	No of D Districts	No of LD Districts	No of ND Districts	Total
Tamilnadu	3	13	15	1	0	0	32
Puducherry	0	1	3	0	0	0	4

Puducherry had 295.3 mm, 13% above normal rainfall in oct 2019. Puducherry district had the lowest rainfall at 252.2 mm, 1% below normal.

It is observed that 15-25 days of *active to vigorous* monsoon conditions prevailed over TN during the season.Regarding heavy rainfall occurrences (> 7 cm/day), TN experienced isolated *heavy* rainfall activity on 50 days during the season, out of which, 22 days were with isolated *very heavy* falls.

SOILS

The soils of the state can be broadly divided into three types viz. (1) Red (2) Black and (3) Alluvial soils, of which red soils are the most prominent type. Red soils are found in every district of the state but occupy major parts of the Madurai and Vellore districts. More than 63% of the areal extent of Tiruvallur, Kancheepuram, Salem, Coimbatore, Tirunelveli and Tiruchchirappalli districts is covered by the red soils. Some patches of arenaceous soils are also found along the coastal line. Almost all the alluvial soils in the state are confined to the deltaic regions of the Cauvery River in Cuddalore, Nagapattinam, Tiruvarur, Thanjavur and Tiruchchirappalli districts. Black soils are seen mostly in parts of Ramanathapuram, Cuddalore, Tirunelveli and Thanjavur districts.

HYDROGEOLOGY

The state of Tamil Nadu is underlain by geological formations ranging in age from Archaean to Recent. The crystalline rocks of Archaean age like granites, gneisses, charnockites, etc., are of considerable interest as they occupy nearly 73% of the total geographical area of the state. Semi consolidated and consolidated formations ranging in age from Mesozoic to Recent overlie the crystalline basement and their occurrence is confined to the east coast only. The general stratigraphic succession of the formations in the state is presented in **Table 11**.

TABLE 11: STRATIGRAPHIC SUCCESSION OF GEOLOGICAL FORMATIONS IN TAMIL NADU & U.T. OF PUDUCHERRY

ERA	AGE	STAGE	LITHOLOGY
Quaternary	Recent	-	Soil, alluvium and beach sands
	Pleistocene	-	Boulder conglomerates, older alluvium and laterites.
Tertiary	Pliocene	Karaikal beds	Sands and clay with fossils,
	Miocene	Cuddalore Sandstone	Mottled and friable sandstones, buff coloured clays and gravels.
Mesozoic	Cretaceous	Ninniyur	Arenaceous limestones and sandstones.
		Ariyalur	Sandstones and clays
		Trichirappalli	Sandstones, clays and shell limestones
		Uttattur	Basal limestones, coral clays and sandy beds
	Jurassic	Satyavedu	Ferruginous sandstones and conglomerates
		Sriperum-budur	Clays, shales and feldspathic sandstones
		-Unconformity-	
Azoic	Archaean	Archaean	Gneisses, charnockites and ultra-basic intrusives.

The crystalline complex of the Archaean age forms the oldest of the rock types in the state. Pink and grey granites are exposed in Cuddalore, Villuppuram, Coimbatore, Madurai and Tirunelveli districts. Rocks of the Khondalite group are well exposed in the southern districts of Tamil Nadu. The ultra-mafic rocks are widespread in the districts of Vellore, Dharmapuri, Coimbatore and Salem. Charnockite is more prominent in the northwestern part of Tamil Nadu and is well exposed in the hill ranges of Javadi, Shevroy, Palani and Nilgiris.

The Mesozoic era is represented by the upper Gondwanas of Jurassic age and marine beds of Cretaceous age. The Gondwana beds occur as patches spread over nearly 2001 sq. km. in Tiruvallur, Kancheepuram and Vellore districts. The Cretaceous beds are well exposed in Tiruchchirappalli district. The Cretaceous beds overlie the granitic gneisses and charnockites along the western fringe and by alluvium in the north. They are also exposed in Vriddhachalam area of Cuddalore district.

The important Tertiary formations in the state include the Cuddalore sandstones, Karaikal beds and Conjeevaram gravels. They occur in a wide stretch and extend from Karaikudi through Pudukkottai, Thanjavur, Cuddalore, Puducherry to Chennai. Alluvium and coastal sands in the coastal tract and in river valleys overlie them. The Panamparai sandstones of sub-Recent age occur along the coastal tract of Tirunelveli district.

The nature of the geological formations and the structural features are the principal factors governing the occurrence and movement of ground water in any hydrogeological environment.

Ground water in the hard rocks occurs in the weathered zones ranging in thickness from less than a metre to 25 m and in the underlying fractured and sheared zones. It occurs under water table conditions at shallow levels and under semi-confined to confined conditions in the fractured, jointed and sheared zones as seen in Coimbatore, Salem, Dharmapuri, Madurai districts, etc. In the sedimentaries, ground water occurs under water table and confined conditions.

II. DEPTH TO WATER LEVEL

May 19

The behavior of ground water table during May 2019 in Tamil Nadu State and Puducherry and Karaikal regions of U.T of Puducherry has been studied by monitoring the dug/Tube wells. The water level data were analysed in detail and salient features are as under. A statement showing the distribution of Ground Water Monitoring wells tapping phreatic aquifers in different depth ranges, along with depth to water level is presented in **Table-12**. The ground water scenario in May 2019 is presented in **Figure 3**. Salient features of the depth to water level scenario during May 2019 are given below.

1. The depth to water level recorded from 0.6 (Nilgiris district) to 41.15 m bgl (Namakkal district).
2. Depth to water level over major part of the State (71% of the wells), particularly in the central and Eastern parts are < 10m bgl. Where as the central and North western parts have recorded shows water level of > 10 m bgl.
3. Water levels < 2 m is observed in 5% of wells.
4. Depth to water level in the range of 2 to 5 m bgl has been recorded in 27 % of wells analysed.
5. Depth to water level in the range of 5 to 10 m bgl has been recorded in 40% of wells analysed.
6. Depth to water level in the range of 10 to 20 m bgl has been observed in 24 % of wells analysed.
7. 5 % of the wells have recorded water level of >20 m. and are scattered particularly in Coimbatore, Dharmapuri, Erode, Nilgiris, Perambalur, Salem, Tiruvannamalai and Vellore districts.
8. More than 50% of wells of Chennai, Nagapattinam, Ramanathapuram, Theni and Thiruvardur districts of Tamilnadu and Karaikal and Puducherry regions of UT of Puducherry have recorded water level in 2-5 m bgl range.
9. More than 50% of wells of Ariyalur, Kancheepuram, Madurai, Sivagangai, Tiruvannamalai and Tuticorin districts have recorded water level in 5 – 10 m bgl range.
10. More than 50% of wells of Dharmapuri and Perambalur districts have recorded water level in 10 – 20 m bgl range.
11. 5% are showing water level of > 20 m bgl which are scattered in Coimbatore, Dharmapuri, Nilgiris and Salem districts.

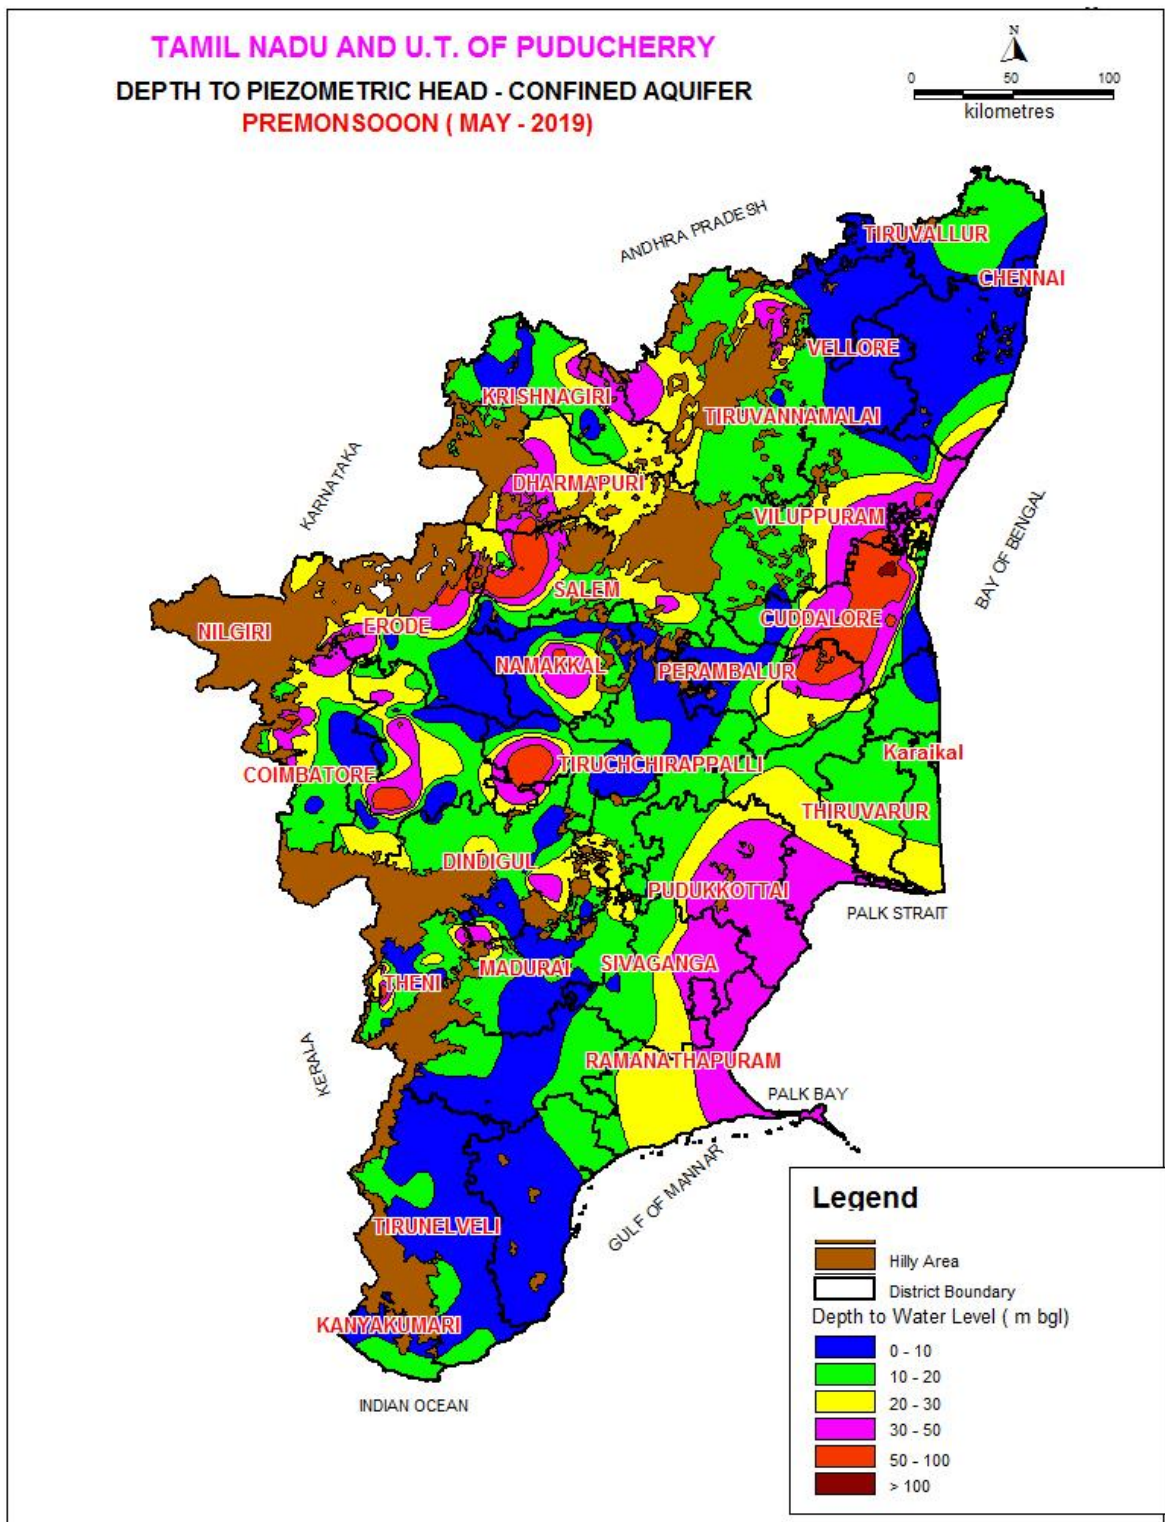

Figure 4: Depth To Piezometric Surface (May 2019)

August 2019

The statement showing the distribution of Ground Water Monitoring wells along with depth to water level of phreatic aquifer in different depth ranges is presented in **Table 14** and **Figure 5** depicts the ground water scenario in August 2019. Salient features of the depth to water level scenario during August 2019 are given below.

1. The depth to water level recorded from 0.30 (Kanyakumari district) to 46.35 m bgl (Coimbatore district).
2. Depth to water level over major part of the State (69% of the wells), particularly in the central and Eastern parts are < 10m bgl. Whereas the central and North western parts have recorded shows water level of > 10 m bgl.
3. Water levels < 2 m is observed in 5 % of wells particularly in Chennai, Cuddalore and Nilgiris districts.
4. Depth to water level in the range of 2 to 5 m bgl has been recorded in 24% of wells analysed.
5. Depth to water level in the range of 5 to 10 m bgl has been recorded in 41% of wells analysed.
6. Depth to water level in the range of 10 to 20 m bgl has been observed in 26% of wells analysed.
7. 4 % of the wells have recorded water level of >20 m. and are scattered particularly in Coimbatore, Dharmapuri, Dindigul, Erode, Namakkal, Salem and Tiruppur districts.
8. More than 50% of wells of Ariyalur, Nagapattinam and Ramanathapuram districts of Tamilnadu and Karaikal region of UT of Puducherry have recorded water level in 2-5 m bgl range.
9. More than 50% of wells of Chennai, Kancheepuram, Pudukottai, Tiruvannamalai, Tiruvarur, Tuticorin and Villupuram districts of Tamilnadu and 40% of Pudukottai region of UT of Puducherry have recorded water level in 5 – 10 m bgl range.
10. More than 50% of wells of Dharmapuri, Namakkal and Sivaganga districts have recorded water level in 10 – 20 m bgl range.
11. 4% wells are showing water level of > 20 m bgl which are scattered in Coimbatore, Dharmapuri, Dindigul, Erode, Namakkal, Perambalur, Salem, Tiruvallur, Tirunelveli and Vellore districts.

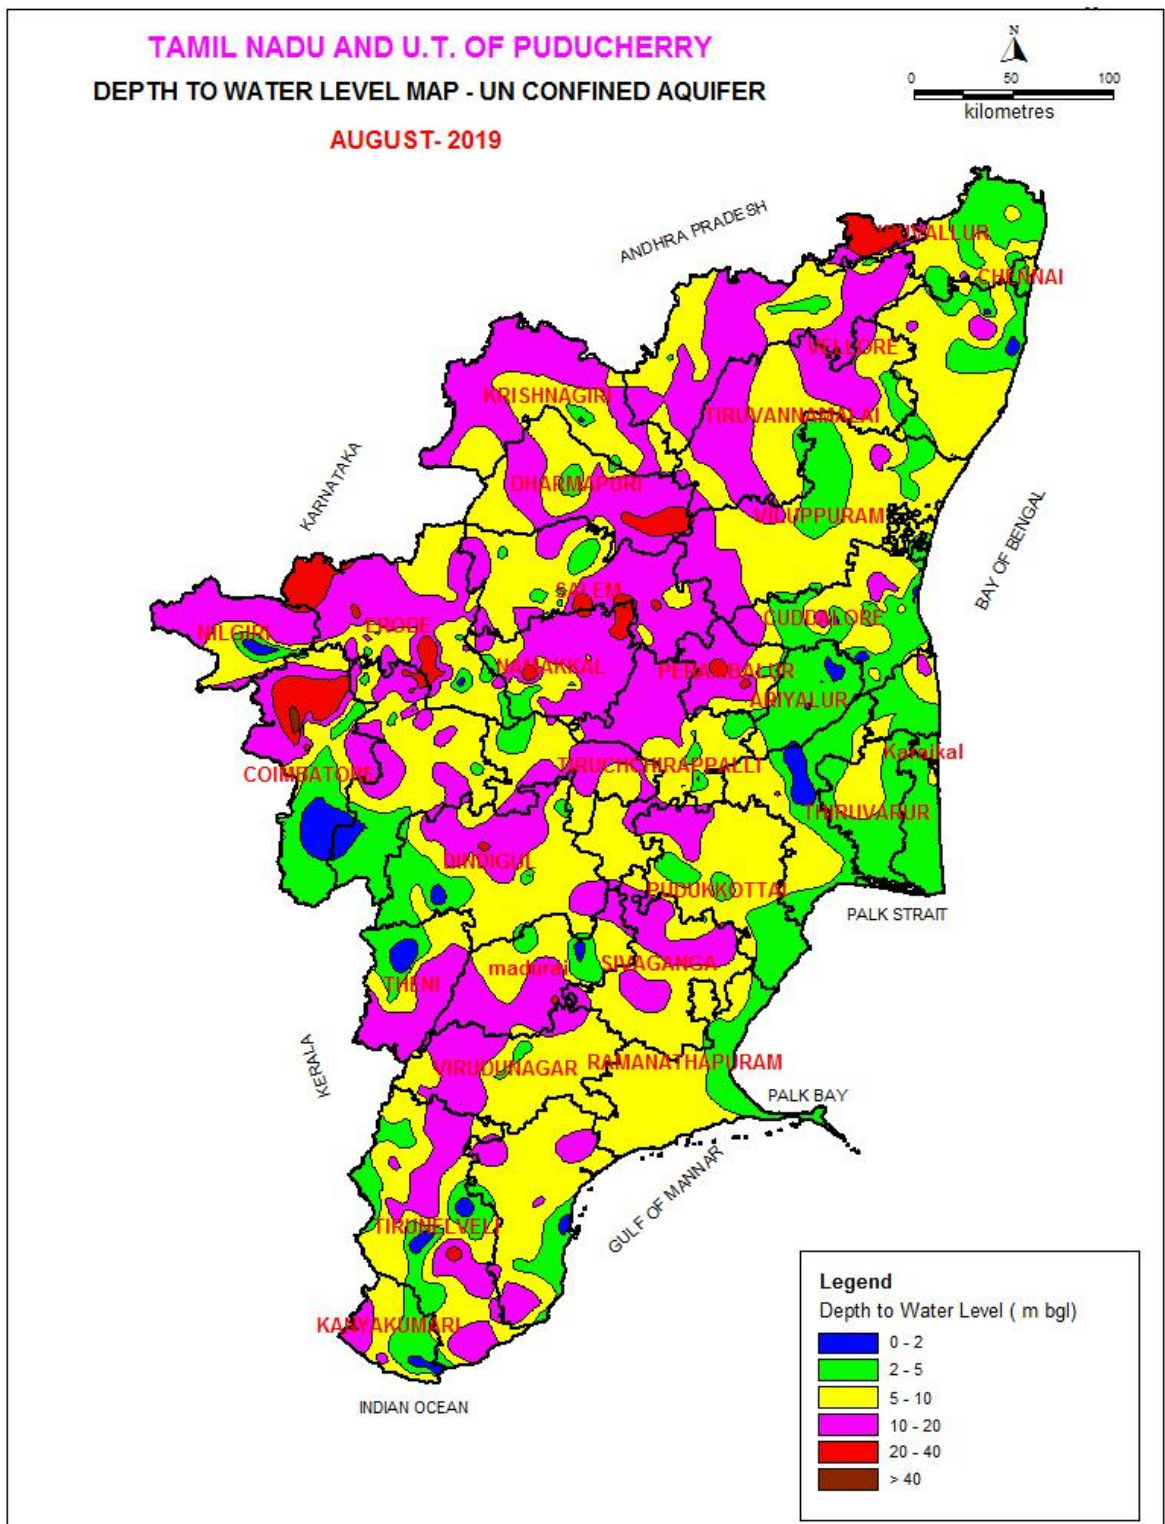

Figure 5: Depth To Water level map (August 2019)

Depth to piezometric surface has been recorded from piezometers spread all over the state both in hardrock and soft rock areas. The statement showing the depth to piezometric surface is given in **Table 15**. The ground water scenario of Confined aquifer in August 2019 is presented in **Figure 6**. Salient features of the depth to piezometric surface during August 2019 are given below.

1. The piezometric surface ranged from 4.6 (Chennai district) m to 114.0 m bgl (Erode district).
2. 32% of wells have recorded depth to piezometric surface within 10 mbgl.
3. 25 % of wells show depth to piezometric surface between 10 to 20 mbgl.
4. 11 % have recorded piezometric surface between 20 to 30 mbgl.
5. 16% have recorded 30 to 50 m bgl.
6. 16% of the wells recorded more than 50 m bgl.
7. More than 50% of wells of Chennai, Kancheepuram, Madurai, Namakkal, Tirunelveli, and Tiruppur districts of Tamilnadu have recorded Piezometric head in 0-10 m bgl range.
8. More than 50% of wells of Kanyakumari, Nagapattinam, Perambalur, Pudukottai, Sivaganga, Tiruvannamalai and Vellore districts have recorded Piezometric head in 10-20 m bgl range.
9. More than 50% of wells of Ramanathapuram district and Puducherry region of UT of Puducherry have recorded Piezometric head in 20 – 30 m bgl range.
10. More than 30% of wells of Ariyalur and Coimbatore district have recorded Piezometric head in 30 – 50 m bgl range.
11. More than 40% of wells of Ariyalur, Cuddalore, Dharmapuri, and Villupuram districts have recorded Piezometric head in >50 m bgl range.

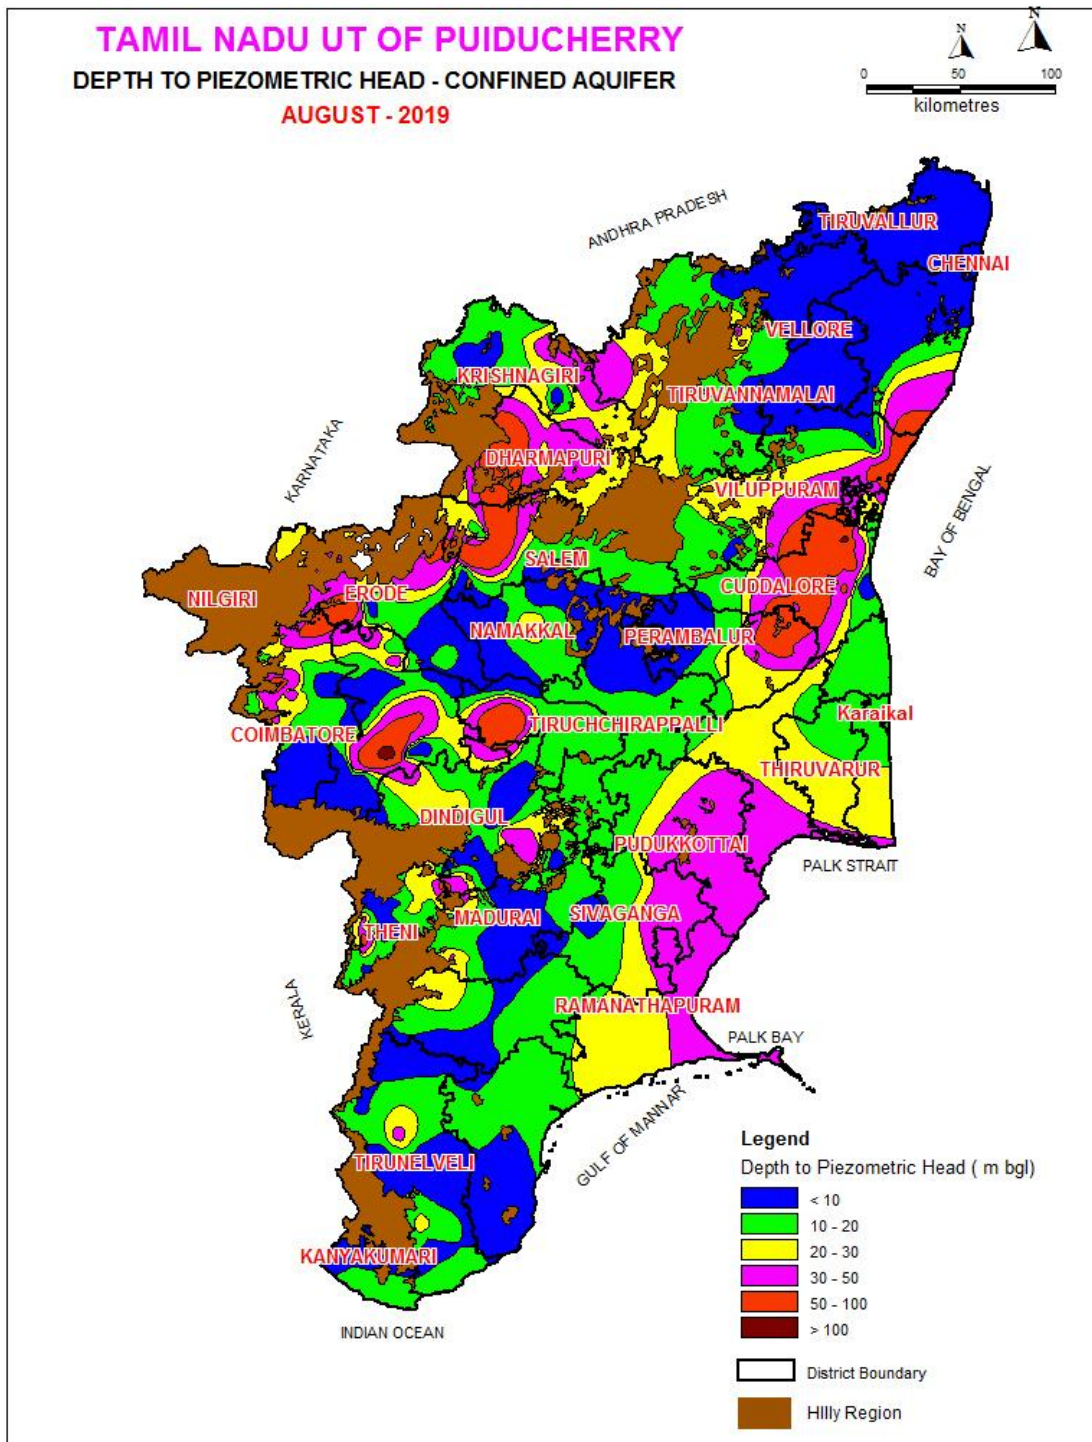

Figure 6: **Depth To Piezometric Surface (August 2019)**

November 2019

The statement showing the distribution of Ground Water Monitoring wells along with depth to water level of phreatic aquifer in different depth ranges is presented in **Table 16** and **Figure 7** depicts the ground water scenario in November 2019. Salient features of the depth to water level scenario during November 2019 are given below.

1. The depth to water level recorded from 0.05 (Theni district) to 43.70 m bgl (Coimbatore district).
2. Depth to water level over major part of the State (88% of the wells), particularly in the central and Eastern parts are < 10m bgl. Where as the central and North western parts have recorded shows water level of > 10 m bgl.
3. Water levels < 2 m is observed in 28 % of wells
4. 32 % of the wells have recorded water level of 2-5 m bgl.
5. Depth to water level in the range of 5 to 10 m bgl has been recorded in 29% of wells analysed.
6. Depth to water level in the range of 10 to 20 m bgl has been observed in 10% of wells analysed.
7. Only 2% of the wells analysed have recorded water level of >20 m bgl particularly in Coimbatore, Madurai and Krishnagiri districts.
8. More than 50% of wells of Ariyalur, Cuddalore, Nagapattinam, Pudukottai, Ramanathapuram, Thanjavur, Tirunelveli, Tiruvarur and Tuticorin districts of Tamilnadu and both Karaikal and Puducherry regions of UT of Puducherry have recorded water level in <2 m bgl range.
9. More than 40% of wells of Ariyalur, Kancheepuram, Nilgiri, Perambalur, Tiruvallur, Trichy and Virudunagar districts of Tamilnadu and both Karaikal region of UT of Puducherry have recorded water level in 2-5 m bgl range.
10. More than 40% of wells of Dharmapuri, Namakkal and Thenidistricts of Tamilnadu and Puducherry region of UT of Puducherry have recorded water level in 5 – 10 m bgl range.
11. More than 20% of wells of Dharmapuri, Dindigul, Sivaganga, Theni and Vellore districts have recorded water level in 10 – 20 m bgl range.

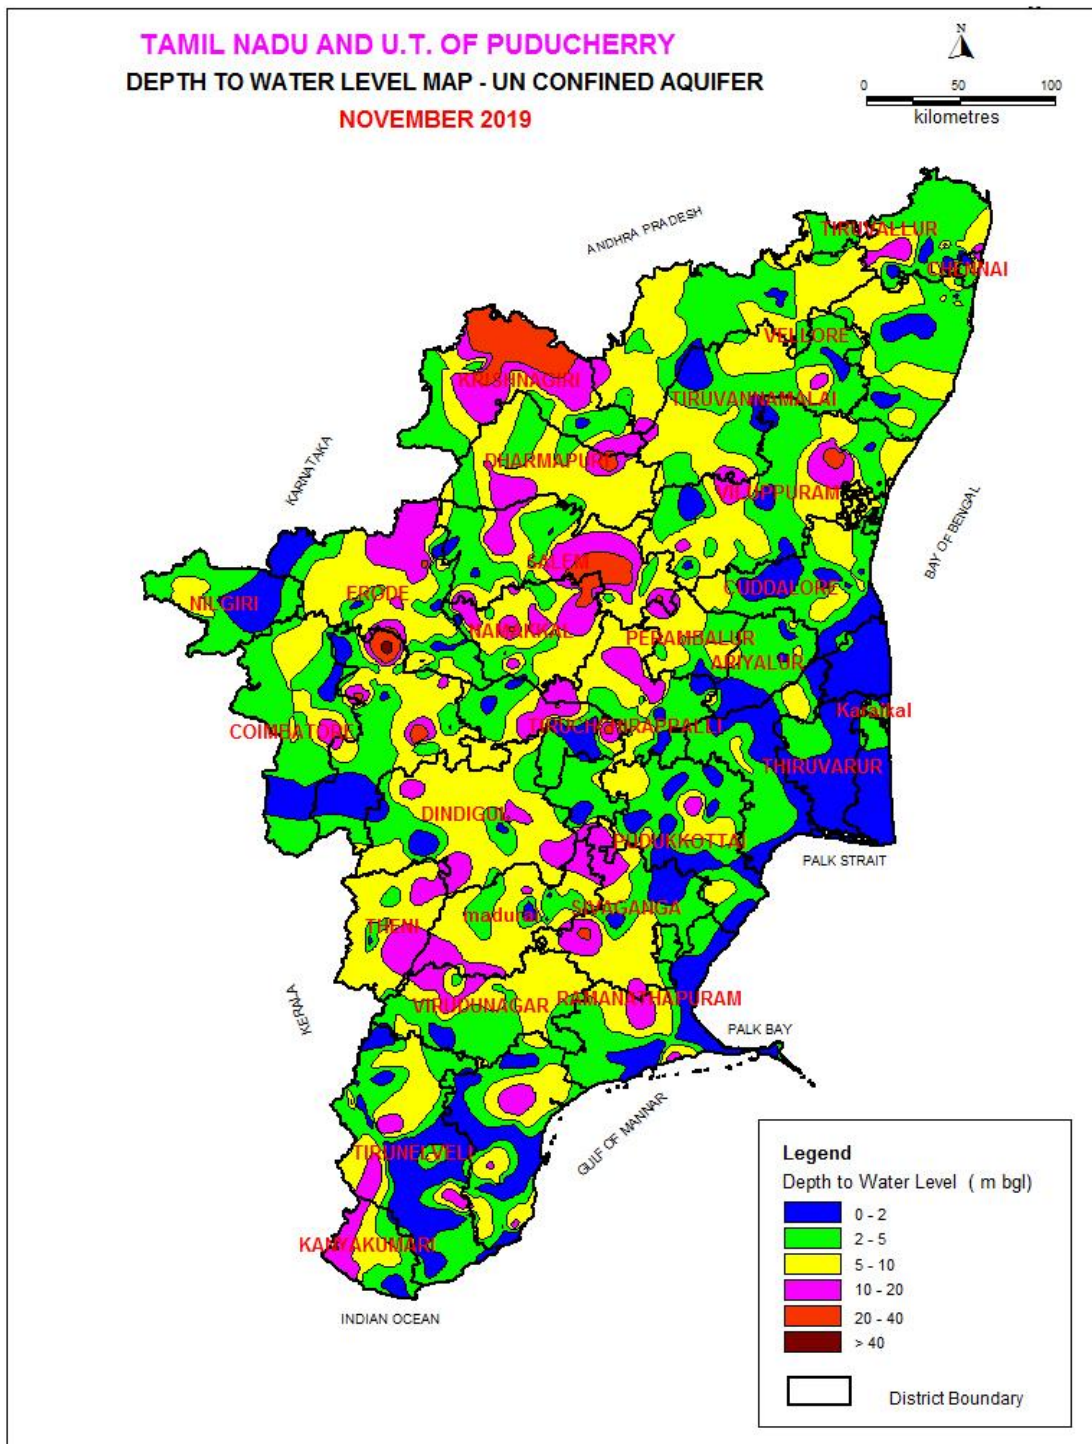

Figure 7: Depth to Water level map (November 2019)

Depth To Piezometric Surface

Depth to piezometric surface has been recorded from piezometers spread all over the state both in hardrock and soft rock areas. The statement showing the depth to piezometric surface is given in **Table-17**. The ground water Scenario of Confined aquifer during November 2019 is depicted

in **Figure 7**. Salient features of the depth to piezometric surface during November 2019 are given below.

1. The piezometric surface ranged from 0.35 (Tirunelveli district) to 98.75 m bgl (Cuddalore district).
2. 51% of wells have recorded depth to piezometric surface within 10 mbgl.
3. 18 % of wells show depth to piezometric surface between 10 to 20 mbgl.
4. 10 % have recorded piezometric surface between 20 to 30 mbgl.
5. 11% have recorded 30 to 50 m bgl.
6. 11% of the wells recorded more than 50 m bgl.
7. More than 50% of wells of Chennai, Dharmapuri, Erode, Kancheepuram, Kanyakumari, Karur, Krishnagiri, Karur, Namakkal, Perambalur, Pudukottai, Salem, Sivaganga, Tirunelveli, Tiruppur, Tiruvannamalai, Tuticorin, Vellore, Villupram and Virudunagar districts of Tamilnadu have recorded Piezometric head in 0-10 m bgl range.
8. More than 50% of wells of Nagapattinam, Namakka and Ramanathapuram districts have recorded Piezometric head in 10-20 m bgl range.
9. More than 10% of wells of Coimbatore, Cuddalore, Dindigul, Erode, and Karur districts of Tamilnadu and >80% of wells of Puducherry region of UT of Puducherry have recorded Piezometric head in 20 – 30 m bgl range.
10. More than 20% of wells of Cuddalore, Krishnagiri, Sivaganga, Theni districts and 50% of wells of Dharmapuri districts have recorded Piezometric head in 30 – 50 m bgl range.
11. More than 30% of wells of Cuddalore and > 50% of wells of Ariyalur districts have recorded Piezometric head in 50-100 m bgl range.
12. Only 6% of Cuddalore district have Piezometric head of > 100 mbgl.

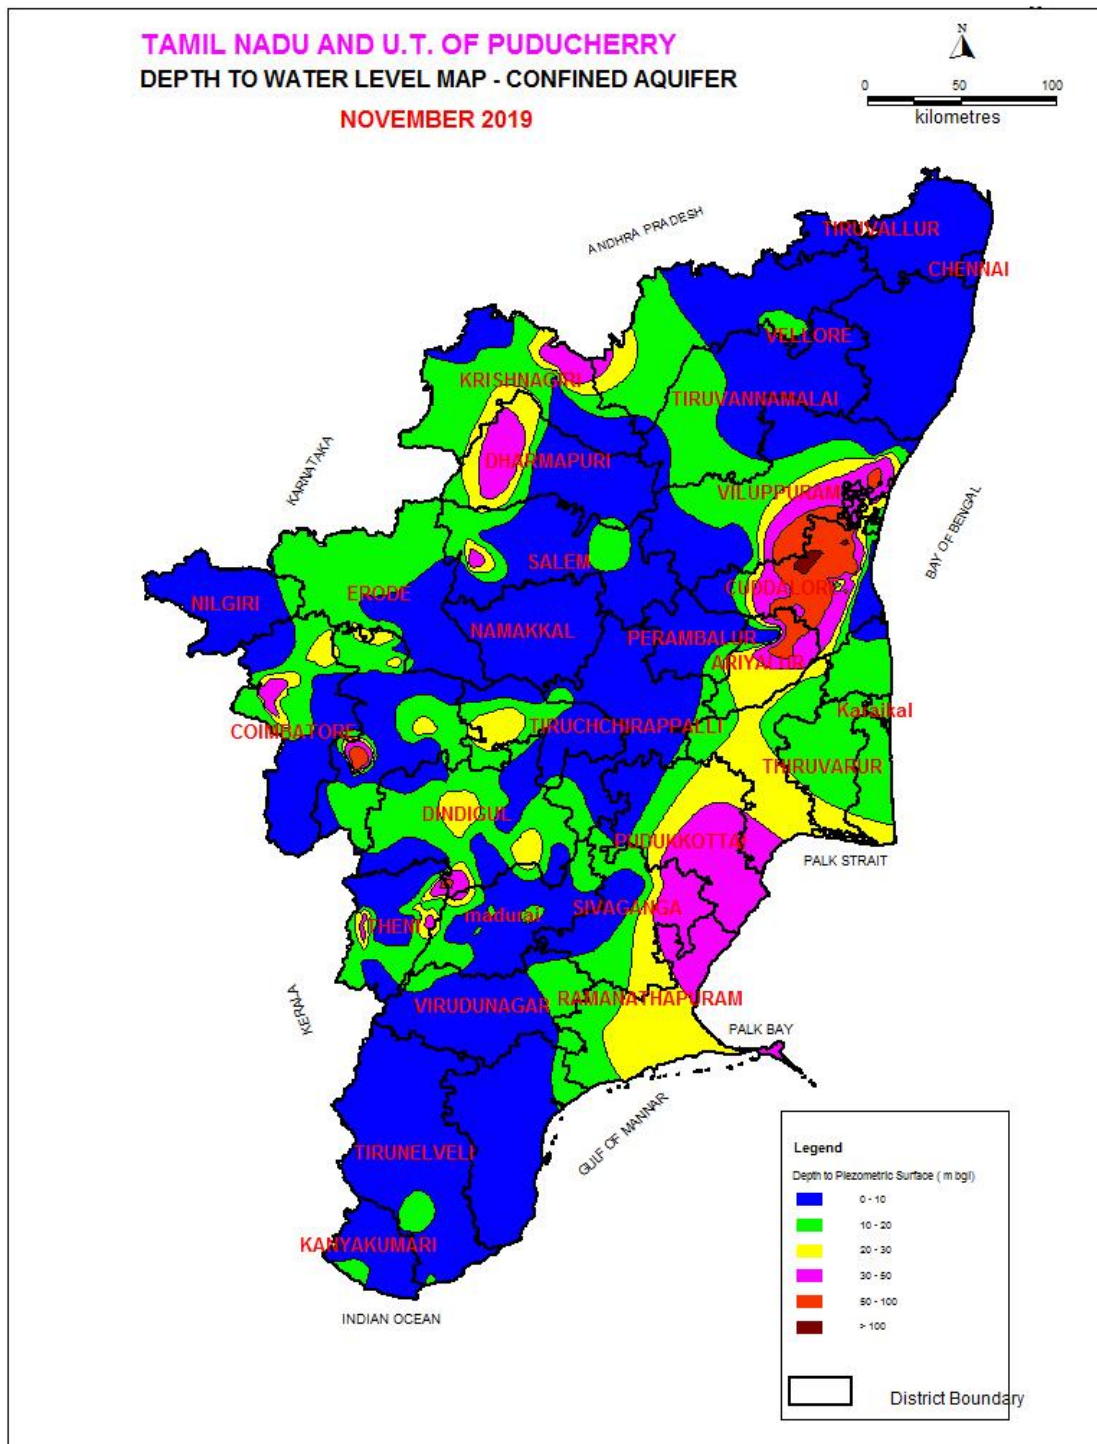

Figure 7: Depth to Piezometric Surface (August 2019)

January 2019

The statement showing the distribution of ground Water Monitoring wells along with depth to water levels in phreatic aquifer in different depth ranges is presented in **Table 18** and **Figure 8** depicts the ground water scenario in January 2019.

1. A perusal of the water level data reveals that the depth to water level ranged from 0.10 m bgl (Tirunelveli district) to 42.76 m bgl (Coimbatore District) in Tamil Nadu and UT of Puducherry.
2. Over all 85% of the wells monitored in the state and UT are in <10 m bgl range and spreaded over entire tamil nadu.
3. 2 % of the wells have recorded water level of >20 m and are scattered particularly in Coimbatore and Erode and Madurai districts.
4. Depth to water level in the range of <2 m bgl has been recorded in 19 % of wells analysed and found scattered in all the districts.
5. Depth to water level in the range of 2 to 5 m bgl has been recorded in 38% of wells analysed.
6. Depth to water level in the range of 5 to 10 m bgl has been recorded in 29% of wells analysed.
7. Depth to water level in the range of 10 to 20 m bgl has been observed in 13% of wells analysed.
8. Except Karaikal region of UT of Puducherry, no districts of Tamilnadu have recorded more than 50% of wells in 0-2 range.
9. More than 50% of wells of Ariyalur, Kancheepuram, Nagapattinam, Tiruvallur, Tiruvarur, and Villupuram districts of Tamilnadu and Karaikal region of UT of Puducherry have recorded water level in 2-5 m bgl range.
10. More than 40% of wells of Dharmapuri, Dindigul, Kanyakumari, Krishnagiri, Madurai, Salem, Theni, Tiruppur and Virudunagar districts and 50% of wells of Perambalur district have recorded water level in 5 – 10 m bgl range.
11. More than 20 % of wells of Dharmapuri, Erode, Namakkal, Salem, Sivaganga, Trichy and Vellore districts have recorded water level in 10 – 20 m bgl range.

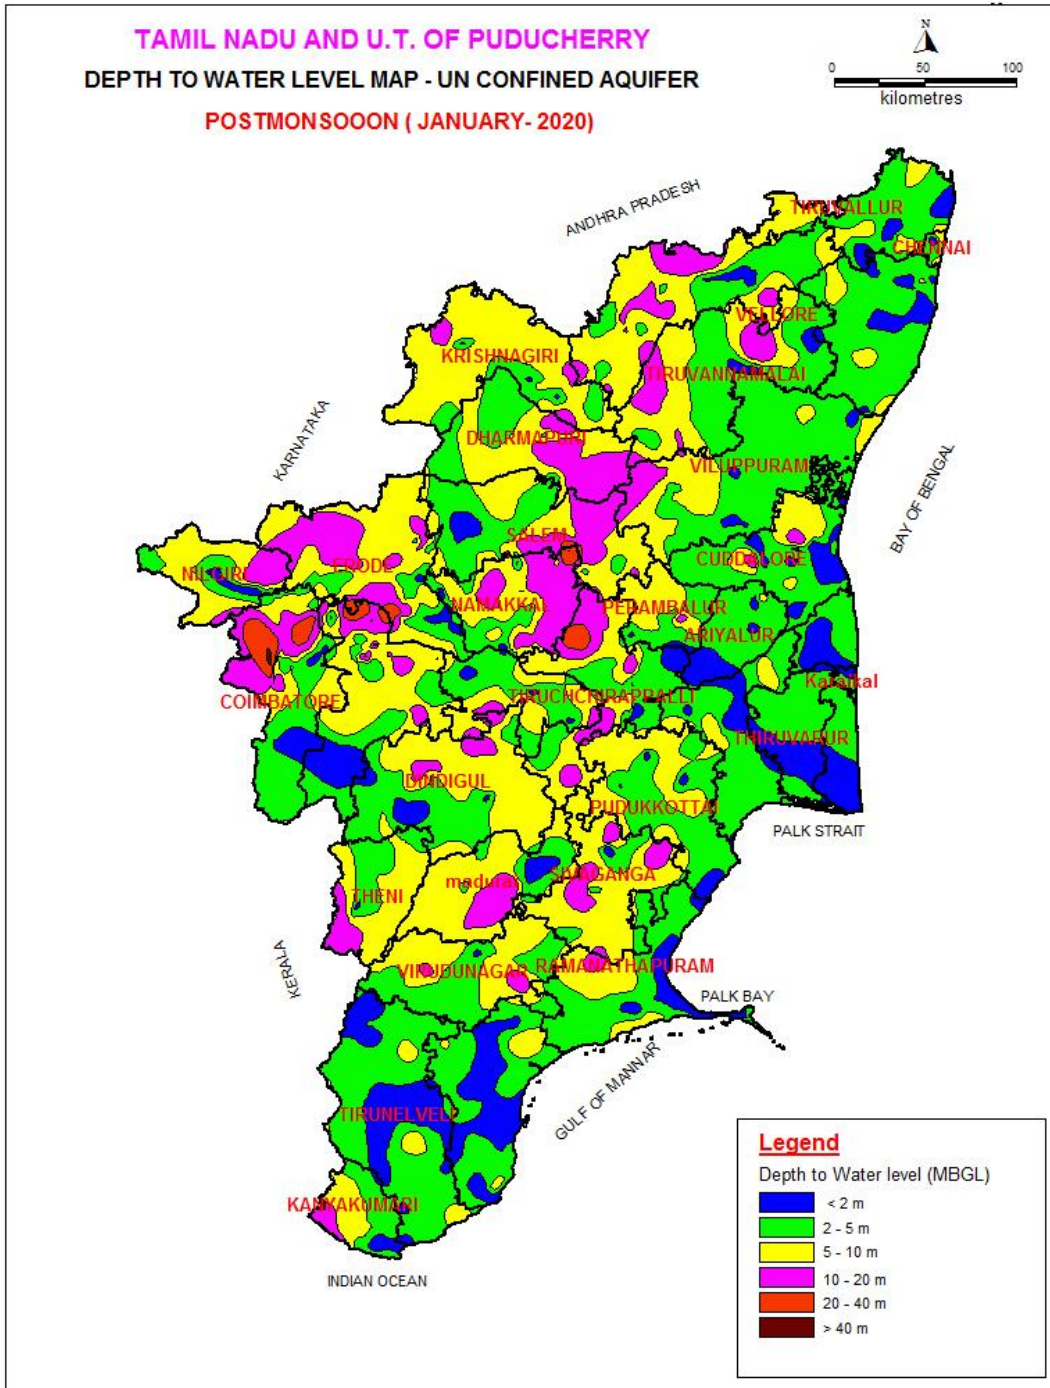

Figure 8: Depth to water level map (January 2020)

Depth To Piezometric Surface

Depth to piezometric surface has been recorded from piezometers spread all over the state both in hardrock and soft rock areas. The statement showing the depth to piezometric surface is given in **Table-19**. The ground water AScenario of Confined aquifer during November 2018 is depicted in **Figure 9**. Salient features of the depth to piezometric surface during January 2019 are given below.

1. The depth to piezometric surface ranged from 0.30 m bgl (Tirunelveli district) to 111.44 m bgl (Cuddalore District) in Tamil Nadu and UT of Puducherry.
2. 50% of wells have recorded depth to piezometric surface of less than 10 mbgl.
3. 18 % of wells show depth to piezometric surface between 10 to 20 mbgl.
4. 8 % have recorded piezometric surface between 20 to 30 mbgl.
5. 10% have recorded 30 to 50 m bgl.
6. 13% of the wells recorded more than 50 m bgl.
7. Except Ariyalur, Coimbatore, Cuddalore, Dindigul, Krishnagiri, Ramanathapuram, Theni, Trichy and Tiruvallur districts of Tamilnadu and Puducherry region of UT of Puducherry all other districts have recorded Piezometric head in 0-10 m bgl range in more than 50% of wells.
8. 50% of wells of, Nagapattinam district have recorded Piezometric head in 10-20 m bgl range.
9. Only Puducherry region have recorded Piezometric head in 20 – 30 m bgl range in more than 50% of wells.
10. Only Dharmapuri and Ramanathapuram district has recorded Piezometric head in 30-50 m range in more than in 50% of the wells.
11. Only Ariyalur district has recorded Piezometric head in 50 – 100 m bgl range in more than 50% of wells.
12. More than 100 m bgl piezometric head is recorded only in 4% of wells of Cuddalore and Erode districts.

District	No of Wells analysed	Depth to piezometric surface in the range of (mbgl)

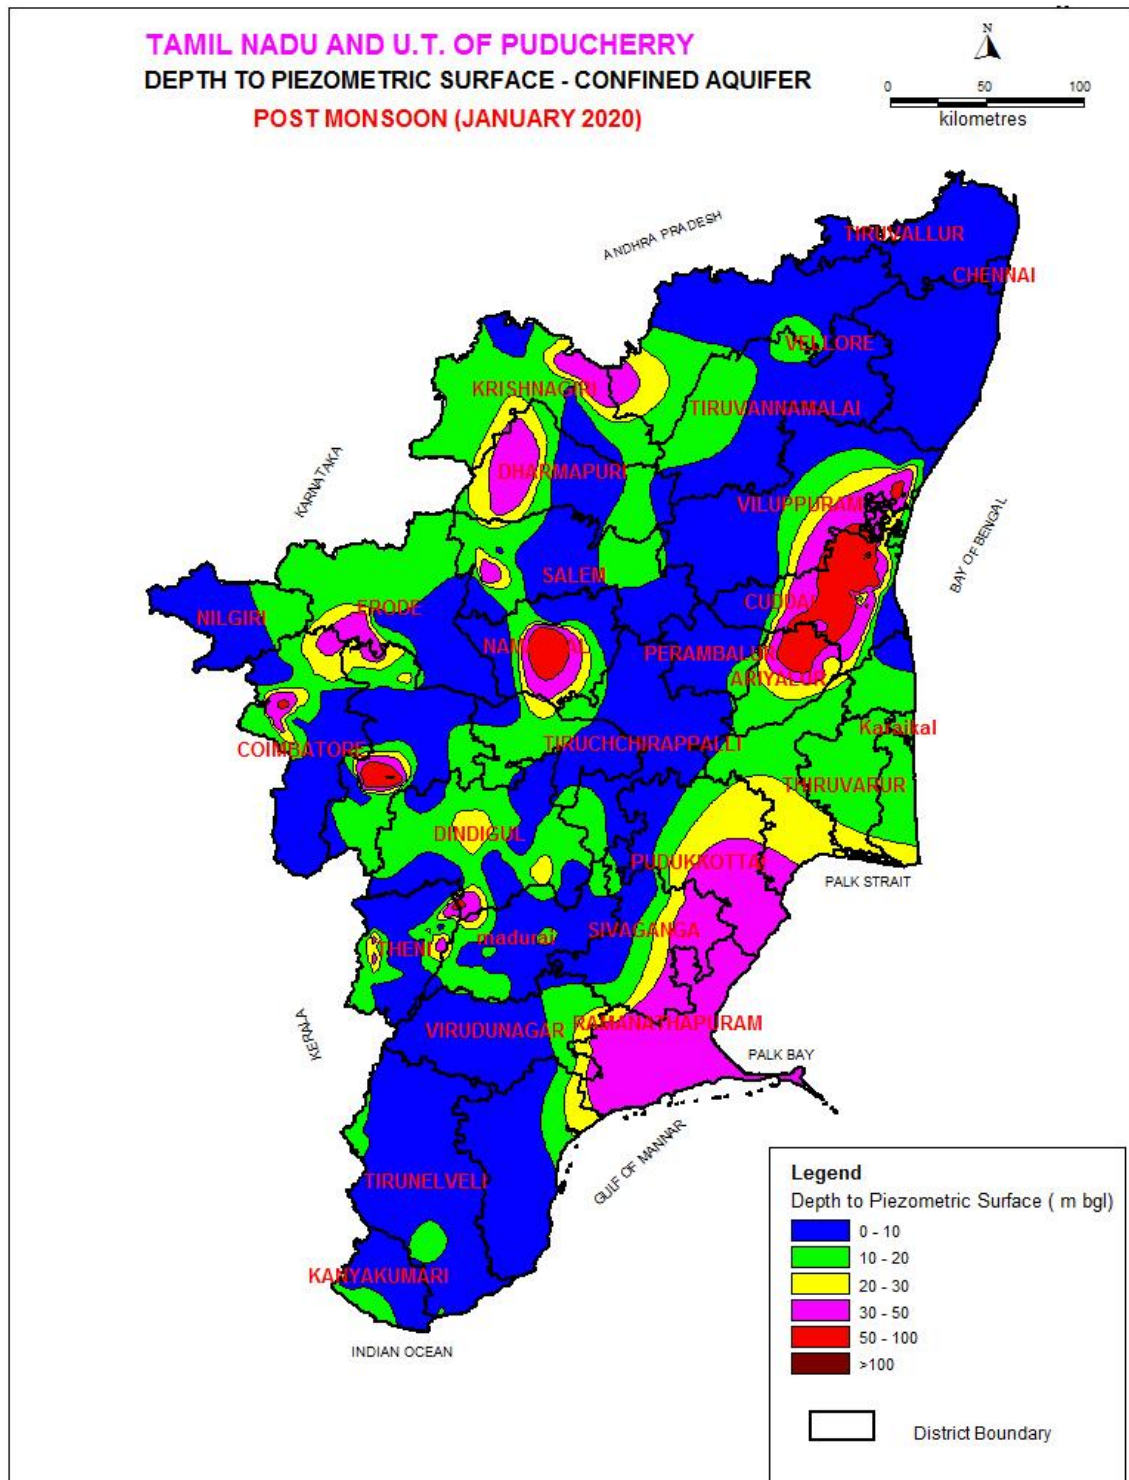

Figure 9: Depth to Piezometric Surface (August 2019)

III. FLUCTUATION OF WATER LEVEL

The water level fluctuation denotes the cumulative effect of southwest and northeast monsoons and ground water development during the period. Rise denotes adequate compensation of the ground water development and fall denotes inadequacy of recharge.

Three types of fluctuations have been calculated, viz. 1) Seasonal, 2) Decadal and 3) Annual fluctuations

Seasonal Fluctuation

Seasonal fluctuation is derived by comparing Post monsoon seasons's water level with Premonsoon's water level which gives the clear picture of the recharge effect of the monsoon and the ground water withdrawal despite monsoon recharge.

MAY 2019& JANUARY 2020

The statement showing the distribution of ground water monitoring wells falling in different ranges of fluctuation is presented in **Table 20** and **Figure 11**. A comparison of water level shows that a rise in the water level is recorded in 90 % of the wells have recorded rise in water level while comparing the Jan 2020 water level with premonsoon May 2019. The rise in 35 % of wells are in 0-2 m range.

1. Decline of 2-4 m and > 4 m is observed in 2% each.
2. All districts of Tamilnadu and the entire UT of Puducherry have experienced rise in more than 50% of the wells.
3. Rise in the water level in the range of 0-2m has been observed in 34% of wells analysed and noted in all over the districts.
4. Rise in the water level in the range of 2-4 m has been observed in 26 percent of wells analysed and found all over the state except Nilgiris and Perambalur districts of state and Karaikal region of UT of Puducherry.
5. Rise in water level more than 4 m has been observed in 30 percent of wells analysed and found all over the state except Ariyalur, Chennai, and Tiruvarurdistricts of state and UT of Puducherry.
6. The fall in water level in the range of 0-2m has been observed in 6% of wells analysed and found only mainly in Coimbatore, Erode, Namakkal and Nilgirisdistricts and as scattered small patches in other districts of state.
7. The fall in water level in the range of 2-4and > 4 m have been observed in 2 percentage each of wells analysed and noted in, Erode, Salem, Thanjavur, Tiruppur and Trichydistricts.

Table 20: Seasonal Water level fluctuation - Premonsoon (May 2019) with Postmonsoon (Jan 2020) -Unconfined

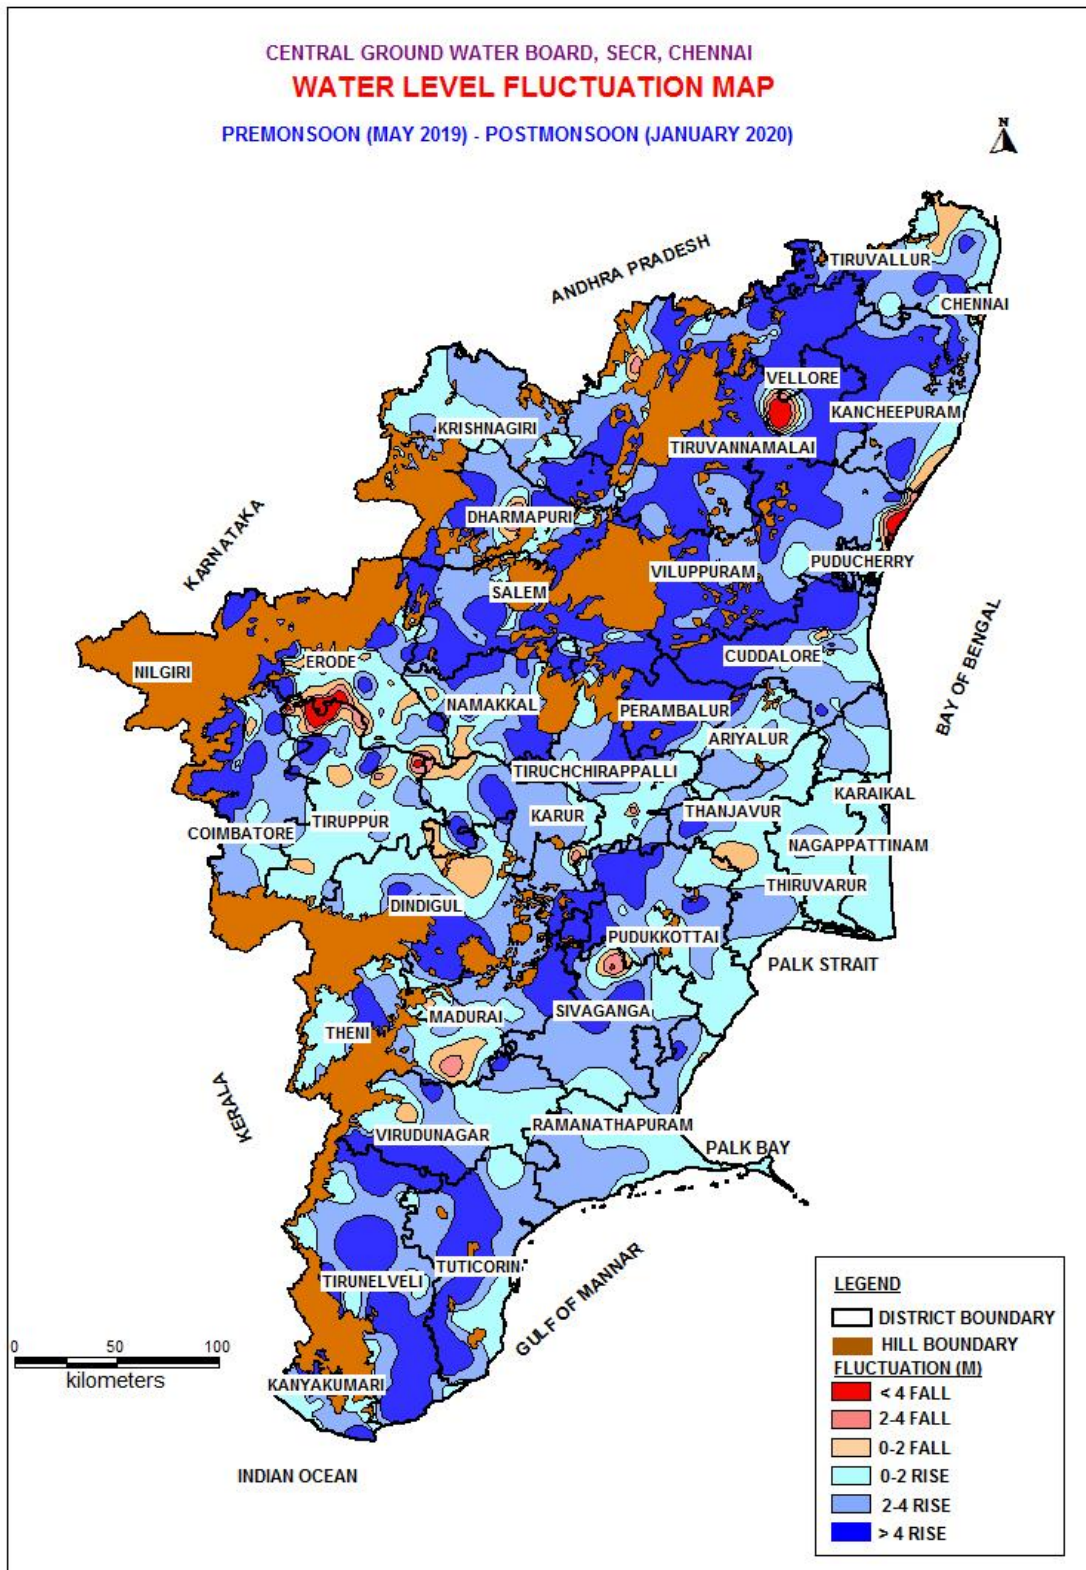

Figure 11: Water level fluctuation map (May 2019- January 2020)

Confined Aquifer

The statement showing the distribution of ground water monitoring wells falling in different ranges of Piezometric fluctuation is presented in **Table 21**. A comparison of piezometric heads shows that a rise in the water level is recorded in 86% of wells analysed, while 14% recorded fall. The rise is mainly in >4 m range and the fall is in 0-2 range.

1. The entire state have recorded rise in more than 50% wells except Nilgiris, Ramanathapuram, Thanjavur, Tiruvarur, Trichy and Tiruvallur districts of state and Karaikal region of UT of Puducherry where no representative monitoring wells tapping deeper aquifers are available.
2. Rise in the water level in the range of 0-2m has been observed in 24% of wells analysed and noted in all the districts mainly in Ariyalur, Cuddalore, Dindigul, Madurai, Theni and Tirunelveli.
3. Rise in the water level in the range of 2-4 m has been observed in 16 percent of wells analysed and found all over the state mainly in Erode and Madurai districts.
4. Rise in water level more than 4 m has been observed in 47 percent of wells analysed and found all over the state except Chennai, Kanyakumari, Nilgiris, Ramanathapuram, Thanjavur, Tiruvarur, Tiruppur and Tiruvallur districts of Tamilnadu and Karaikal region of UT of Puducherry.
5. The fall in water level in the range of 0-2m has been observed in 7% of wells analysed and found mainly in Cuddalore, Erode and Theni of state.
6. The fall in water level in the range of 2-4m has been observed in 3 percentage of wells analysed and noted mainly in Namakkal district.
7. The fall in water level more than 4 m has been observed in 5% of wells analysed and noted in Coimbatore and Cuddalore districts.

Decadal Fluctuation

FLUCTUATION BETWEEN DECADAL MEAN WATER LEVEL & WATER LEVEL

The fluctuation of water level recorded during the particular period with respect to decadal mean of the same period indicate the impact of ground water development and ground water recharge during the decade. Positive fluctuation indicates improved recharge over and above ground water development and negative fluctuation indicate increased ground water development over and above the recharge.

Mean Water Levels For The Period May 2009-2018& May 2019

Unconfined Aquifer

The water level data for May 2019 were compared with mean water level for the period May 2009-2018. The district-wise distribution of Ground water monitoring wells falling in different ranges of water level fluctuation is presented in **Table 22** and **Figure 12**. A comparison of water level shows a rise in 34% and a fall in 66% of the wells. Both the rise and fall are mainly in 0-2 m range.

1. The entire state have recorded fall in more than 50% wells except Erode, Kanyakumari, Nilgiris, Thanjavur and Tiruppur districts of state.
2. Rise in the water level in the range of 0-2m has been observed in 22% of wells analysed, spread all over the State, except perambalur and Pudukottai districts of Tamilnadu state and Puducherry region of UT of Puducherry.
3. Rise in the water level in the range of 2-4 m has been observed in 6% of wells analysed and noted mainly in Coimbatore, Erode, Namakkal and Pudukottai districts.
4. Rise in water level more than 4 m has been observed in 5% of wells analysed and noted mainly in Coimbatore, Erode and Namakkal districts.
5. The fall in water level in the range of 0-2m has been observed in 37% of wells analysed and noted all over the state, and U.T. of Puducherry except Pudukottai district.
6. The fall in water level in the range of 2-4m has been observed in 19% of wells analysed and noted in entire state except Nagapattinam, Nilgiris, Thanjavur, Theni and Tiruvarur districts of state and Karaikal region of U.T. of Puducherry.

7. Fall in water level more than 4 m has been observed in 10% of wells analysed and noted in entire state except Ariyalur, Chennai, Krishnagiri, Nagapattinam, Thanjavur, Theni and Tiruvarur districts of Tamilnadu and U.T. of Puducherry.

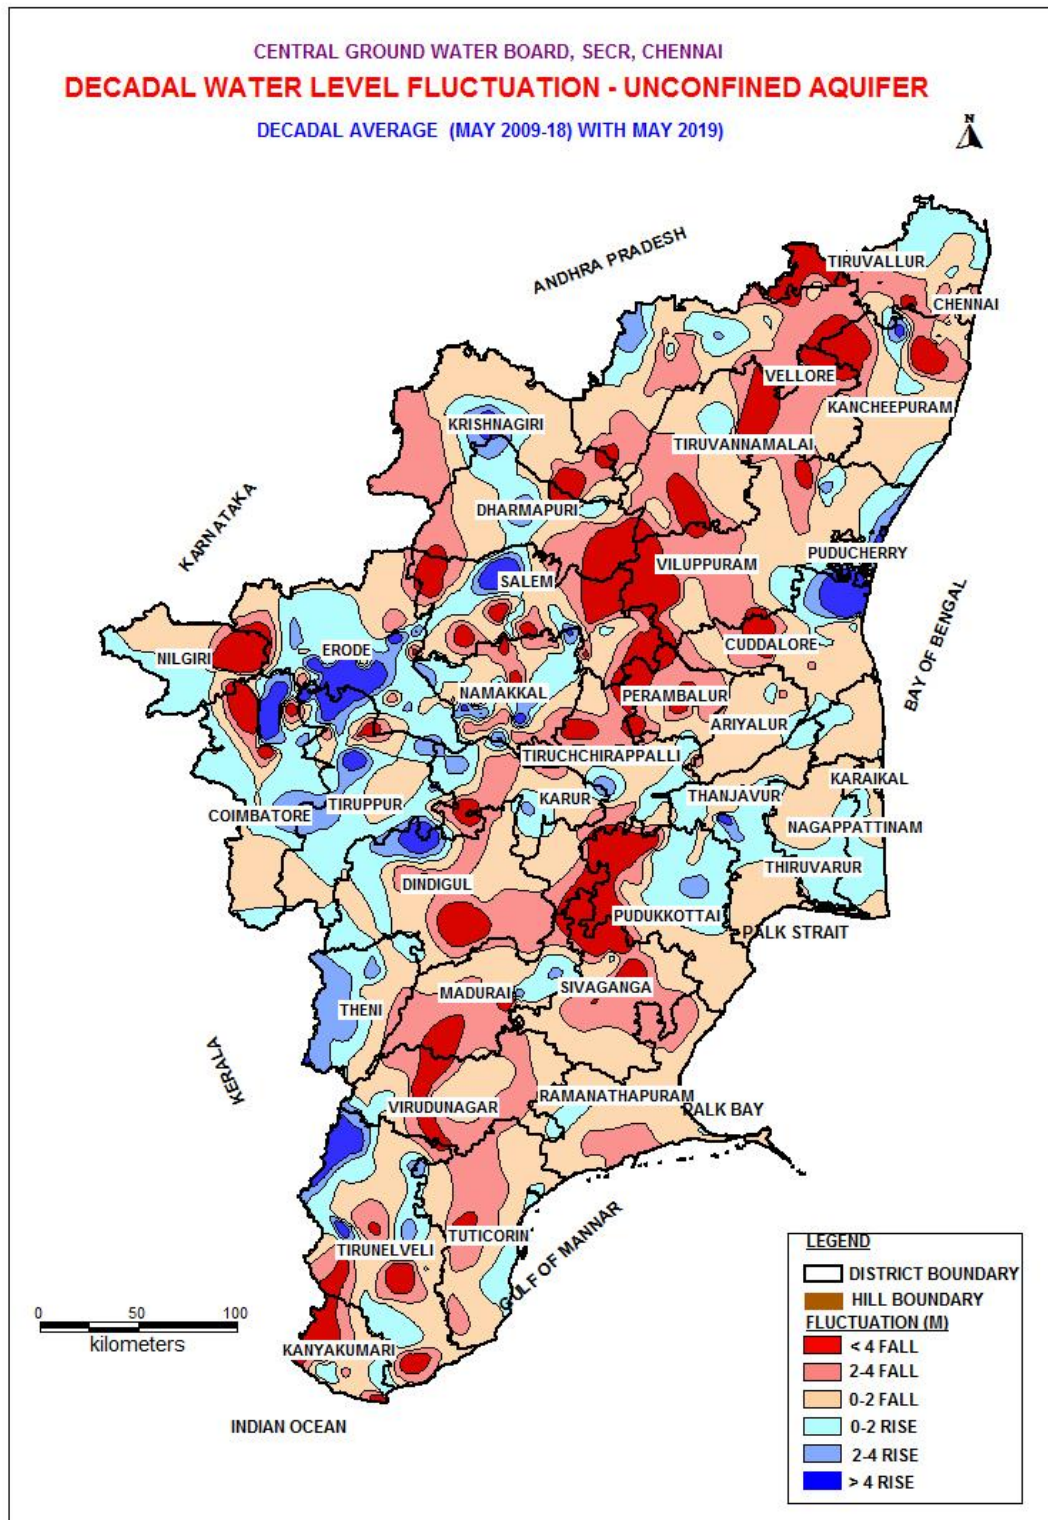

Figure 12: Decadal Water level fluctuation May 2009-18 with May 2019

Confined Aquifer

The Piezometric surface data of May 2019 were compared with mean water level for the period May 2009-2018. The district-wise distribution of Ground water monitoring wells falling in different ranges of water level fluctuation is presented in **Table 23**. A comparison of water level shows a rise in 33% and a fall in 67% of the wells. While rise is more in 0-2 m range the fall is mainly in >4 m range.

1. The entire state have recorded fall in more than 50% wells except Erode, Kanyakumari, and Theni districts of state.
2. Rise in the Piezometric head in the range of 0-2m has been observed in 15% of wells predominantly in Coimbatore, Erode, Madurai, and Theni districts.
3. Rise in the water level in the range of 2-4 m has been observed in 7% of wells analysed and noted mainly in Erode and Theni districts.
4. Rise in water level more than 4 m has been observed in 12% of wells analysed and noted in Coimbatore, Cuddalore and Erode districts.
5. The fall in water level in the range of 0-2m has been observed in 22% of wells analysed and noted in Erode, Kancheepuram, Madurai and Tirunelveli districts.
6. The fall in water level in the range of 2-4m has been observed in 13% of wells analysed and noted in Coimbatore, Cuddalore and Dindigul districts.
7. Fall in water level more than 4 m has been observed in 32% of wells analysed and noted mostly Ariyalur, Coimbatore, Cuddalore, Madurai and Theni districts of the state and Puducherry region of UT of Puducherry.

Mean Water Levels For The Period August 2009-2018 & August 2019

The statement showing the distribution of ground water monitoring wells falling in different ranges of fluctuation is presented in **Table 24** and **Figure 13**. A comparison of water level shows that a rise in the water level is recorded in 40% of wells analysed, while 60% recorded fall. Salient features of the comparison of water levels are given below. The rise is mainly in 0-2 m range and the fall is also in the same range.

1. The entire state have recorded fall in more than 50% wells except Coimbatore, Kanyakumari, Madurai and Tiruppur districts of the state.
2. Rise in the water level in the range of 0-2m has been observed in 26% of wells analysed, noted all over the State except Karaikal region of U.T. of Puducherry.
3. Rise in the water level of 2 to 4 m has been observed in 8% and of wells analysed and noted mainly in Coimbatore, Erode, Madurai, Namakkal, Tirunelveli, Tiruppur and Villupuram districts.
4. Rise in the water level more than 4 m has been observed in 5% of wells analysed and noted mainly in Coimbatore and Erode districts.
5. The fall in water level in the range of 0-2m has been observed in 34% of wells analysed and spread all over the State and U.T. of Puducherry, except Tiruvarur district.
6. The fall in water level in the range of 2-4m has been observed in 16% of wells analysed and noted all over the state except Nagapattinam, Sivaganga and Thanjavur districts of state and entire UT of Puducherry.
7. The fall in water level more than 4 m has been observed in 11% of wells analysed and noted mainly in as isolated pockets in Coimbatore, Erode, Namakkal, Salem and Vellore districts.

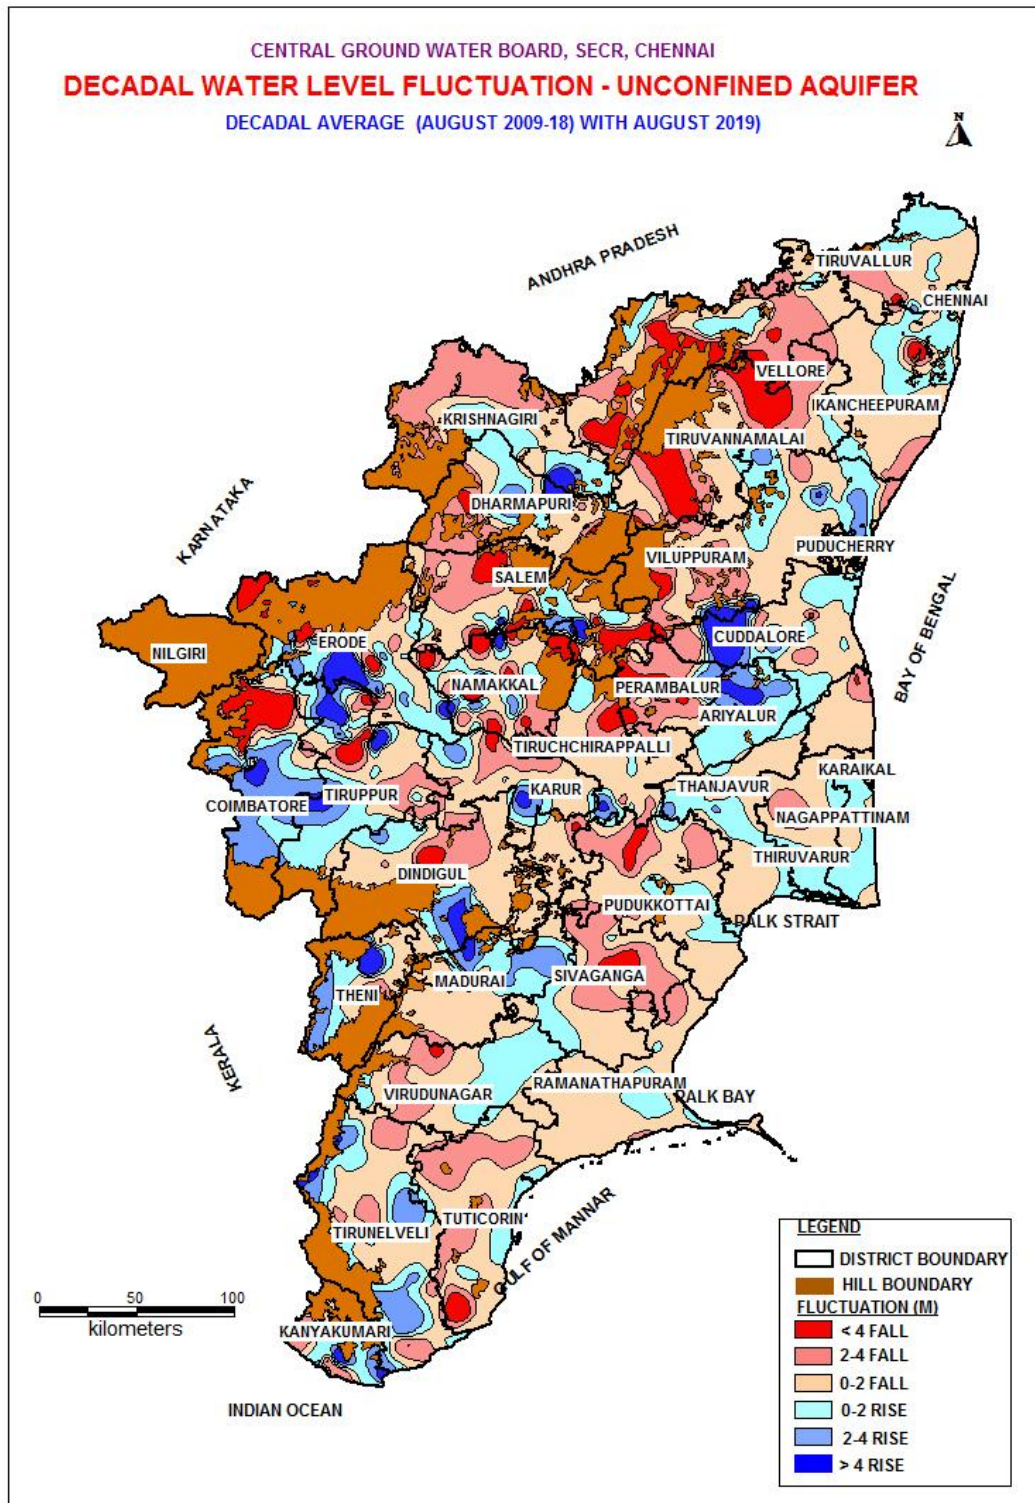

Figure 13: Decadal Water Level Fluctuation August 2009-18 with August 2019

Confined Aquifer

The Piezometric surface data of August 2019 were compared with mean water level for the period August 2009-2018. The district-wise distribution of Ground water monitoring wells falling in different ranges of water level fluctuation is presented in **Table 25**. A comparison of water level shows a rise in 38% and a fall in 62% of the wells. While rise is more in 0-2 m range the fall is mainly in >4 m range.

1. The entire state have recorded fall in more than 50% wells except Chennai, Kanyakumari, Madurai, Theni, and Tiruppur districts of the state and other districts viz., Nilgiris, Thanjavur, Tiruvarur, Trichy and Tiruvallur districts of the state and Karaikal region of UT of Puducherry where no representative monitoring wells tapping deeper aquifers exist.
2. Rise in the water level in the range of 0-2m has been observed in 19% of wells analysed, spread all over the State, except Dharmapuri, Krishnagiri, Nagapattinam, Pudukottai, Ramanathapuram, Sivaganga and Vellore districts.
3. Rise in the water level in the range of 2-4 m has been observed in 8% of wells analysed and noted mainly Coimbatore, Madurai, Theni and Tirunelveli districts.
4. Rise in water level more than 4 m has been observed in 11% of wells analysed and noted mainly in Coimbatore and Cuddalore districts.
5. The fall in water level in the range of 0-2m has been observed in 21% of wells analysed and noted in Coimbatore, Cuddalore, Dindigul, Erode, Madurai, Tirunelveli and Tuticorin districts.
6. The fall in water level in the range of 2-4m has been observed in 15% of wells analysed and noted in Coimbatore, Cuddalore, Erode, Namakkal and Theni districts.
7. Fall in water level more than 4 m has been observed in 26% of wells analysed and noted mostly Ariyalur, Coimbatore, Cuddalore, Erode, Krishnagiri and Theni districts of the state and Puducherry region of UT of Puducherry.

Mean Water Levels For The Period November 2009-2018 & November 2019

The statement showing the distribution of ground water monitoring wells falling in different ranges of fluctuation is presented in **Table 26** and **Figure 14**. A comparison of water level shows that a rise in the water level is recorded in 81% of wells analysed, while 19% recorded fall. Salient features of the comparison of water levels are given below. The rise is mainly in 0-2 m range and the fall is also in the same range.

1. The entire state of Tamilnadu and UT of Puducherry have recorded rise in more than 50% wells.
2. Rise in the water level in the range of 0-2m has been observed in 36% of wells analysed, noted all over the State and U.T. of Puducherry except Ariyalur and Chennai districts.
3. Rise in the water level of 2 to 4 m has been observed in 26% and of wells analysed and noted all over the State except Ariyalur, Chennai, Coimbatore, Vellore and Virudunagar districts and U.T. of Puducherry.
4. Rise in the water level more than 4 m has been observed in 19% and of wells analysed and noted mainly in Coimbatore, Cuddalore, Dharmapuri, Dindigul, Erode, Kancheepuram, Kanyakumari, Karur, Krishnagiri, Madurai, Namakkal, Ramanathapuram and Salem districts.
5. The fall in water level in the range of 0-2m has been observed in 14% of wells analysed and spread all over the State except Ariyalur, Chennai and Dharmapuri districts and U.T. of Puducherry.
6. The fall in water level in the range of 2-4m has been observed in 3% of wells analysed and noted mainly in Cuddalore, Dindigul and Erode Sivaganga districts and U.T. of Puducherry.
7. The fall in water level more than 4 m has been observed in 3% of wells analysed and noted as isolated pockets mainly in Cuddalore, Erode and Madurai districts.

Mean Water Levels For The Period January 2010-2019 & January 2020:

The distribution of hydrograph network stations falling in different ranges of fluctuation is presented in **Table 27** and **Figure 15**. A comparison of water levels shows that a rise in the water level is recorded in 72% of wells analysed, while 38 % recorded fall. While rise is more in 0-2 m range the fall is also in the same range.

1. The entire state of Tamilnadu and UT of Puducherry have recorded rise in more than 50% wells.
2. Rise in the water level in the range of 0-2m has been observed in 40% of wells analysed, noted all over the State and UT of Puducherry.
3. Rise in the water level of 2 to 4 m has been observed in 16% and of wells analysed and noted all over the state except Chennai, Karur, Nilgiris, Sivaganga and Tiruvarur districts of Tamilnadu and UT of Puducherry.
4. Rise in the water level more then 4 m has been observed in 16% and of wells analysed and noted all over the state except Nilgiris, district of Tamilnadu and UT of Puducherry.
5. The fall in water level in the range of 0-2m has been observed in 21% of wells analysed and spread all over the State and U.T. of Puducherry.
6. The fall in water level in the range of 2-4m has been observed in 5% of wells analysed and noted mainly Coimbatore, Cuddalore, Dindigul, Erode, Sivaganga, Tiruchirapalli, Vellore and Villupuram districts.
7. The fall in water level more than 4 m has been observed in 2% of wells analysed and noted as isolated pockets mainly Erode, Madurai, Pudukottai and Tiruchirapalli districts.

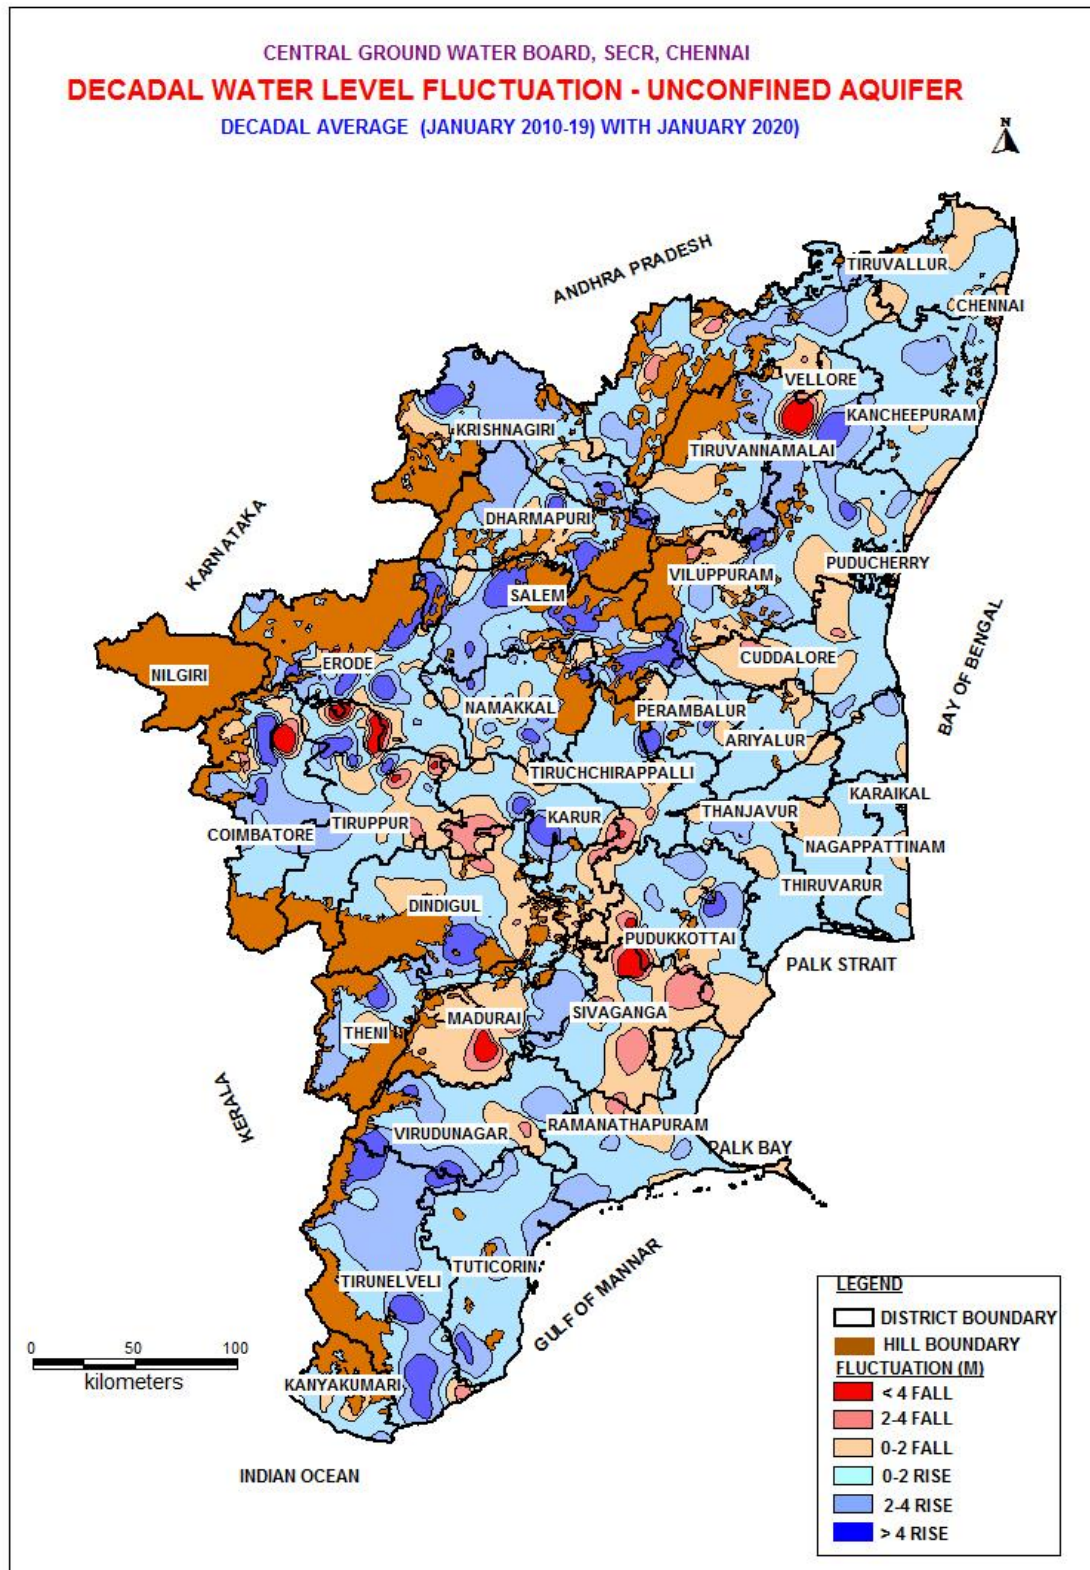

Figure 15: Decadal Water level fluctuation January 2010-19 with January 2020

Confined Aquifer

The Piezometric surface data of January 2020 were compared with mean water level for the period January 2010-2019. The district-wise distribution of Ground water monitoring wells falling in different ranges of water level fluctuation is presented in **Table 28**. A comparison

of water level shows a rise in 64% and a fall in 36% of the wells. While rise is more in 0-2 m range the fall is mainly in >4 m range.

1. The entire state have recorded rise in more than 50% wells except Ariyalur, Kanyakumari and Krishnagiri districts of the state and Puducherry region of UT of Puducherry and other districts viz., Nilgiris, Thanjavur, Tiruvarur, Trichy and Tiruvallur districts of the state and Karaikal region of UT of Puducherry where no representative monitoring wells tapping deeper aquifers exist.
2. Rise in the water level in the range of 0-2m has been observed in 29% of wells analysed, spread all over the State, predominantly in Coimbatore, Cuddalore, Dindigul, Erode, Karur, Madurai, Namakkal, Theni, Tirubnelveli, and Tuticorin districts.
3. Rise in the water level in the range of 2-4 m has been observed in 14% of wells analysed and noted mainly Coimbatore, Madurai and Theni districts.
4. Rise in water level more than 4 m has been observed in 21% of wells analysed and noted in Coimbatore, Cuddalore, Salem and Tirunelveli districts.
5. The fall in water level in the range of 0-2m has been observed in 14% of wells analysed and noted in Cuddalore, Erode, Madurai and Theni districts.
6. The fall in water level in the range of 2-4m has been observed in 6% of wells analysed and noted mainly in Cuddalore.
7. Fall in water level more than 4 m has been observed in 16% of wells analysed and noted mostly Ariyalur and Cuddalore and Erode districts and Puducherry region of UT of Puducherry.

Annual Fluctuation

Annual fluctuation of water level is calculated by comparing the water level of the particular period during last year with water level of the same period of current year. This indicates the impact of ground water development and ground water recharge during one year. Positive fluctuation indicates improved recharge over and above ground water development and negative fluctuation indicates increased ground water development over and above the recharge.

Water Levels For The Period May 2018& May 2019

The water level data for May 2019 were compared with water level for the period May 2018. The district-wise distribution of Ground water monitoring wells falling in different ranges of water level fluctuation is presented in **Table 29** and **Figure 16**. A comparison of water level shows a rise in 33% and a fall in 67% of the wells. Both the rise and fall are mainly in 0-2 m range.

1. The entire state and UT of Puducherry have recorded fall in more than 50% wells except Madurai, Nagapattinam, Nilgiris, Pudukottai, Thanjavur, and Theni districts of the state.
2. Rise in the water level in the range of 0-2m has been observed in 22% of wells analysed, and found all over the state of Tamilnadu except Perambalur, Sivaganga, and Puducherry region of UT of Puducherry.
3. Rise in the water level in the range of 2-4 m has been observed in 6% of wells analysed and found particularly in Erode, Madurai, Salem, Theni, and Tiruchirapalli districts.
4. Rise in water level more than 4 m has been observed in 5% of wells analysed and noted as small scattered patches mainly in Erode, Namakkal, Salem, Tirunelveli and Tiruppur districts.
5. The fall in water level in the range of 0-2m has been observed in 39% of wells analysed and noted all over the state and U.T. of Puducherry except Tiruvarur district.
6. The fall in water level in the range of 2-4m has been observed in 15% of wells analysed and found small scattered patches all over the state except in Kanyakumari, Nagapattinam, Nilgiris, Thanjavur, Theni and Tiruvarur districts and UT of Puducherry.
7. Fall in water level of more than 4 m has been observed in 13% of wells analysed and found small scattered patches in Coimbatore, Dharmapuri, Erode, Kancheepuram, Namakkal, Perambalur, Salem, Tiruvannamalai and Vellore districts.

CENTRAL GROUND WATER BOARD, SECR, CHENNAI
ANNUAL WATER LEVEL FLUCTUATION - UN CONFINED AQUIFER
 MAY -18 - MAY 2019

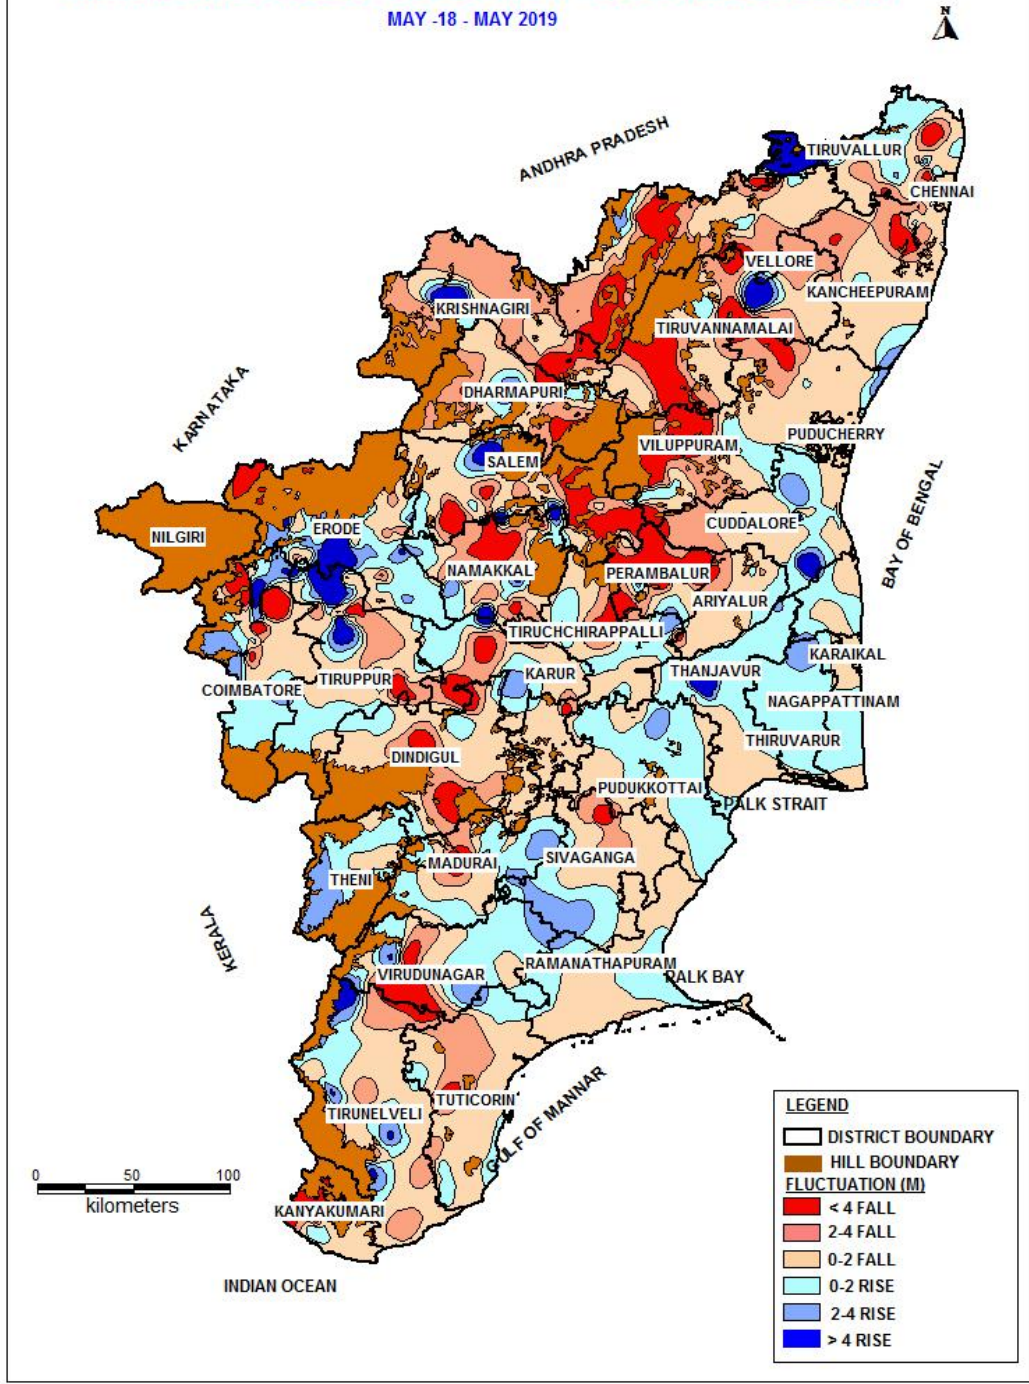

Figure 16: Annual Water level fluctuation (May 2018 –May 2019)

Confined Aquifer

The Piezometric surface data of May 2019 were compared with that of May 2018. The district-wise distribution of Ground water monitoring wells falling in different ranges of water level fluctuation is presented in **Table 30**. A comparison of water level shows a fall in 66% and a rise in 34% of the wells. Both rise and fall is more in 0-2 m range.

1. The entire state have recorded fall in more than 50% wells except Coimbatore, Erode, Kanyakumari, Madurai and Theni districts of the state and Puducherry region and other districts viz., Nilgiris, Thanjavur, Tiruvarur, Trichy and Tiruvallur districts of the state and Karaikal region of UT of Puducherry where no representative monitoring wells tapping deeper aquifers exist.
2. Rise in the water level in the range of 0-2m has been observed in 13% of wells analysed, spread all over the State, predominantly in Coimbatore, Cuddalore, Dindigul, Erode, Karur, Madurai and Theni districts.
3. Rise in the water level in the range of 2-4 m has been observed in 9% of wells analysed and noted mainly in Coimbatore, Erode, Madurai and Theni districts.
4. Rise in water level more than 4 m has been observed in 13% of wells analysed and noted in Coimbatore, Cuddalore, Erode and Theni districts.
5. The fall in water level in the range of 0-2m has been observed in 33% of wells analysed and noted all over the state and Puducherry region of UT of Puducherry except, Dharmapuri, Kanyakumari, Nagapattinam, Tiruvallur and Tiruvannamalai districts.
6. The fall in water level in the range of 2-4m has been observed in 13% of wells analysed and noted mainly in Coimbatore, Cuddalore, Dindigul, Krishnagiri and Tirunelveli districts.
7. Fall in water level more than 4 m has been observed in 20% of wells analysed and noted mostly in Coimbatore, Cuddalore, Dindigul, Kancheepuram, Krishnagiri, Salem, Tiruvannamalai and Vellore districts.

Water Levels for the Period August 2018 & August 2019

The water level data for August 2019 were compared with water level for the period August 2018. The district-wise distribution of Ground water monitoring wells falling in different ranges of water level fluctuation is presented in **Table 31** and **Figure 17**. A comparison of water level shows a rise in 36% and a fall in 64% of the wells. Both the rise and fall is mainly in 0-2 m range.

1. The entire state and UT of Puducherry have recorded fall in more than 50% wells except Ariyalur, Cuddalore, Kanyakumari, Thanjavur and Tiruvarur districts of the state.
2. Rise in the water level in the range of 0-2m has been observed in 25% of wells analysed, and found all over the state and Puducherry region of UT of Puducherry except Sivaganga district.
3. Rise in the water level in the range of 2-4 m has been observed in 5% of wells analysed and found mainly in Coimbatore, Erode, Kanyakumari and Villupuram districts.
4. Rise in water level more than 4 m has been observed in 5% of wells analysed and noted all over the state mainly in Coimbatore, Cuddalore, Dharmapuri, Erode, and Villupurami districts.
5. The fall in water level in the range of 0-2m has been observed in 39% of wells analysed and noted all over the state as isolated patches except Ariyalur.
6. The fall in water level in the range of 2-4m has been observed in 15% of wells analysed and noted as isolated patches in Ariyalur, Nagapattinam, Nilgiris, Perambalur, Thanjavur, Tiruvarur, and Tiruppur districts and UT of Puducherry.
7. Fall in water level more than 4 m has been observed in 10% of wells analysed and noted isolated patches in Erode, Namakkal, Salem and Vellore districts.

Water Levels for the Period November 2018 & November 2019

The water level data for November 2019 were compared with water level for the period November 2018. The district-wise distribution of Ground water monitoring wells falling in different ranges of water level fluctuation is presented in **Table 33** and **Figure 18**. A comparison of water level shows a rise in 72% and a fall in 28% of the wells. Both the rise and fall is mainly in 0-2 m range.

1. The entire state and UT of Puducherry have recorded rise in more than 50% wells except Ariyalur, Madurai, Theni, and Tiruppur districts of the state.
2. Rise in the water level in the range of 0-2m has been observed in 41% of wells analysed, and found all over the state and UT of Puducherry.
3. Rise in the water level in the range of 2-4 m has been observed in 18% of wells analysed and found all over the state except Madurai, Nagapattinam, Theni, Tiruvarurdistricts and UT of Puducherry.
4. Rise in water level more than 4 m has been observed in 13% of wells analysed and noted all over the state except in Ariyalur, Chennai, Cuddalore, Nilgiris, Theni, Tiruvarur, and Tiruppur districts and UT of Puducherry.
5. The fall in water level in the range of 0-2m has been observed in 21% of wells analysed and noted all over the state as isolated disconnected patches except in Tiruvarur district and Puducherry region of UT of Puducherry.
6. The fall in water level in the range of 2-4m has been observed in 4% of wells analysed and noted as isolated patches in some districts mainly in Erode, Namakkal, Theni, Vellore and villupuram districts.
7. Fall in water level more than 4 m has been observed in 3% of wells analysed and noted isolated patches in some districts particularly Dindigul, Erode, Madurai and Vellore districts.

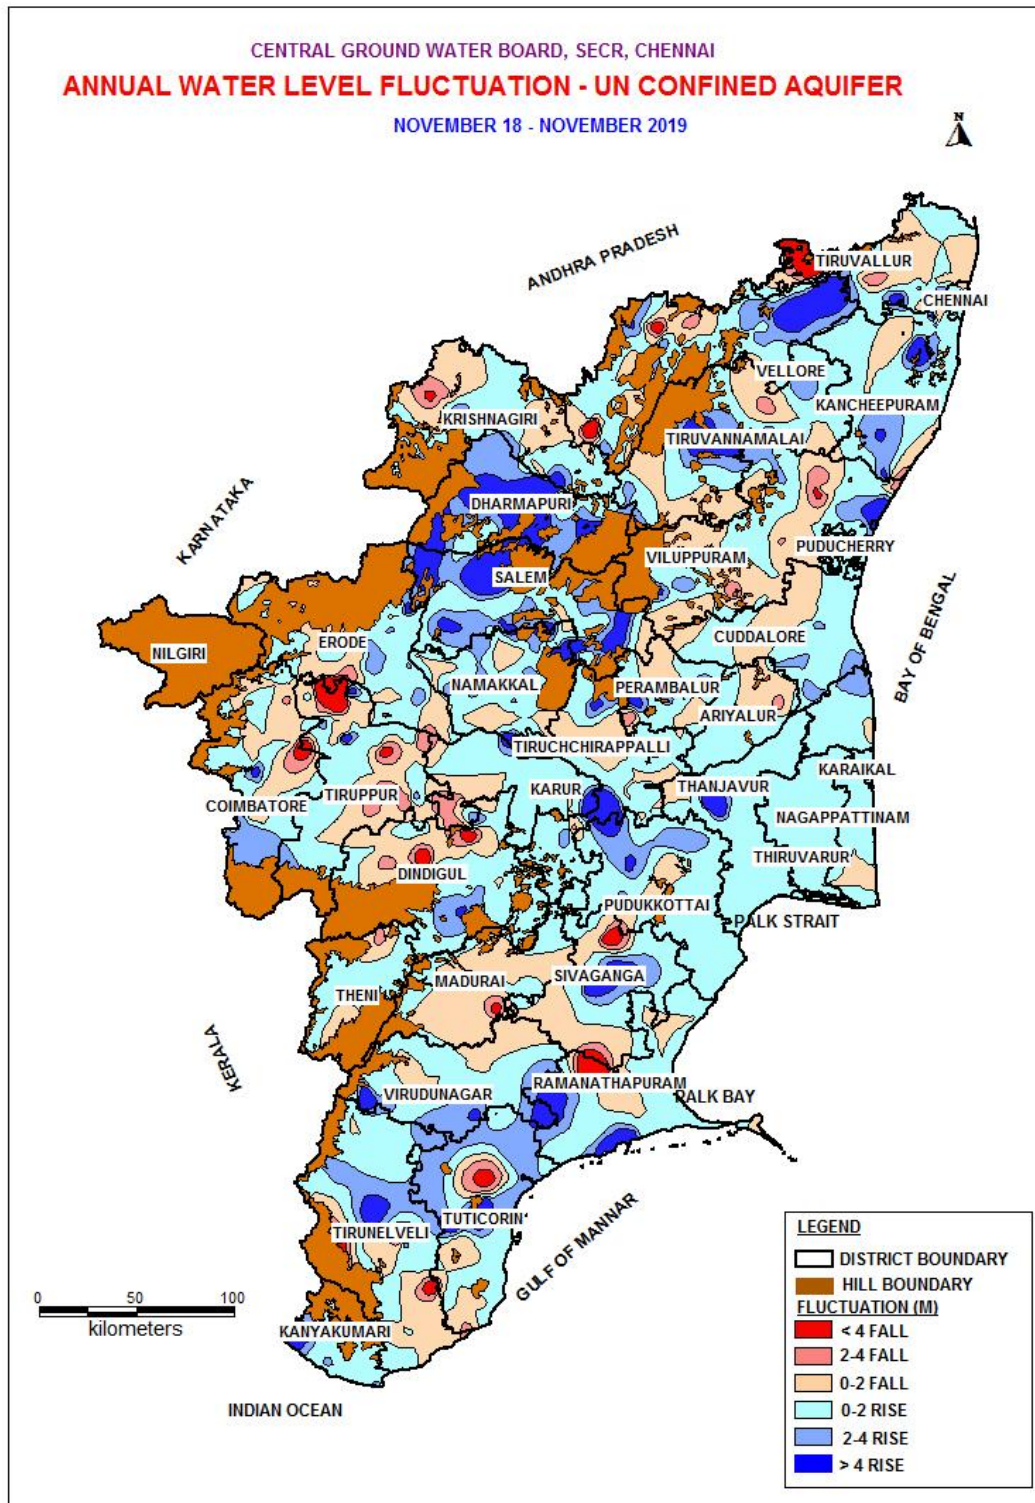

Figure 18: Annual water level fluctuation November 2018- November 2019

Confined Aquifer

The Piezometric surface data of November 2019 were compared with that of November 2018. The district-wise distribution of Ground water monitoring wells falling in different ranges of water level fluctuation is presented in **Table 34**. A comparison of water level shows a rise in 62% and a fall in 38% of the wells. Both the rise and fall is mainly in 0-2 m

1. The entire state have recorded rise in more than 50% wells except Ariyalur, Cuddalore, Erode, Madurai and Theni districts of the state and Puducherry region and other districts viz., Nilgiris, Thanjavur, Tiruvarur, Trichy and Tiruvallur districts of the state and Karaikal region of UT of Puducherry where no representative monitoring wells tapping deeper aquifers exist.
2. Rise in the water level in the range of 0-2m has been observed in 29% of wells analysed, spread all over the State, predominantly in Coimbatore, , Dindigul, Erode, Kancheepuram, Karur, Madurai, Namakkal, Salem, Sivaganga, Tirunelveli, Tiruppur and Tiruvannamalai districts.
3. Rise in the water level in the range of 2-4 m has been observed in 15% of wells analysed and noted mainly in Coimbatore, Cuddalore, Madurai, Tirunelveli, Vellore and Villupuram districts.
4. Rise in water level more than 4 m has been observed in 18% of wells analysed and noted in Coimbatore, Dharmapuri, Kanyakumari, Salem, Theni and Tiruvannamalai districts.
5. The fall in water level in the range of 0-2m has been observed in 18% of wells analysed and noted in Cuddalore, Erode, Madurai and Theni districts and Puducherry region of UT of Puducherry.
6. The fall in water level in the range of 2-4m has been observed in 9% of wells analysed and noted in Ariyalur, Madurai and Theni districts.
7. Fall in water level more than 4 m has been observed in 12% of wells analysed and noted mostly in Ariyalur, Coimbatore, Cuddalore, Erode, Madurai and Theni districts.

Water Levels for The Period January 2019 & January 2020

The water level data for January 2020 were compared with water level for the period January 2019. The district-wise distribution of Ground water monitoring wells falling in different ranges of water level fluctuation is presented in **Table 35** and **Figure 19**. A comparison of water level shows a rise in 58% and a fall in 42% of the wells. Both the rise and fall is mainly in 0-2 m range.

1. The entire state and UT of Puducherry have recorded rise in more than 50% wells except Coimbatore and Erode districts of the state.
2. Rise in the water level in the range of 0-2m has been observed in 33% of wells analysed, and found all over the state and UT of Puducherry.
3. Rise in the water level in the range of 2-4 m has been observed in 13% of wells analysed and found all over the state except Ariyalur, Cuddalore, Karur, Nagapattinam and Sivaganga and districts UT of Puducherry.
4. Rise in water level more than 4 m has been observed in 12% of wells analysed and noted all over the state mainly in Coimbatore, Dhatrmapuri, Erode, Kancheepuram, Krishnagiri, Namakkal, Perambalur, Pudukottai, Salem, Tirunelveli, Tiruvallur, Vellore and Villupuram districts.
5. The fall in water level in the range of 0-2m has been observed in 16% of wells analysed and noted all over the state as isolated disconnected patches except in Kancheepuram, Perambalur, Tiruvarur districts and Karaikal region of UT of Puducherry.
6. The fall in water level in the range of 2-4m has been observed in 3% of wells analysed and noted as isolated patches in some districts particularly Dindigul, Erode, Karur, and Vellore districts.
7. Fall in water level more than 4 m has been observed in 2% of wells analysed and noted isolated patches in some districts mainly in Erode district.

CENTRAL GROUND WATER BOARD, SECR, CHENNAI
ANNUAL WATER LEVEL FLUCTUATION - UN CONFINED AQUIFER
 JANUARY 2019- JANUARY 2020

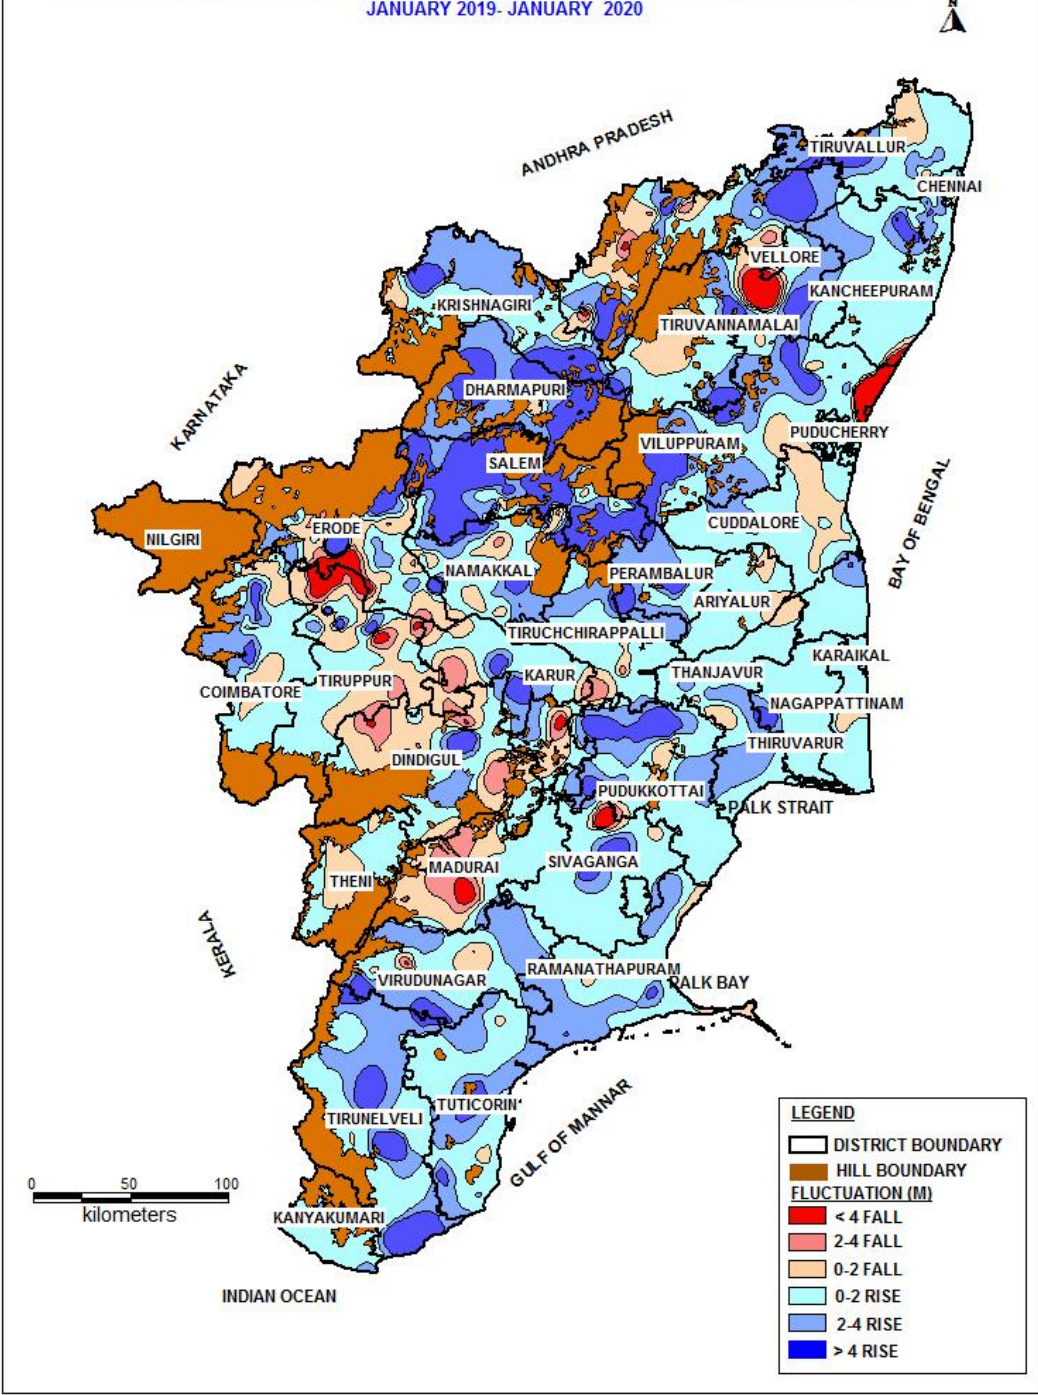

Figure 19: Annual water level fluctuation January 2018- January 2019

Confined Aquifer

The Piezometric surface data of January 2020 were compared with that of January 2019. The district-wise distribution of Ground water monitoring wells falling in different ranges of water level fluctuation is presented in **Table 36**. A comparison of water level shows a rise in 53% and a fall in 47% of the wells. Both the rise and fall is mainly in 0-2 m range.

1. The entire state have recorded rise in more than 50% wells except Ariyalur, Cuddalore, Erode, Namakkal, Theni, Villupuram and Virudunagar districts of the state and Puducherry region and other districts viz., Nilgiris, Thanjavur, Tiruvarur, Trichy and Tiruvallur districts of the state and Karaikal region of UT of Puducherry where no representative monitoring wells tapping deeper aquifers exist.
2. Rise in the water level in the range of 0-2m has been observed in 26% of wells analysed, spread all over the State, predominantly in Coimbatore, Cuddalore, Dindigul, Erode, Kancheepuram, Madurai, Theni, Tirunelveli, Tiruppur and Tuticorin districts.
3. Rise in the water level in the range of 2-4 m has been observed in 11% of wells analysed and noted mainly in Coimbatore, Cuddalore, Dindigul, Madurai and Tirunelveli districts.
4. Rise in water level more than 4 m has been observed in 16% of wells analysed and noted in Ariyalur, Coimbatore, Cuddalore, Madurai and Salem districts.
5. The fall in water level in the range of 0-2m has been observed in 20% of wells analysed and noted in Ariyalur, Coimbatore, Cuddalore, Erode, Madurai and Theni districts and Puducherry region of UT of Puducherry.
6. The fall in water level in the range of 2-4m has been observed in 5% of wells analysed and noted in some districts particularly, Madurai district.
7. Fall in water level more than 4 m has been observed in 12% of wells analysed and noted mostly Coimbatore, Cuddalore, Erode and Theni districts.

S.No	District	Water level fluctuation						No of wells recorded rise	No of wells recorded fall

LONG TERM WATERLEVEL TREND

AREA SHOWING SIGNIFICANT DECLINE (0.1 M /YR) IN WATER LEVEL

Area showing significant decline (> 0.1 m /yr) in water level during pre monsoon period (may 2010-may 2019) is analysed. Falling trend is recorded in 75% percent of shallow wells spreaded all over the state. 1.6% have recorded decline of >0.1 m/year. The location of groundwater monitoring wells showing significant decline (>0.1 m/year) during the pre monsoon period is furnished in the **Table 37**.The long term water level trend of premonsoon is presented in **Figure 20**. Rise of < 0.1 m/year is recorded only in two wells, one in dharmapuri and one in erode district.

The significant decline in ground water levels in dug well during post monsoon (Jan 2011 – Jan 2020) is noticed in almost entire state (64% of wells analysed) and the details of wells showing significant decline (>0.1 m/year) found in 1.86% of wells. The location of groundwater monitoring wells showing significant decline (>0.1 m/year) during the post-monsoon period is furnished in the **Table 38**. The long term water level trend of premonsoon is presented in **Figure 21**. Rise of < 0.1 m/year is recorded in 1% also recorded as scattered patches spreaded in all the districts.

Table 37. Significant trend of fall (>0.1 m/yr) during pre monsoon water levels in phreatic aquifer (May 2010- May 2019)

IV. HYDROCHEMISTRY

The quality of shallow ground water in Tamil Nadu state has been evaluated by sampling and analysis of water sample collected from Ground Water Monitoring wells. About 560 Ground Water Monitoring wells were monitored for water quality during May 2018 representing pre-monsoon water quality. The district wise chemical analysis data of the samples are given in the **Annexure-III**. The summarized results of ground water quality ranges are given in **Table 39**.

Table 39: Ground water quality of Tamilnadu and UT of Puducherry, during May-2018

S.No	Parameters	Range	No. Of sample	Percentage
1	Electrical Conductivity $\mu\text{s/cm}$ at 25°C	< 750	114	14
		751- 2250	478	57
		2251- 3000	118	14
		> 3000	126	15
2	Chloride mg/l	< 250	494	59
		251-1000	301	36
		> 1000	41	5
3	Fluoride mg/l	< 1.0	452	54
		1.1- 1.5	276	33
		>1.5	108	13
4	Nitrate mg/l	<45	425	51
		> 45	411	49

Electrical Conductivity

Distribution of electrical conductivity is shown in **Figure 22**. In general the ground water quality in the state is fresh in about 14 % of the Ground Water Monitoring wells as indicated by the EC value less than 750 $\mu\text{s/cm}$ at 25°C. In about 57 % of the Ground Water Monitoring wells, the EC varies between 751 -2250 $\mu\text{s/cm}$ at 25° C and 14 % of Ground Water Monitoring wells are between 2251-3000 $\mu\text{s/cm}$ at 25° C indicating that the ground water is slightly mineralized and about 15 % of Ground Water Monitoring wells the EC is more than 3000 $\mu\text{s/cm}$ at 25°C indicating that the ground water is highly mineralized. The highest value of 14270 $\mu\text{s/cm}$ at 25° C was observed in THONDI , Ramanathapuram district. The details of well showing EC more than 3000 $\mu\text{s/cm}$ at 25° C is given in **Table 40**.

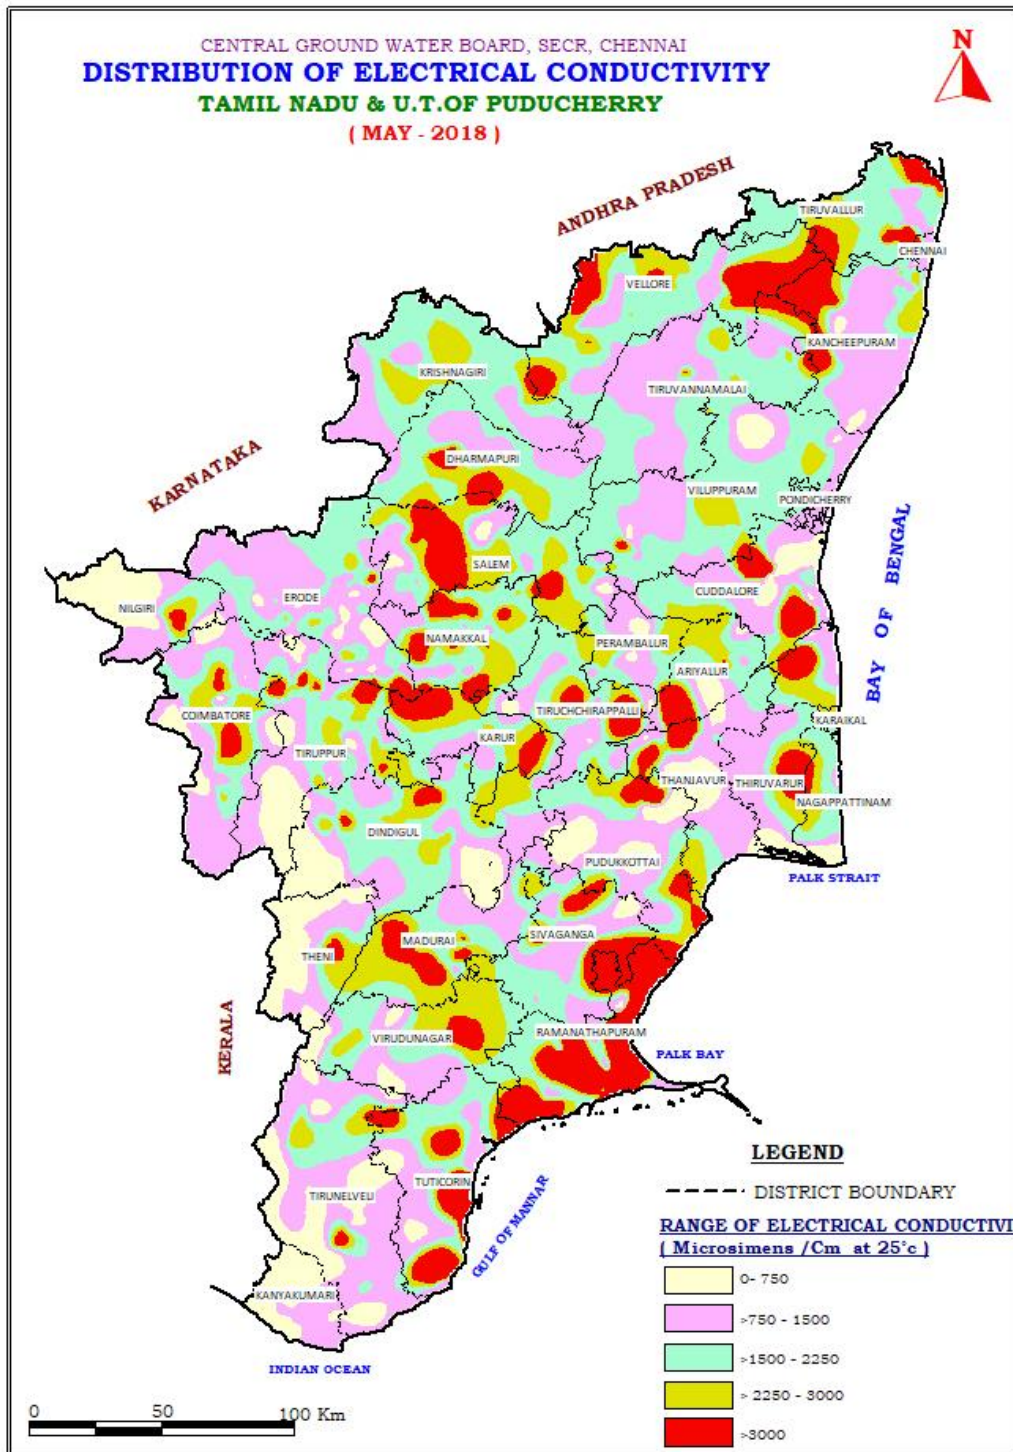

Figure 22: Distribution of Electrical Conductivity

Chloride

Distribution of Chloride is shown in **Figure 23**. The chloride content is less than 250 mg/l in about 59 % of the sample analyzed and 36 % of the sample are between 251 – 1000 mg/l and 5 % shows more than 1000mg/l which are from the districts of Salem, Tiruvallur, Tuticorin, Tirupur, Vellore, Villupuram and Virudhunagar. The highest value of 4324.9 mg/l was observed in THONDI , Ramanathapuram district. The details of wells showing chloride more than 1000 mg/l are given in **Table 41**.

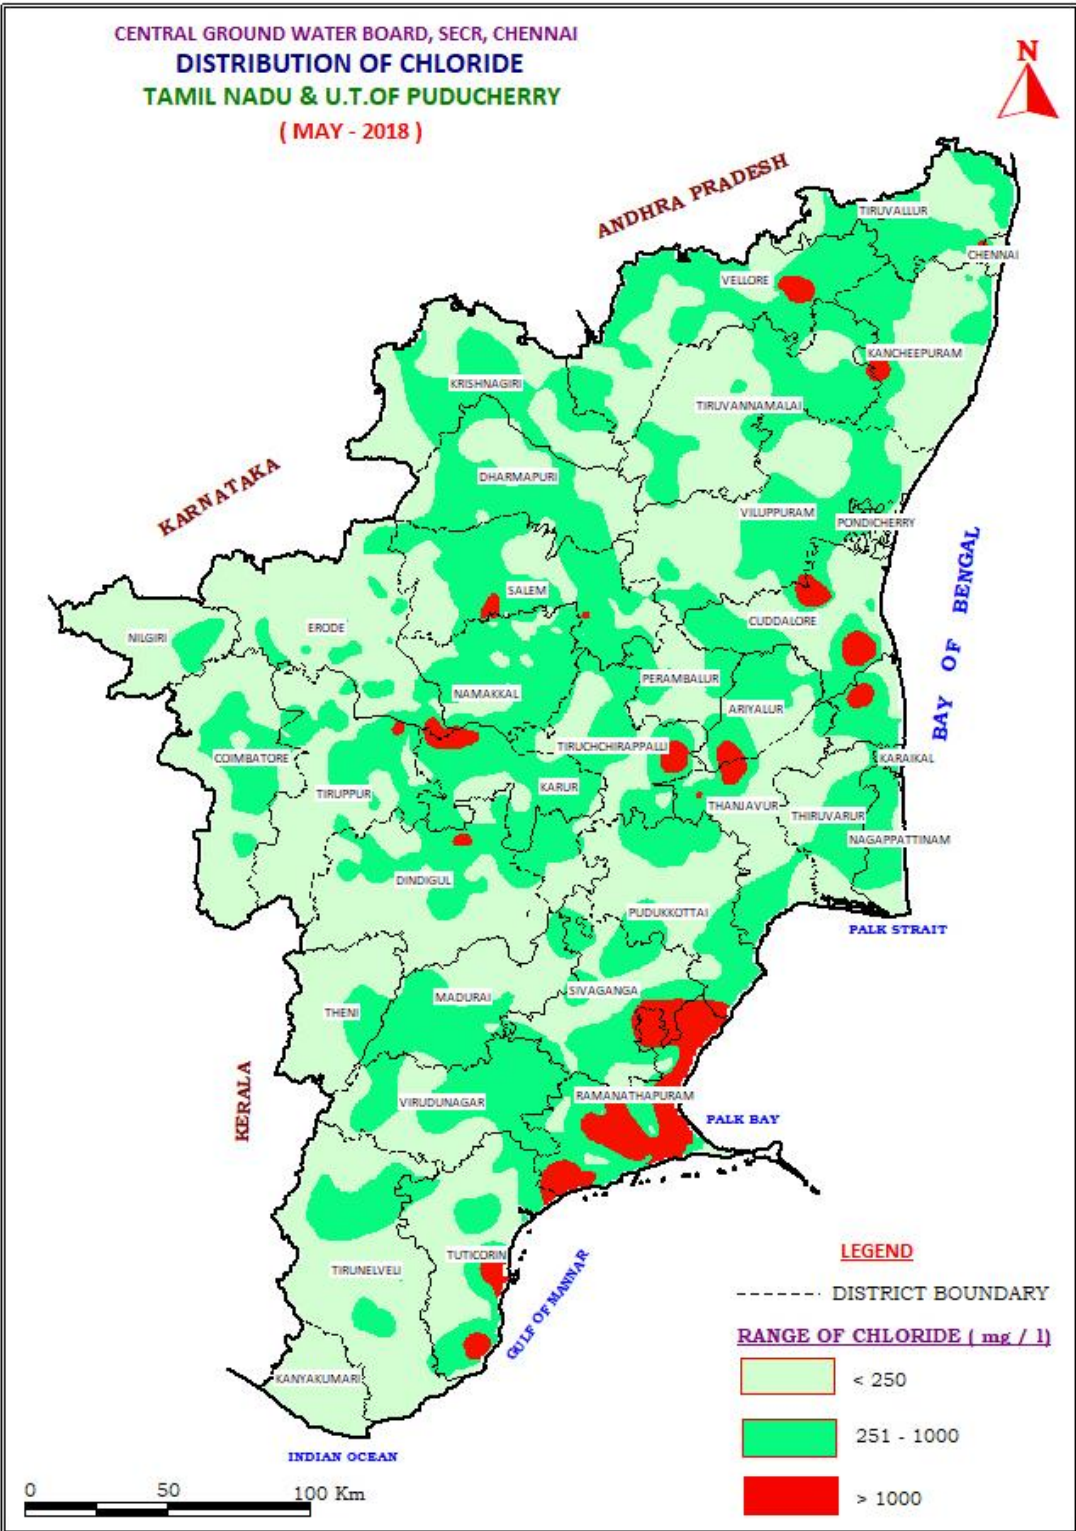

Figure 23: Distribution of Chloride

Nitrate (NO₃)

Distribution of Nitrate is shown in **Figure 24**. The Nitrate content is less than 45mg/l in about 51 % of the sample analyzed and 49 % of sample shows more than 45 mg/l spreaded all over the state except Tiruvarur district. The details of well shows nitrate more than 45 mg/l is given in **Table 42**.

V. CONCLUSIONS

The behaviour of ground water table during May 2019 to January 2020 in Tamil Nadu State and Puducherry and Karaikal regions of U.T of Puducherry has been studied by monitoring the dug wells tapping phreatic aquifers. The data on water levels was analysed in detail and salient features are as under.

1. The depth to water level recorded during Premonsoon (May 2019) varied from 0.6 to 50.0 m bgl.72% of wells have recorded depth to water level within 10 m bgl during premonsoon period (May 2019), whereas during post-monsoon period (January 2020), about 86% of wells recorded water levels less than 10 m bgl.The depth to water level recorded during Postmonsoon (January 2020) varied from 0.25 to 50.91 m bgl.
2. The piezometric surface ranged from 0.95 m to 111.77 m bgl. 34% of wells have recorded depth to piezometric surface within 10 mbglduring premonsoon period (May 2019), whereas during post-monsoon period (January 2019), the piezometric surface ranged from 3.95 m to 111.44 m bgl. 50% of wells have recorded depth to piezometric surface within 10 mbgl.
3. 70% of wells have recorded depth to water level within 10m bgl during August 2019 and 88% during November2019.35% of Piezometers have have recorded Piezometric surface in the range of <10 m bgl during August 2019whereas during November 2019, about 51% of piezometers have recorded in < 10 m bgl range.
4. in comparision of Jan 2020 (post monsoon) water level with that of May 2019 (premonsoon), 90% of wells have recorded rise in water levels and 10% of wells have recorded fall. While comparing the Piezometric head of Jan 2020 (post monsoon) with that of May 2019 (pre-monsoon) rise was found in 86% of the Piezometers and fall in 14% of the Piezometers.
5. 66% of wells have recorded fall in water levels and 34% of wells recorded rise in water levels during May 2019 in comparision to decadal mean.37% of Piezometers have recorded rise and 63% piezometers have recorded fall during that period.
6. 72% of wells have recorded rise in water levels and 28% of wells have recorded fall during January 2020with respect to respective decadal means.64% of Piezometers have recorded rise and 36% piezometers have recorded fall during that period.
7. When compared the water level during the premonsoon (May) of 2019 with the premonsoon of (May 2018), rise was recorded in 33% and fall in 67%. 34% of piezometers have recorded rise and 66 % of piezometers have recorded fall.
8. When compared the water level during the Post monsoon (January) of 2020 with the Post monsoon(January) of 2019, rise was recorded in 58% and fall in 42%. 53% of piezometers have recorded rise and 47 % of piezometers have recorded fall
9. When the long term trend of water levels were analysed for the period of Premonsoon (May 2010-2019) falling trend is observed in 73% of wells and rising trend is observed in 27% of wells. When the same exercise for Post monsoon (January 2011-2020) was done, rising trend is observed in 36% and falling trend in 64%.
10. In general the ground water quality in the state is fresh in about 14 % of the Ground Water Monitoring wells as indicated by the EC value less than 750 $\mu\text{s}/\text{cm}$ at 25°C. In about 57 % of the Ground Water Monitoring wells, the EC varies between 751 -2250 $\mu\text{s}/\text{cm}$ at 25°C and 14% of Ground Water Monitoring wells are between 2251-3000 $\mu\text{s}/\text{cm}$ at 25°C indicating that the ground water is slightly mineralized and about 15 % of Ground Water

Monitoring wells the EC is more than 3000 $\mu\text{s}/\text{cm}$ at 25°C indicating that the ground water is highly mineralized

11. The chloride content is less than 250 mg/l in about 59 % of the sample analyzed and 36 % of the sample are between 251 – 1000 mg/l and 5 % shows more than 1000mg/l.

12. The Fluoride content is less than 1.5 mg/l in about 87 % of the sample analyzed and about 13 % of the sample shows more than 1.5 mg/l.

13. The Nitrate content is less than 45mg/l in about 51 % of the sample analyzed and 49 % of sample shows more than 45 mg/l.

ACKNOWLEDGEMENTS

The authors express their gratitude to. Shri.Paul Prabahar, Regional Director, Central Ground Water Board, South Eastern Coastal Region, Chennai, for his constant encouragement throughout the task of compilation and analysis of voluminous data. They express their gratitude to him for the keen interest evinced by him in the report as also for the suggestions offered by him vis-à-vis some aspects for improving their lucidity, which have enhanced not only the form but also the contents of the final report. The authors also profusely thank the hard and arduous work put in by various field officers who diligently collected data and water samples from the field, which forms the base for this report. The authors profoundly thank the huge contribution made by the Officers and staff of the Water Quality Laboratory who have analysed the large number of water samples and interpreted the analytical results thereof. The authors would be failing in their duty if they do not acknowledge the unstinting cooperation offered by their various colleagues who have contributed in a major way in bringing out this report.

Depth to Water level of Un -Confined wells of Tamilnadu State and U.T. of Puducherry
(May 19 - January 2020)
