Aquifer System in The Country	1
State-Wise Seasonal and Annual Rainfall Distribution	2
State/UT- Wise Status of groundwater Monitoring Wells (April 2023)	3

LIST OF ANNEXURES	Annexure No
State-wise DTWL and Distribution of Percentage of Observation Wells - May 2022 in Unconfined Aquifer	I
State-wise DTWL and Distribution of Percentage of Observation Wells - August 2022 in Unconfined Aquifer	II
State-wise DTWL and Distribution of Percentage of Observation Wells - November 2022 (Post-Monsoon) in Unconfined Aquifer	III
State-wise DTWL and Distribution of Percentage of Observation Wells - January 2023 in Unconfined Aquifer	IV
State-wise Annual Fluctuation and Frequency Distribution from Different Ranges from May 2021 to May 2022 (Pre-Monsoon) in Unconfined Aquifer	V
State-wise Annual Fluctuation and Frequency Distribution from Different Ranges from August 2021 to August 2022 in Unconfined Aquifer	VI
State-wise Annual Fluctuation and Frequency Distribution from Different Ranges from November 2020 to November 2021 (Post-Monsoon) in Unconfined Aquifer	VII
State-wise Annual Fluctuation and Frequency Distribution from Different Ranges from January 2022 to January 2023 in Unconfined Aquifer	VIII
State-wise Seasonal Fluctuation and Frequency Distribution from Different Ranges from May 2022 to August 2022 in Unconfined Aquifer	IX
State-wise Seasonal Fluctuation and Frequency Distribution from Different Ranges from May 2022 to November 2022 in Unconfined Aquifer	X
State-wise Seasonal Fluctuation and Frequency Distribution from Different Ranges from May 2022 to January 2023 in Unconfined Aquifer	XI
State-wise Decadal Water Level Fluctuation with Mean May (2012 to 2021) and May 2022 (Pre-Monsoon) in Unconfined Aquifer	XII
State-wise Decadal Water Level Fluctuation with Mean August (2012 to 2021) and August 2022 in Unconfined Aquifer	XIII
State-wise Decadal Water Level Fluctuation with Mean November (2012 to 2021) and November 2022 (Post-Monsoon) in Unconfined Aquifer	XIV
State-wise Decadal Water Level Fluctuation with Mean January (2013 to 2022) and January 2023 in Unconfined Aquifer	XV
State-wise DTWL and Distribution of Percentage of Observation Wells - May 2022 (Pre-Monsoon) in Deeper Aquifer	XVI
State-wise DTWL and Distribution of Percentage of Observation Wells - August 2022 in Deeper Aquifer	XVII
State-wise DTWL and Distribution of Percentage of Observation Wells - November 2022 (Post-Monsoon) in Deeper Aquifer	XVIII
State-wise DTWL and Distribution of Percentage of Observation Wells - January 2023 in Deeper Aquifer	XIX

State-wise Annual Fluctuation & Frequency Distribution of Different Ranges from Pre-Monsoon 2021 to Pre-Monsoon 2022 in Deeper Aquifer	XX
State-wise Annual Fluctuation & Frequency Distribution of Different Ranges from August 2021 to August 2022 in Deeper Aquifer	XXI
State-wise Annual Fluctuation & Frequency Distribution of Different Ranges from November 2021 to November 2022 in Deeper Aquifer	XXII
State-wise Annual Fluctuation & Frequency Distribution of Different Ranges from January 2023 to January 2022 in Deeper Aquifer	XXIII
State-wise Seasonal Fluctuation & Frequency Distribution of Different Ranges from Pre-Monsoon 2022 to August 2022 in Deeper Aquifer	XXIV
State-wise Seasonal Fluctuation & Frequency Distribution of Different Ranges from Pre-Monsoon 2022 to November 2022 in Deeper Aquifer	XXV
State-wise Seasonal Fluctuation & Frequency Distribution of Different Ranges from Pre-Monsoon 2022 to January 2023 in Deeper Aquifer	XVI
State-wise Decadal Water Level Fluctuation with Mean May (2012 to 2021) and May 2022 (Pre-Monsoon) in Deeper Aquifer	XXVII
State-wise Decadal Water Level Fluctuation with Mean August (2012 to 2021) and August 2022 in Deeper Aquifer	XXVIII
State-wise Decadal Water Level Fluctuation with Mean November (2012 to 2021) and November 2022(Post-Monsoon) in Deeper Aquifer	XXIX
State-wise Decadal Water Level Fluctuation with Mean January (2013 to 2022) and January 2023 in Deeper Aquifer	XXX

1. HYDROGEOLOGICAL SETUP OF THE COUNTRY

1.1 GROUNDWATER OCCURRENCE

The groundwater behavior in the Indian sub-continent is highly complicated due to the occurrence of diversified geological formations with considerable lithological and chronological variations, complex tectonic framework, climatological dissimilarities and various hydrochemical conditions. Studies carried out over the years have revealed that aquifer groups in alluvial / soft rocks even transcend the surface basin boundaries. Broadly two groups of rock formations have been identified depending on characteristically different hydraulics of groundwater, Viz. Porous Formations and Fissured Formations.

1.1.1 POROUS FORMATION

Porous formations have been further subdivided into Unconsolidated and Semi-consolidated formations.

UNCONSOLIDATED FORMATIONS

The areas covered by alluvial sediments of river basins, coastal and deltaic tracts constitute the unconsolidated formations. These are by far the most significant groundwater reservoirs for large scale and extensive development. The hydrogeological environment and groundwater regime in the Indo-Ganga-Brahmaputra basin indicate the existence of potential aquifers having enormous fresh groundwater reserve. Bestowed with high incidence of rainfall and covered by a thick pile of porous sediments, these groundwater reservoirs get replenished every year and are being used heavily. In these areas, in addition to the Annual Replenishable Groundwater Resources available in the zone of water level fluctuation (Dynamic Groundwater Resource), there exists a huge groundwater reserve in the deeper passive recharge zone below the zone of fluctuation as well as in the deeper confined aquifers which remains largely unexplored as yet. Although the mode of development of groundwater is primarily through dug wells, dug cum bore well and cavity wells, thousands of tube wells have been constructed during last few decades.

SEMI-CONSOLIDATED FORMATIONS

The semi-consolidated formations normally occur in narrow valleys or structurally faulted basins. The Gondwanas, Lathis, Tipams, Cuddalore sandstones and their equivalents are the most extensive productive aquifers in this category. Under favorable situations, these formations give rise to free-flowing wells. In selected tracts of northeastern India, these

water-bearing formations are quite productive. The Upper Gondwanas, which are generally arenaceous, in general, constitute prolific aquifers.

1.1.2 FISSURED FORMATIONS (CONSOLIDATED FORMATIONS)

The consolidated formations occupy almost two-thirds of the country. These formations, except vesicular volcanic rocks have negligible primary porosity. From the hydrogeological point of view, fissured rocks are broadly classified into four types viz. Igneous and metamorphic rocks (excluding volcanic and carbonate rocks), volcanic rocks, consolidated sedimentary rocks and Carbonate rocks.

IGNEOUS AND METAMORPHIC ROCKS EXCLUDING VOLCANIC AND CARBONATE ROCKS

The most common rock types under this category are granites, gneisses, charnockites, khondalites, quartzites, schists and associated phyllites, slates, etc. These rocks possess negligible primary porosity but attain porosity and permeability due to fracturing and weathering. Groundwater yield also depends on the rock type and grade of metamorphism. Generally, the granites, Khondalites and biotite gneisses have better yield potential as compared to charnockites.

VOLCANIC ROCKS

The predominant types of volcanic rocks are the basaltic lava flows of Deccan Plateau. The highly variable water bearing properties of different flow units control groundwater occurrence in Deccan Traps. The Deccan Traps have usually poor to moderate permeability depending on the presence of primary and secondary fractures.

CONSOLIDATED SEDIMENTARY ROCKS EXCLUDING CARBONATE ROCKS

Consolidated sedimentary rocks occur in Cuddapahs, Vindhyan and their equivalents. The formations consist of conglomerates, sandstones, shales. The presence of bedding planes, joints, contact zones and fractures controls the groundwater occurrence, movement and yield potential.

CARBONATE ROCKS

Limestones in the Cuddapah, Vindhyan and Bijawar group of rocks dominates the carbonate rocks other than marbles and dolomites. In carbonate rocks, the circulation of water creates solution cavities thereby increasing the permeability of the aquifers. The solution activity leads to widely contrasting permeabilities within short distances.

1.2 HYDROGEOLOGICAL UNITS AND THEIR GROUNDWATER POTENTIAL

Hydrogeological map of India is depicted in **Plate-I** and the geographical distribution of hydrogeological units along with their Groundwater potential is given in **Table- 1**.

TABLE-1: AQUIFER SYSTEM IN THE COUNTRY

System	Coverage	Groundwater potential
Unconsolidated formations - alluvial	Indo-Gangetic, Brahmaputra plains	Enormous reserves down to 600 m depth. High rain fall and hence recharge is ensured. Can support large-scale development through deep tube wells
	Coastal Areas	Reasonably extensive aquifers but risk of saline water intrusion
	Part of Desert area – Rajasthan and Gujarat	Scanty rainfall. Negligible recharge. Salinity hazards. Groundwater Availability at great depths.
Consolidated/semi-consolidated formations - sedimentaries, basalts and crystalline rocks	Peninsular Areas	Availability depends on secondary porosity developed due to weathering, fracturing etc. Scope for GW availability at shallow depths (20-40 m) in some areas and deeper depths (100-200 m) in other areas. Varying yields.
Hilly	Hilly states	Low storage capacity due to quick runoff

Hydrogeological Map of India

				Unconsolidated Formations
				Consolidated /Semi-Consolidated Formations
				Hilly Areas

2. RAINFALL VARIATIONS

Variability in the onset, withdrawal and quantum of rainfall during the monsoon season has profound impacts on water resources, power generation, agriculture, economics and ecosystems in the country. The variation in climate is perhaps greater than any other area of similar size in the world. There is a large variation in the amounts of rainfall received at different locations. The average annual rainfall is about 122 cm, but it has great spatial variations. The areas on the Western Ghats and the Sub-Himalayan areas in North East and Meghalaya Hills receive heavy rainfall of over 250 cm annually, whereas the Areas of Northern parts of Kashmir and Western Rajasthan receive rainfall less than 40 cm. The rainfall pattern roughly reflects the different climate regimes of the country, which vary from humid in the northeast (about 180 days rainfall in a year), to arid in Rajasthan (20 days rainfall in a year). Due to climatic changes, in recent times, the occurrence of high intensity rainfall event has increased and the number of rainy days has decreased. In some years, it has been observed that, the southwest monsoon has extended beyond its normal withdrawal date.

Normal Annual Rainfall

The rainfall over India has large spatial as well as temporal variability. Annual rainfall is more than 200 cm over these regions. For the country as whole, mean monthly rainfall during July (301 mm) is highest and contributes about 24.6% of annual rainfall (1219.77 mm). The mean rainfall during August is slightly lower and contributes about 21.9% of annual rainfall. June and September rainfall are almost similar and contribute 13.8% and 14.5% of annual rainfall, respectively. The mean southwest monsoon (June, July, August & September) rainfall (914 mm) contributes 75.5% of annual rainfall (1219.77 mm). Contribution of pre-monsoon (March, April & May) rainfall and post-monsoon (October, November & December) rainfall in annual rainfall is mostly the same (11%). Coefficient of variation is higher during the months of November, December, January and February. The Thematic map of distribution of annual normal rainfall is given in **Plate-II**. The map shows that, one state i.e., Rajasthan receives annual rainfall between 250 – 500 mm, 9 states and UTs between 500 mm – 1000 mm, 15 states between 1000 – 2000 mm, 4 states between 2000-3000 mm and 5 states more than 3000 mm in a year.

Normal Monsoon Rainfall

The SW monsoon is the most significant feature of the Indian climate. The season is spread over four months, but the actual period at a particular place depends on onset and withdrawal

dates. It varies from less than 75 days over West Rajasthan, to more than 120 days over the south-western regions of the country contributing to about 75% of the annual rainfall. The onset of the SW monsoon normally starts over the Kerala coast, the southern tip of the country by 1 June, advances along the Konkan coast in early June and covers the whole country by middle of July. However, onset occurs 42 about a week earlier over islands in the Bay of Bengal. The monsoon is influenced by global and local phenomenon like El Nino, northern hemispheric temperatures, sea surface temperatures, snow cover etc. Normal monsoon rainfall more than 1500 mm is being observed over most parts of northeast India, Konkan & Goa. It ranges from 317 mm in Tamil Nadu state to 6218 mm in Meghalaya state with an average of 914.46 mm.

Normal Post-monsoon rainfall

North-East (NE) monsoon or post-monsoon season is transition season associated with the establishment of the north-easterly wind regime over the Indian subcontinent. Meteorological subdivisions namely Coastal Andhra Pradesh Rayalaseema, Tamil Nadu, Kerala and South Interior Karnataka receive good amount of rainfall accounting for about 35% of their annual total in these months. Many parts of Tamil Nadu and some parts of Andhra Pradesh and Karnataka receive rainfall during this season due to the storms forming in the Bay of Bengal. It ranges from 18 mm in Rajasthan state to 910 mm in Puducherry UT with an average of 200 mm. In the north eastern states, it ranges from it ranges from 169 mm to 315 mm with an average of 239 mm.

Rainfall Variation in 2022

The distribution of annual rainfall in 2022 is given as thematic map in **Plate III**. The map shows that Ladakh received annual rainfall less than 500 mm, 7 states between 500 mm – 1000 mm, 19 states between 1000 – 2000 mm, 4 states between 2000-3000 mm and 4 states more than 3000 mm. State-wise seasonal and annual observed rainfall, and its percentage departure from normal rainfall is given in **Table 2**. This data is based on India-WRIS, IMD Gridded Data. It may be observed that during 2022, highest rainfall of 5176 mm was received at Meghalaya state and the lowest rainfall of 366.85 mm was received at Ladakh state. However, on comparing with normal rainfall, it may be seen that, Daman & Diu has the highest positive departure of 301% from its normal whereas Meghalaya is with highest negative departure of 35.32% from its normal rainfall. Negative departure from normal

annual rainfall is observed in 15 states. The national average rainfall is 1243.84 mm with a positive departure of 1.97% from normal.

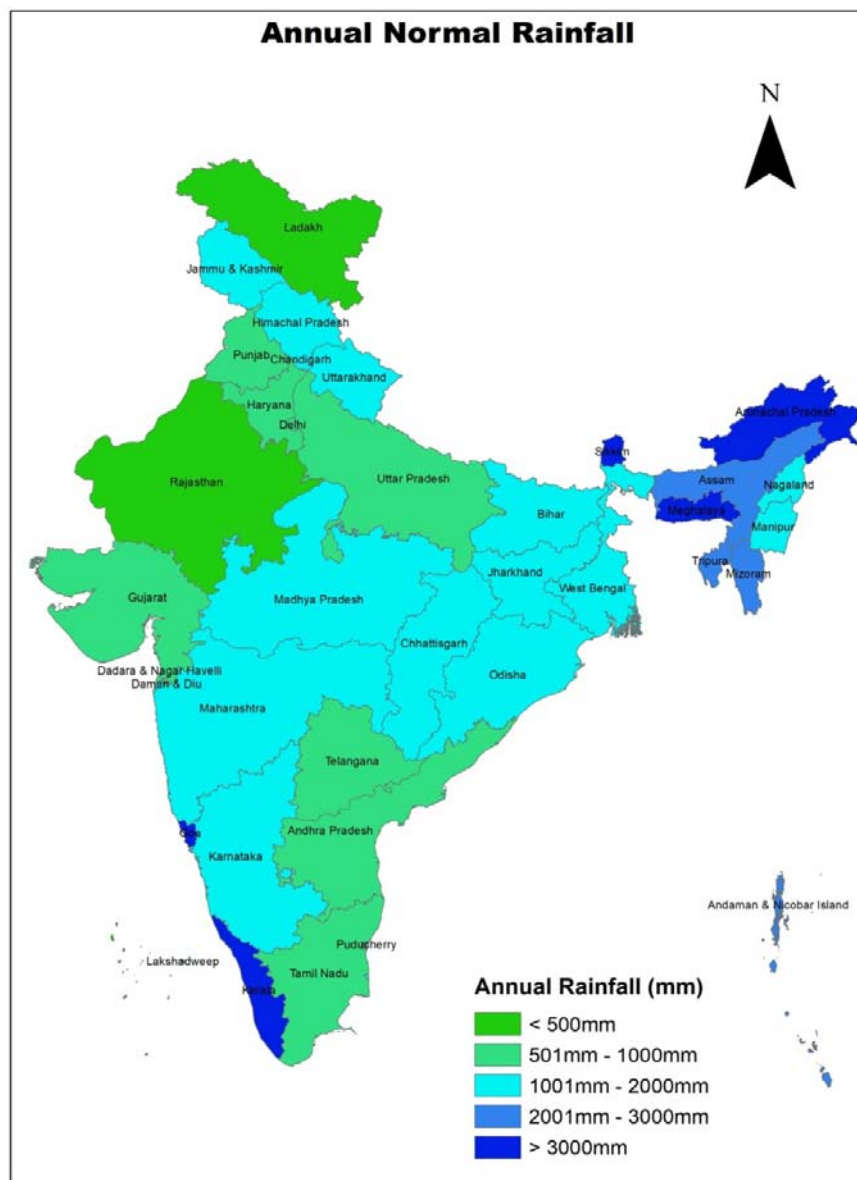

TABLE 2: STATE-WISE SEASONAL AND ANNUAL RAINFALL DISTRIBUTION (Source: IMD Gridded Data, IndiaWRIS)

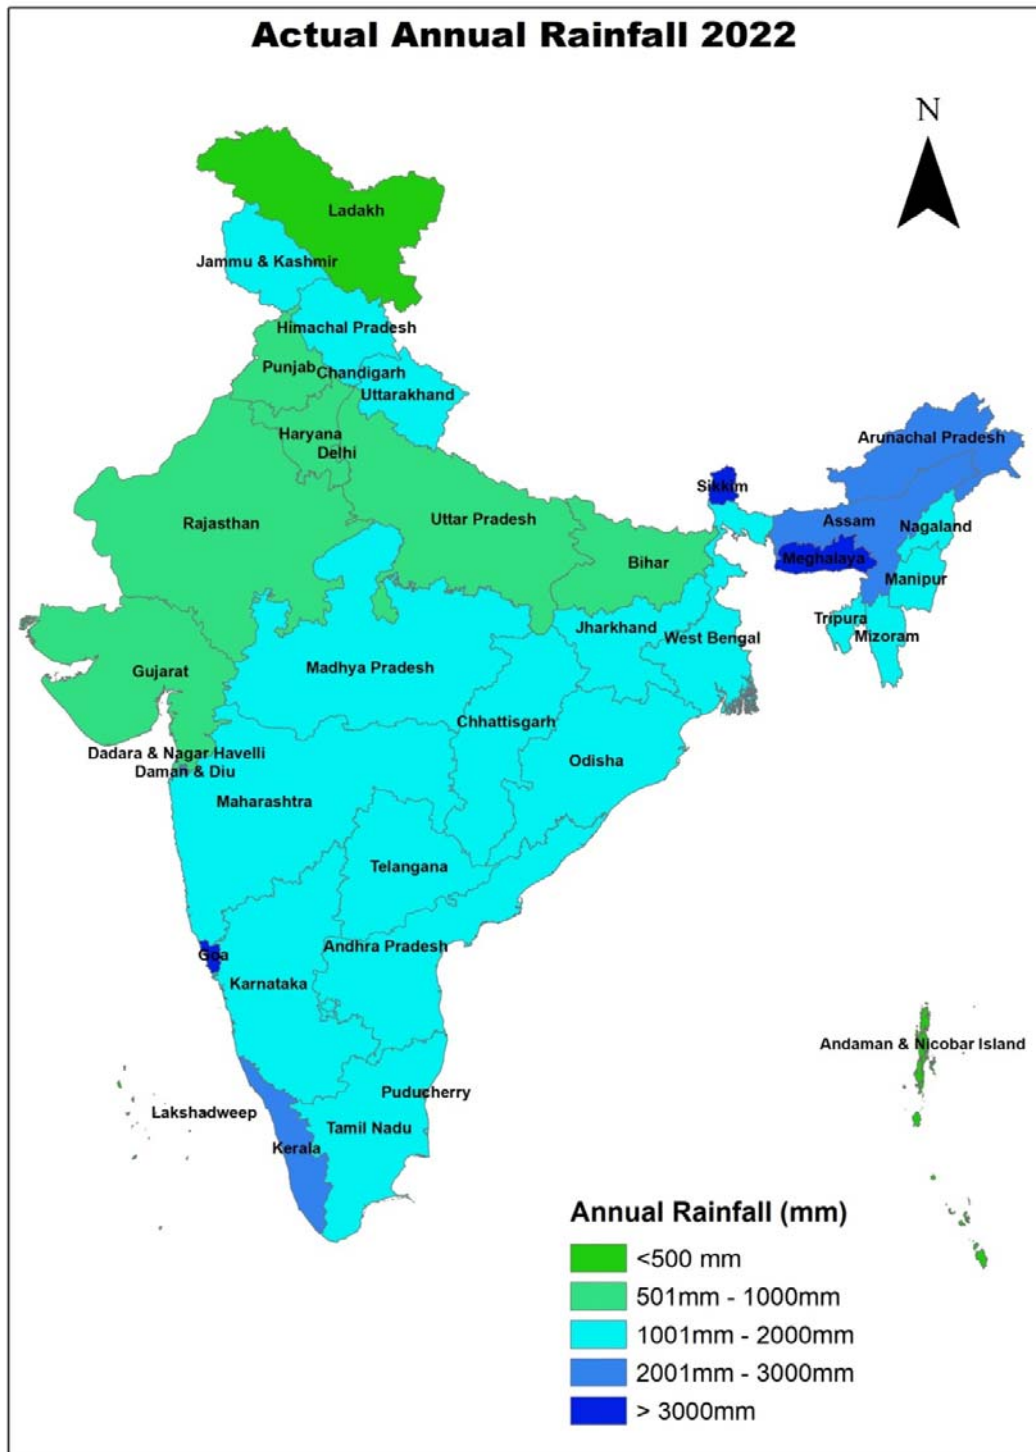

STATE	Non-Monsoon Period				Monsoon Period				Cumulative (Annual)		
	Actual (mm)	Normal (mm)	Deviation (mm)	Percentage of Non-Monsoon Rainfall from Annual	Actual (mm)	Normal (mm)	Deviation (mm)	Percentage of Monsoon Rainfall from Annual	Actual (mm)	Normal (mm)	Deviation (mm)

It may be observed from the data that the variation of southwest monsoon rainfall is very high and it ranges from 196 mm in Ladakh to 3344.38 mm in Dadra and Nagar Haveli. The states of Andhra Pradesh, Daman & Diu, Goa, Gujarat, Jammu & Kashmir, Madhya Pradesh, Maharashtra, Pondicherry, Rajasthan, Sikkim, Tamil Nadu and Telangana has received more than normal (positive departure of more than 10%) rainfall in the monsoon season. The states of Arunachal Pradesh, Bihar, Delhi, Jharkhand, Kerala, Meghalaya, Nagaland, Tripura, Uttar Pradesh and West Bengal have received rainfall with negative departure (more than 10%) from normal. The national average monsoon rainfall is 900 mm with a negative departure of 1.58% from normal.

PLATE – II

3.0 GROUNDWATER LEVEL SCENARIO

3.1 INTRODUCTION

Ground Water Year Book is prepared annually by CGWB depicting changes in groundwater regime of the country through different seasons. It is an effort to obtain information on groundwater levels through representative monitoring wells. The important attributes of groundwater regime monitoring are groundwater level.

The natural conditions affecting the groundwater regime involve climatic parameters like rainfall, evapotranspiration etc., whereas anthropogenic influences include pumpage from the aquifer, recharge due to irrigation systems and other practices like waste disposal etc.

Groundwater levels are being measured by Central Ground Water Board four times a year during January, March/April/ May, August and November. The regime monitoring started in the year 1969 by Central Groundwater Board. A network of 25437 observation wells, as on 30.04.2023, located all over the country is being monitored. Groundwater samples are collected from these observation wells once a year during the month of March/April/May to obtain background information of groundwater quality changes on regional scale. The database thus generated forms the basis for planning the groundwater development and management programmes. The groundwater level and quality monitoring are of particular importance in coastal as well inland saline environment to assess the changes in salt water/fresh water interface as also the gradual quality changes in the fresh groundwater regime. This data is used for assessment of groundwater resources and changes in the regime consequent to various development and management activities.

The premonsoon water level data is collected from all the monitoring stations during the months of March/ April/ May, depending on the climatological conditions of the region. For North eastern states premonsoon data is collected during March, since the onset of monsoon is normally observed in April. Similarly for Orissa, West Bengal and Kerala where monsoon appears early in May the monitoring is carried out during the month of April. For remaining states pre-monsoon monitoring month is May. Water levels during August are monitored to access the impact of monsoon on the groundwater resources. Post monsoon data collected during November reflects the cumulative effect of groundwater recharge and withdrawal of groundwater for various purposes. January water level data indicates the effect of withdrawal for rabi crops.

The data is analyzed to know about the frequency distribution of water levels during different periods and seasonal, annual and decadal fluctuations in water levels. The water level and

water level fluctuation maps are prepared for each monitoring period to study the spatial and temporal changes in groundwater regime.

The State/UT-wise distribution of the groundwater observation wells is given in **Table 3** and depicted in **Plate-IV**.

PLATE - IV

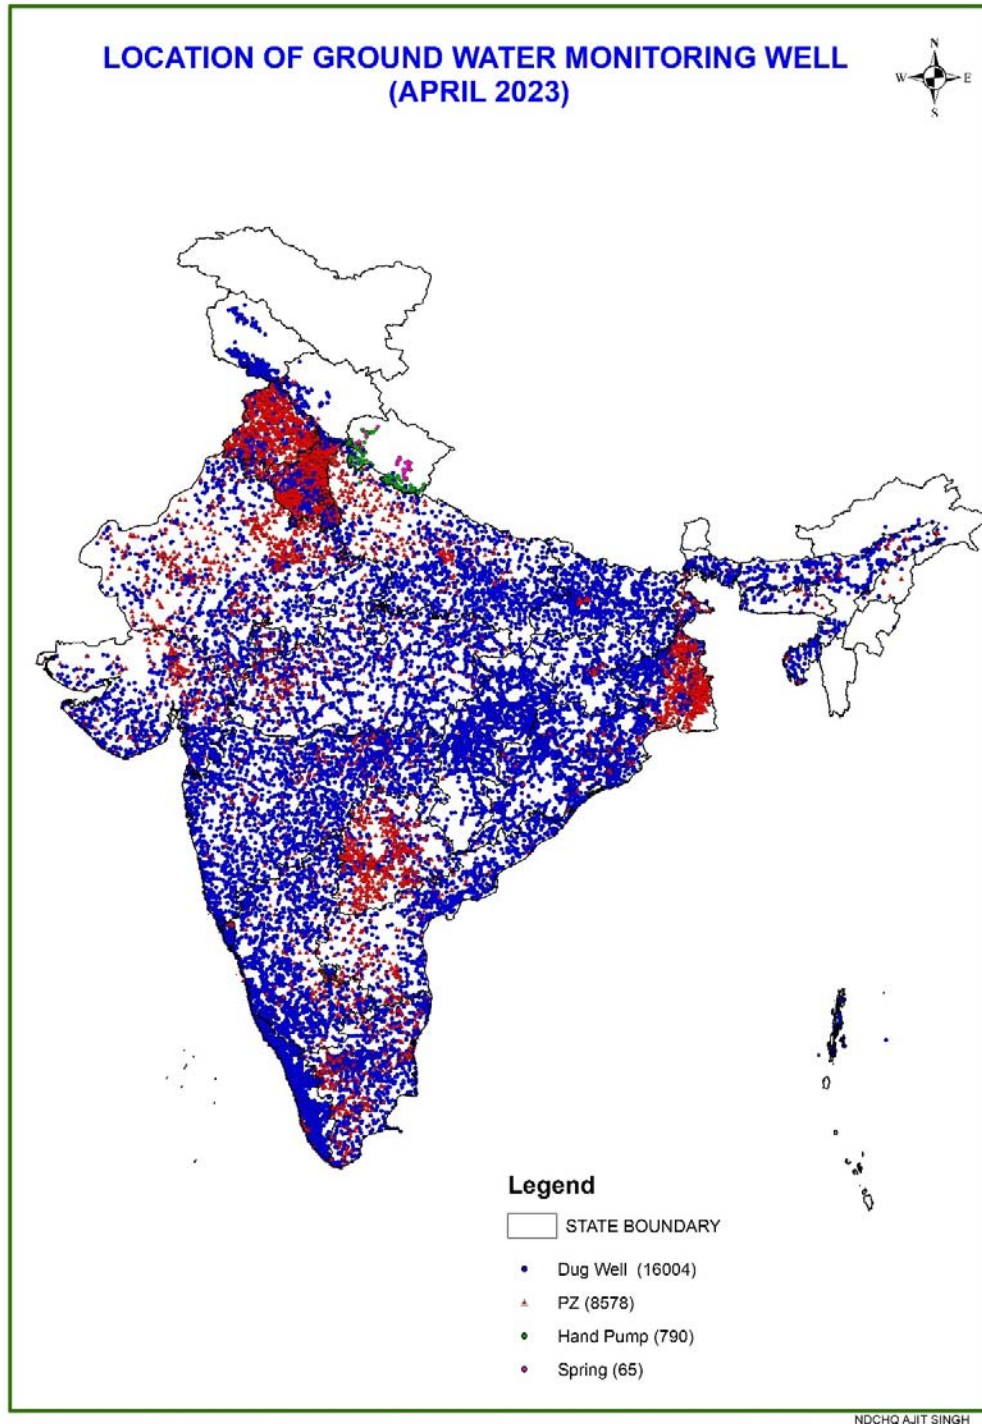

TABLE3: STATE/UT -WISE STATUS OF GROUNDWATER MONITORING WELLS

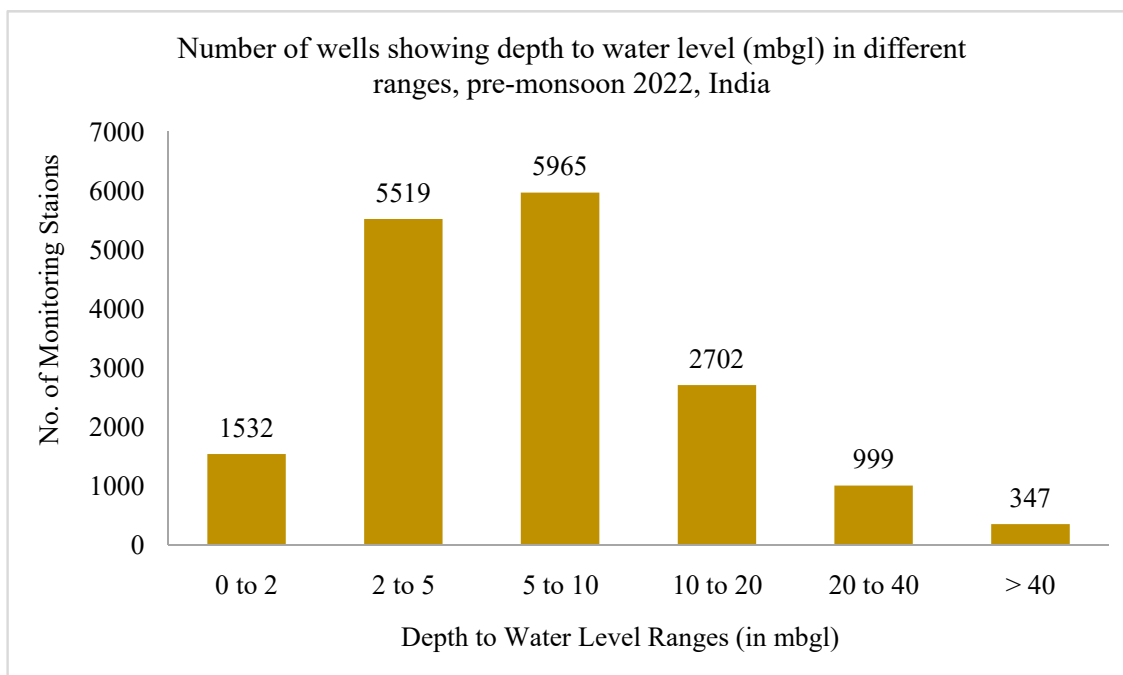

Sl No	Name of the State/UT	Number of GW Monitoring Stations (April 2023)				
		Dug Well	Piezometer	Handpump	Spring	Total
1	Andhra Pradesh	633	701	0	0	1334
2	Arunachal Pradesh	26	5	0	0	31
3	Assam	355	80	0	0	435
4	Bihar	800	90	0	0	890

3.2 GROUNDWATER REGIME IN UNCONFINED AQUIFER

3.2.1 DEPTH TO WATER LEVEL IN UNCONFINED AQUIFER

DEPTH TO WATER LEVEL – PRE-MONSOON 2022

The groundwater level data for pre-monsoon 2022 indicates that out of the total 17064 wells analysed, 1532 (9%) wells are showing water level less than 2 m bgl (metres below ground level), 5519 (32.3%) wells are showing water level in the depth range of 2 to 5 m bgl, 5965 (35.0 %) wells are showing water level in the depth range of 5 to 10 m bgl, 2702 (15.8%) wells are showing water level in the depth range of 10 to 20 m bgl, 999 (5.9%) wells are showing water level in the depth range of 20 to 40 m bgl and the remaining 347 (2%) wells are showing water level more than 40 m bgl. The maximum depth to water level of 145.50 m bgl is observed in Bikaner district of Rajasthan whereas the minimum is less than 1 m bgl (**Plate VI, Annexure I**). Groundwater level data of pre-monsoon 2022 for the country reveals that the general depth to water level of the country ranges from 5 to 10 m bgl. Very shallow water level of less than 2 m bgl is observed in few states, such as Andhra Pradesh, Assam, Karnataka, Kerala, Odisha, Tamil Nadu and West Bengal in small patches. Groundwater level in the range of 2 to 5 m bgl is seen in Assam, Uttar Pradesh, Bihar, Coastal parts of Odisha, few pockets in Andhra Pradesh, Gujarat and Maharashtra. Major part of the country shows water level in the range 5 to 10 m bgl, especially in the states of Madhya Pradesh, Uttar Pradesh, Bihar, Jharkhand, West Bengal, Odisha, Chhattisgarh, Maharashtra, Gujarat, Tamil Nadu, Telangana and Karnataka. In major parts of north-western and western states, especially in the states of Delhi, Haryana, Punjab and Rajasthan, depth to water level is generally deeper and ranges from about 20 to more than 40 m bgl.

DEPTH TO WATER LEVEL – AUGUST 2022

The groundwater level data for August 2022 (*Annexure-II*) indicates that, out of the 16602 wells analysed, 6130 (36.9 %) wells are showing water level less than 2 m bgl (metres below ground level), 5819 (35.0%) wells are showing water level in the depth range of 2-5 m bgl, 2719 (16.4%) wells are showing water level in the depth range of 5-10 m bgl, 1042 (6.3%) wells are showing water level in the depth range of 10-20 m bgl, 633 (3.8%) wells are showing water level in the depth range of 20-40 m bgl and the remaining 257 (1.5%) wells are showing water level more than 40 m bgl. The map of depth to water levels during August 2022 is shown in **Plate-VII**. The general depth to water level of the country ranges from 0 to 5 m bgl. Almost 72% of the wells analysed show water level in the range of 0 to 5 m bgl. Very shallow water level of less than 2 m bgl is observed in considerable number of wells in almost all the states, except Chandigarh, Punjab, Delhi and Tamil Nadu. Water level in the range of 2 to 5 m bgl, is observed in almost all states. Punjab, where less than 15 % of wells have water level of 2 to 5 mbgl. In major parts of north-western and western states, depth to water level is generally deeper and ranges from about 10 to 40 m bgl. In parts Delhi, Haryana, Punjab and Rajasthan, water level of more than 40 m bgl is also recorded. The maximum depth to water level of 130.6 m bgl is observed at Khara in Jodhpur district of

Rajasthan, whereas the minimum is 0.01 m bgl at places in Andhra Pradesh, Karnataka, Maharashtra, Gujarat and Madhya Pradesh.

DEPTH TO WATER LEVEL – NOVEMBER 2022 (POST-MONSOON)

The groundwater level data for November 2022 indicates that out of the total 17599 wells analysed, 4221 (24.0 %) wells are showing water level less than 2 m bgl, 7456 (42.4%) wells are showing water level in the depth range of 2 to 5 m bgl, 3621 (20.6%) wells are showing water level in the depth range of 5 to 10 m bgl, 1273 (7.2%) wells are showing water level in the depth range of 10 to 20 m bgl, 699 (4.0%) wells are showing water level in the depth range of 20 to 40 m bgl and the remaining 329 (1.9%) wells are showing water level more than 40 m bgl. In general, depth to water level ranges from 2 to 5 m bgl as observed at about 66.4% of the monitoring stations. Very shallow water level of less than 2 m bgl is observed in all the states, except Chandigarh. Groundwater level in the range of 2 to 5 m bgl is predominant in the entire Country, as major part of the country shows water level in the range 2 to 5 m bgl. In parts of north-western and western states, especially in the states/UTs of Chandigarh, Delhi, Haryana, Punjab and Rajasthan, depth to water level is generally deeper and ranges from about 10m bgl to more than 40 m bgl. The peninsular part of country recorded a water level in the range of 2 to 10 m bgl. The maximum depth to water level of

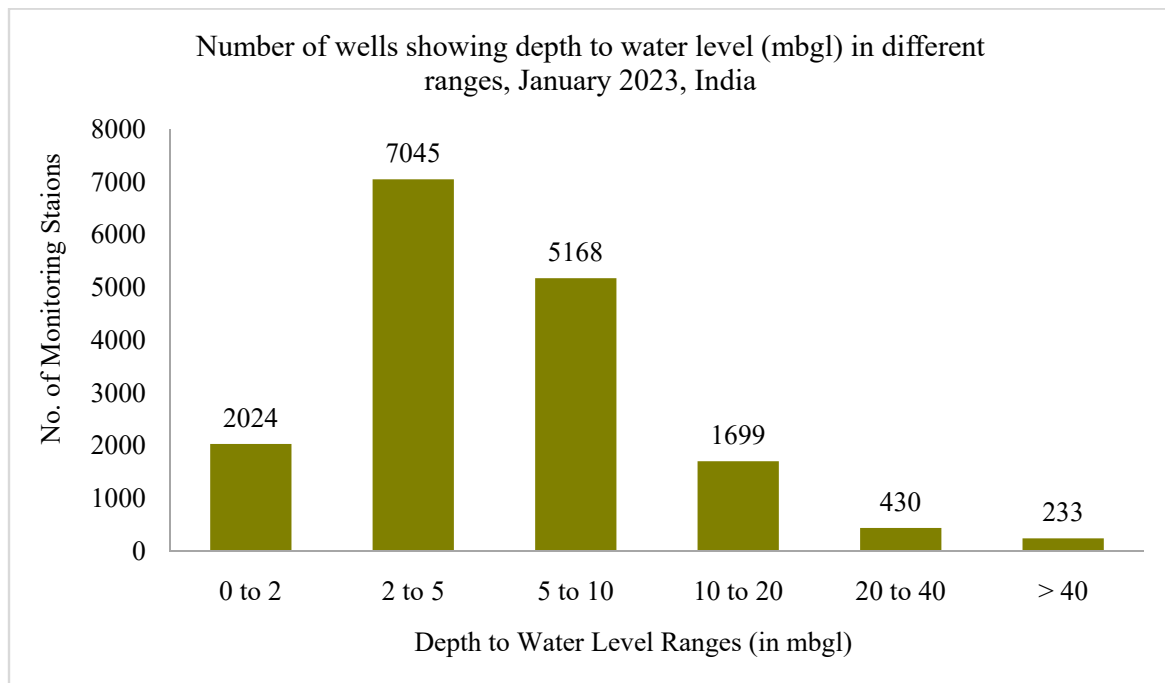

124.5 m bgl is observed in Jodhpur district of Rajasthan whereas the minimum is less than 1 m bgl(Plate-VIII, Annexure- III).

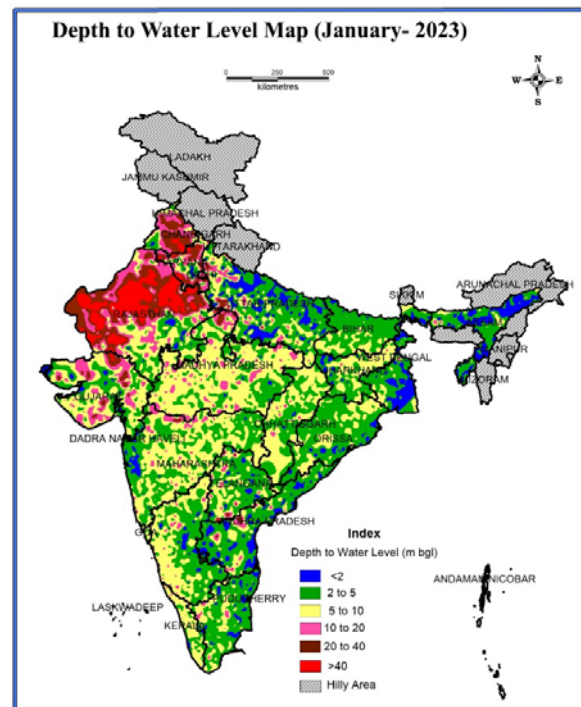

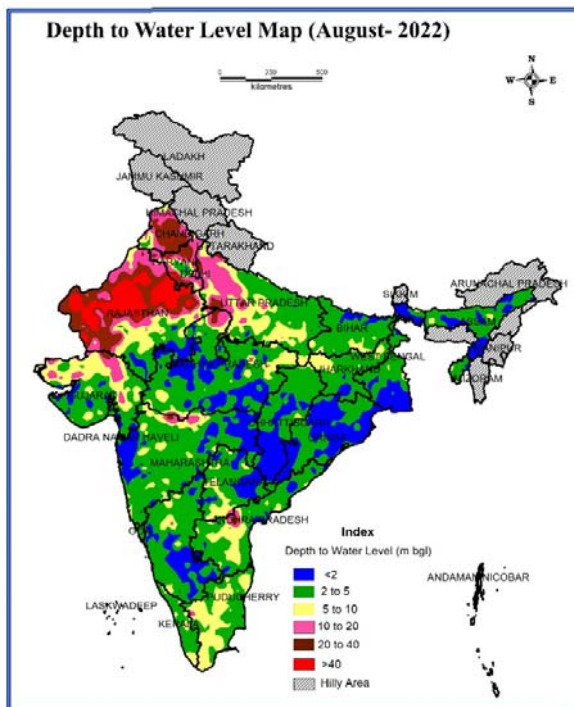

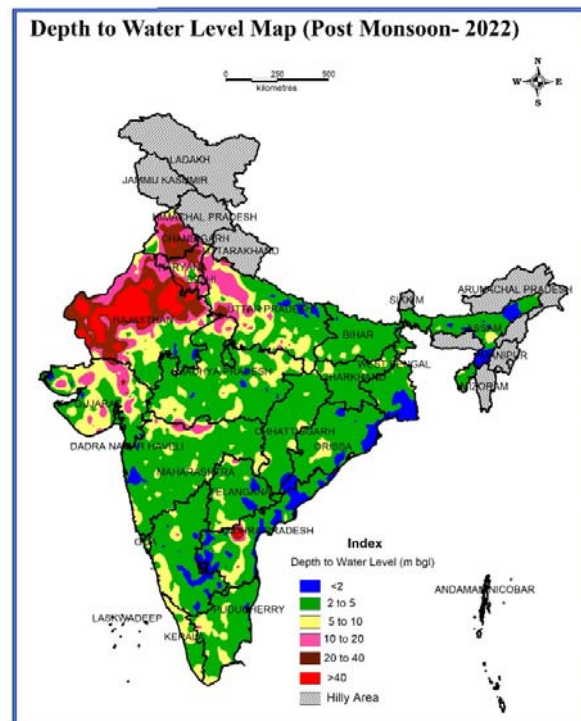

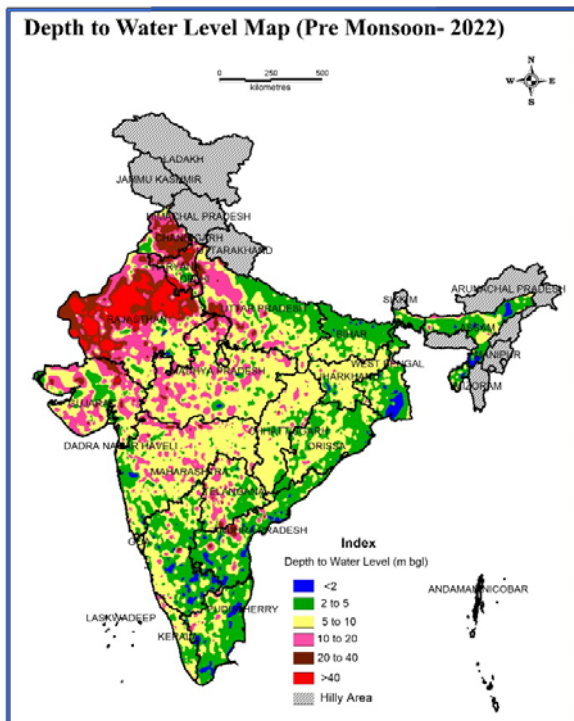

DEPTH TO WATER LEVEL– JANUARY 2023

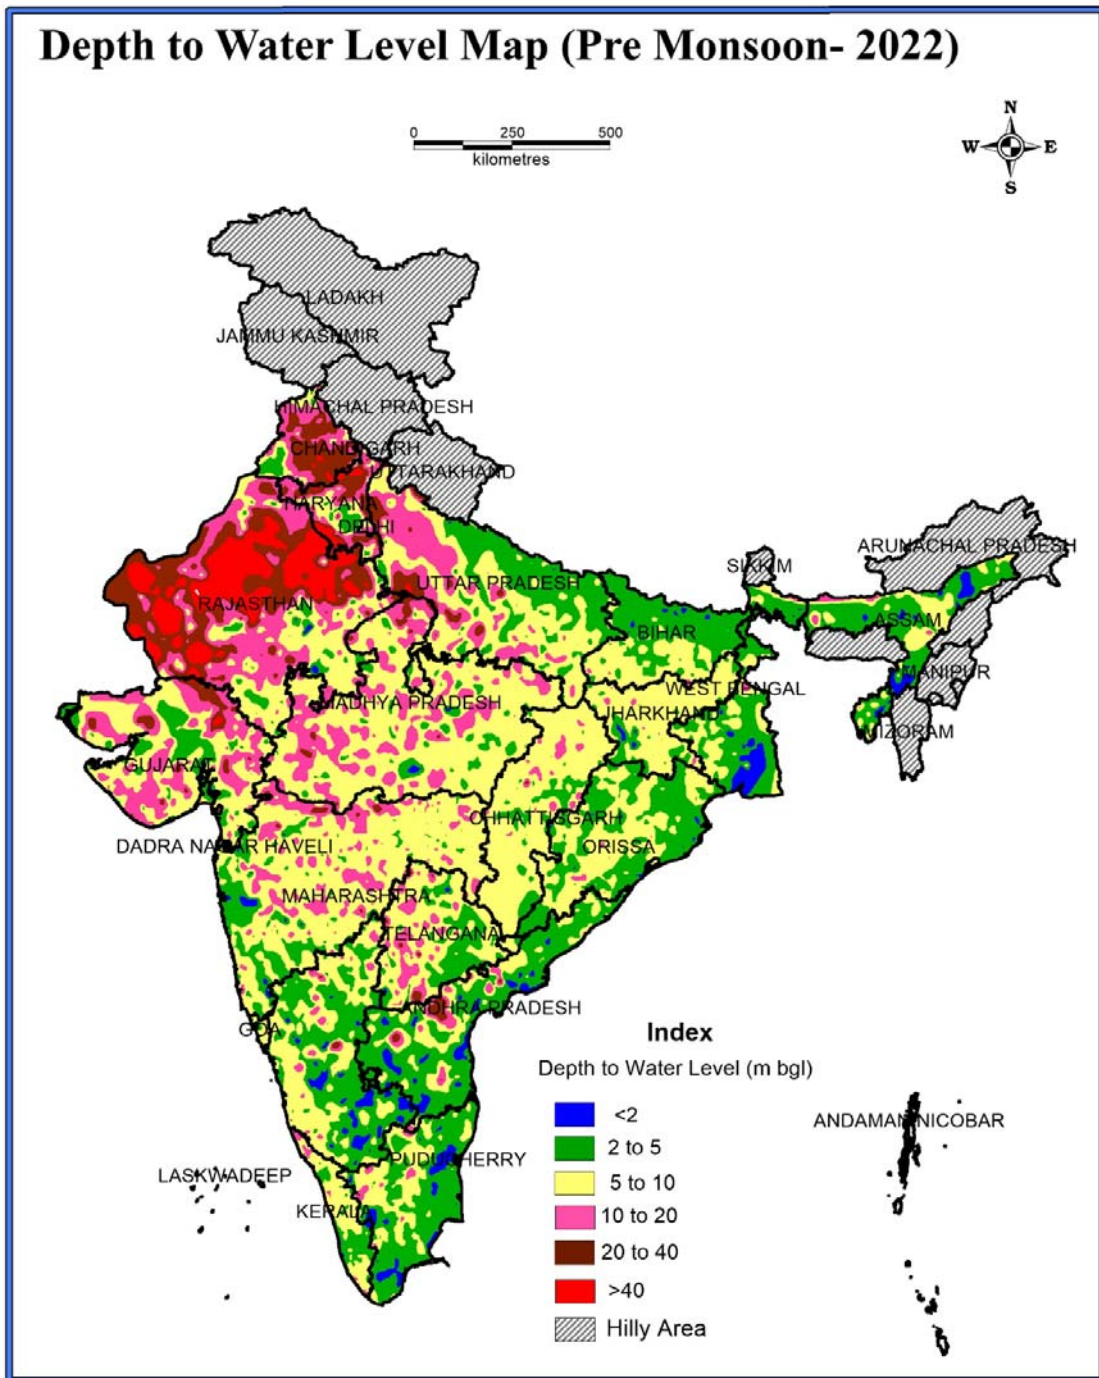

The groundwater level data for January 2023 indicates that out of the total 16599 wells analysed, 2024 (12.2%) wells are showing water level less than 2 m bgl (metres below ground level), 7045 (42.4%) wells are showing water level in the depth range of 2 to 5 m bgl, 5168 (31.1%) wells are showing water level in the depth range of 5 to 10 m bgl, 1699 (10.2%) wells are showing water level in the depth range of 10 to 20 m bgl, 430 (2.6%) wells are showing water level in the depth range of 20 to 40 m bgl and the remaining 233 (1.4%) wells are showing water level more than 40 m bgl. The maximum depth to water level of 146.11 m bgl is observed in Jodhpur district of Rajasthan, whereas the minimum is less than 1 m bgl. (Plate-IX, Annexure-IV). The depth to water level map of January 2023 for the country indicates that in general depth to water level ranges from 2 to 10 m bgl as observed at about 86% of the monitoring stations. Shallow water level of less than 2 m bgl is observed in very small and isolated pockets in the states of Assam, Odisha, Andhra Pradesh, Tamil Nadu, Konkan areas of Maharashtra and northern parts of Uttar Pradesh and Bihar. Water level in the range of 5 to 10 m bgl is prominent in all the states of Central and western parts of Karnataka and Kerala in Southern India. In major parts of north-western states depth to water level generally ranges from 10 to 40 m bgl. Water level of more than 40 m bgl is also

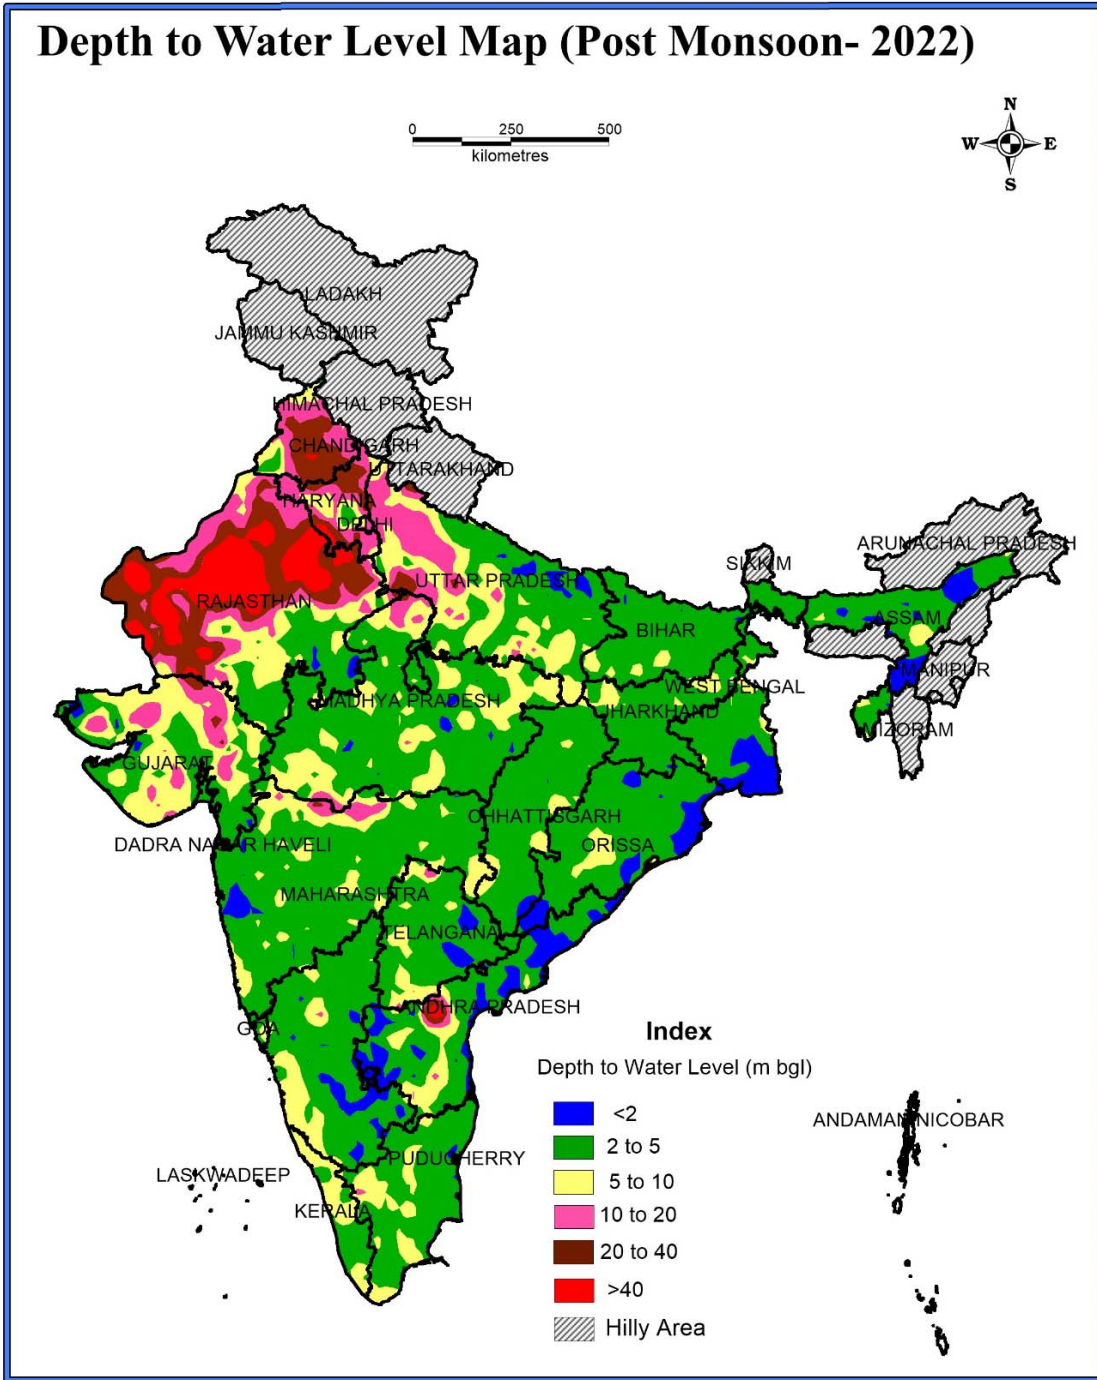

prevalent in the north western part of the country. In some parts of Haryana, Punjab and Delhi and major parts of Rajasthan, water level of more than 40 m bgl is recorded.

DEPTH TO WATER LEVEL AT A GLANCE

3.2.2 ANNUAL WATER LEVEL FLUCTUATION IN UNCONFINED AQUIFER

ANNUAL WATER LEVEL FLUCTUATION (PREMONSOON 2022 - PREMONSOON 2021)

As less number of wells were monitored during pre-monsoon 2021, the water level fluctuation analysis could be done only in 9673 wells. The water level fluctuation of pre-monsoon 2022 compared to pre-monsoon 2021 shows that, 4719 (48.8%) are showing rise and 4832 (50.0%) are showing fall in water level. Remaining 122 (1.2%) stations analysed do not show any change in water level. Both rise and fall are equally predominant in the country. About 38.7% wells are showing rise in the water level in the range of less than 2 m. About 6.7% wells are showing rise in water level in 2 to 4 m range and 3.3% wells showing rise in water level more than 4 m range. Similarly, 38.3% wells are showing decline in water level in less than 2 m range. About 7% wells are showing decline in water level in 2 to 4 m range and 4.6% wells are showing decline in water level more than 4 m range. Fluctuation is mainly in the range of 0 to 2 m (**Plate XI, Annexure V**). A comparison of depth to water level of pre-monsoon 2022 to pre-monsoon 2021 also reveals that in general there is fall in water level in most part of the country. Fall is mostly in the range of 0 to 2 m, and observed in the states of Bihar, Chhattisgarh, Gujarat, Jharkhand, Madhya Pradesh, Punjab, Rajasthan and Uttar Pradesh. Fall of more than 4 m is observed in isolated pockets, in the states of Chhattisgarh, Gujarat, Jharkhand and Rajasthan. Rise in water level is also observed in the states of Assam, Haryana, Kerala, Odisha, Tamil Nadu, West Bengal, Chandigarh, Delhi, Jammu and Kashmir and Puducherry.

ANNUAL WATER LEVEL FLUCTUATION (AUGUST 2022-AUGUST 2021)

A comparison of depth to water level of August 2022 with August 2021 reveals that in general, there is both rise and fall in water level in the country. Rise and fall are mostly in the range of 0 to 2 m. Rise in water level has been observed in the states of Andhra Pradesh, Chandigarh, Chhattisgarh, Delhi, Goa, Gujarat, Haryana, Jammu and Kashmir, Karnataka, Madhya Pradesh, Maharashtra, Odisha, Punjab, Rajasthan, Tamil Nadu and Telangana (Plate-XII, Annexure-VI). Falling water level is observed in Arunachal Pradesh, Assam, Bihar, Himachal Pradesh, Jharkhand, Kerala, Meghalaya, Tripura, Uttarakhand, West Bengal and Puducherry.

Out of total 14338 wells, about 57.1% (8192) are showing rise and 41.7% (5983) are showing fall in water level. Remaining 1.2% (163) wells do not show any change in water level. About 40.4% (5786) wells are showing rise in the range of less than 2 m, 10.2% (1464) wells in 2 to 4 m range and 6.6% (942) wells in more than 4 m range. About 41.7% wells are showing decline in water level, among which 32.6% (4670) wells are showing fall in water level in less than 2 m range, 6.2% (890) wells in water level in 2 to 4 m range and 3.0% (423) wells in more than 4 m range. Majority of the wells showing rise/decline falls in the range of 0 to 2 m.

**ANNUAL WATER LEVEL FLUCTUATION(NOVEMBER 2022- NOVEMBER 2021)
POST-MONSOON**

The water level fluctuation of November 2022 compared to November 2021 shows that out of 15301 wells analysed, 6550 (42.8%) are showing rise and 8518 (55.7%) are showing fall in water level. Remaining 233 (1.5%) stations analysed do not show any change in water level. About 33.2% wells (5076) are showing rise in the water level in the range of less than 2 m. About 6.3% wells (963) are showing rise in water level in 2 to 4 m range and 3.3% wells (511) showing rise in water level more than 4 m range. About 55.7% wells are showing decline in water level, out of which 6872 wells (44.9%) are showing decline in water level in less than 2 m range. Majority of the wells showing rise/decline falls in the range of 0 to 2 m(Plate-XIII, Annexure-VII).

A comparison of depth to water level of November 2022 compared to November 2021 is presented in the form of water level fluctuation map reveals that in general, there is fall in water level in the central Peninsula India and western part of the country. Rise in water level is dominantly seen in all the states/UTs except in the states of Andhra Pradesh, Assam, Chhattisgarh, Haryana, Madhya Pradesh, Punjab, Rajasthan, Telangana, and Andaman & Nicobar Islands. Decline is mostly in the range of 0 to 2 m. There is fall in water level in Bihar, Odisha, Maharashtra, Karnataka, Kerala, Karnataka, Tamil Nadu West Bengal, Puducherry and Arunachal Pradesh observed in scattered pockets.

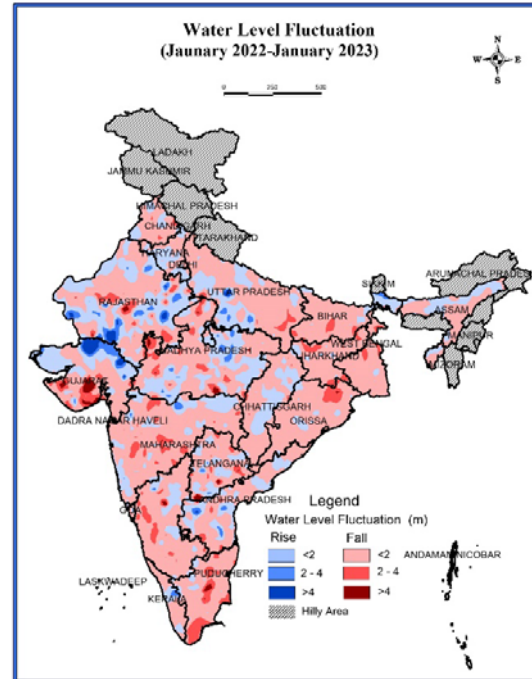

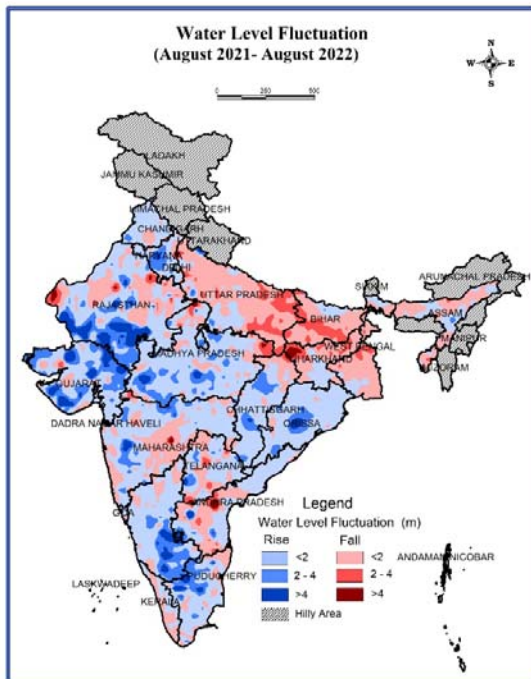

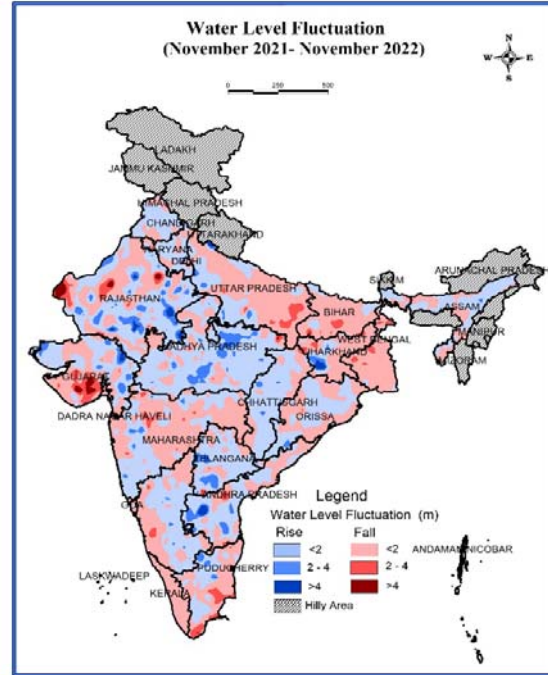

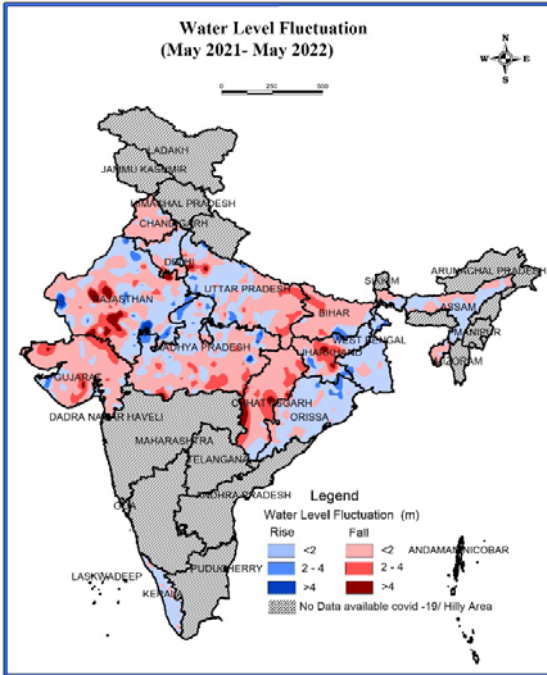

ANNUAL WATER LEVEL FLUCTUATION (JANUARY 2023- JANUARY 2022)

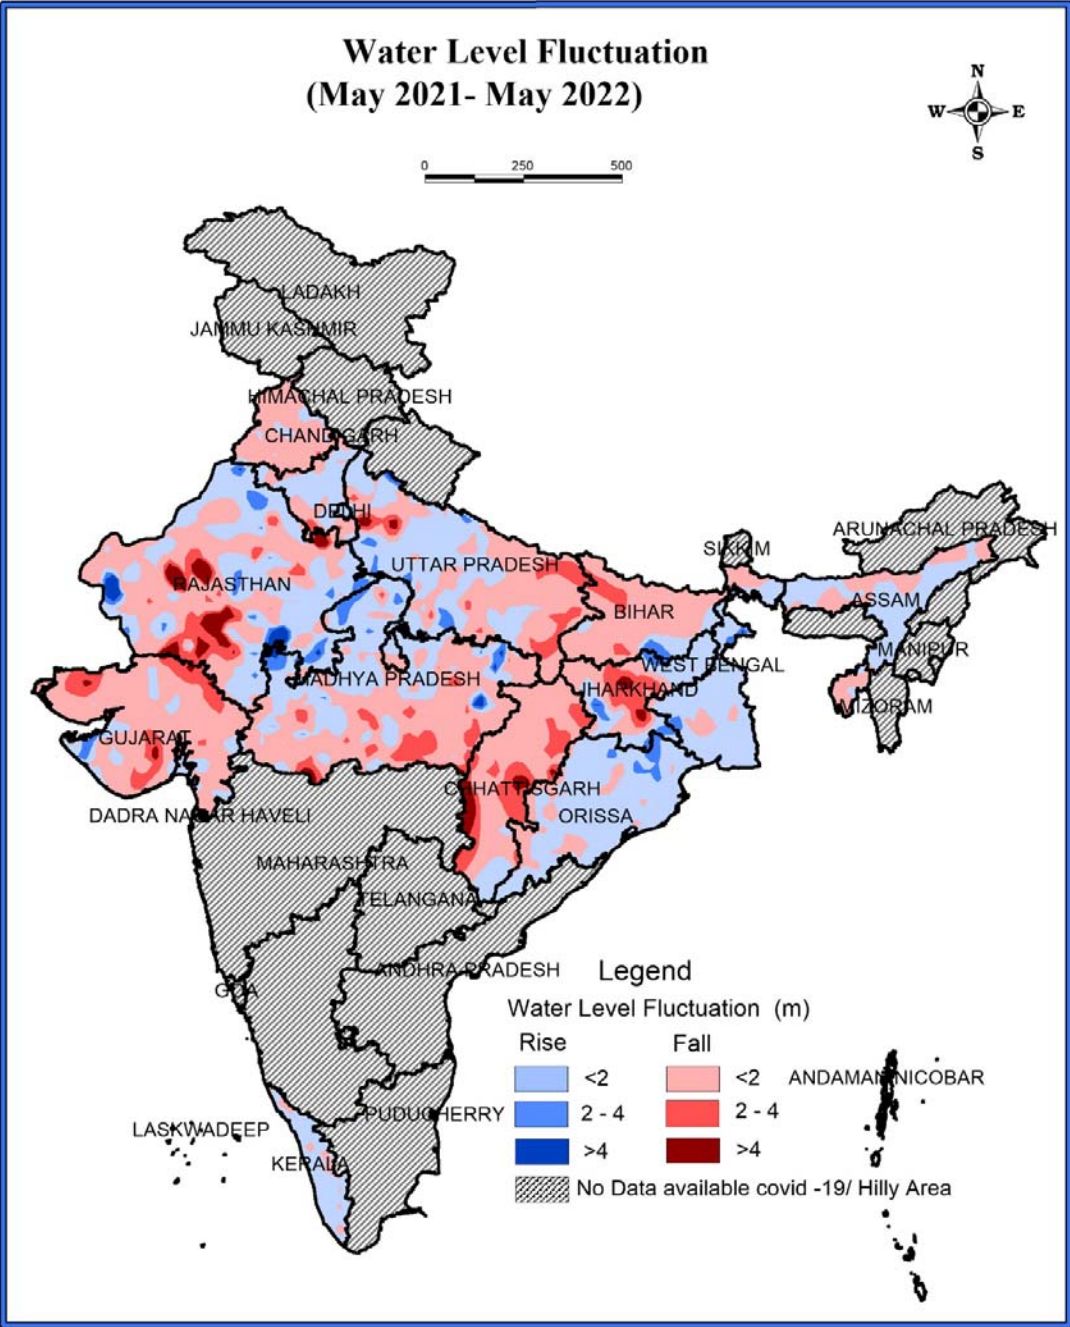

The water level fluctuation of January 2023 to January 2022 shows that out of 14314 wells analysed, 4639(32.4%) are showing rise and 4609 (66.4%) are showing fall in water level. Remaining 169 (1.2%) stations analysed do not show any change in water level. About 25.5% (3645) wells are showing rise in the water level in the range of less than 2 m. About 4.3% (621) wells are showing rise in water level in 2 to 4 m range and 2.6% (373) wells showing rise in water level more than 4 m range. About 66.4% wells are showing decline in water level, out of which 51.8% (7413) wells are showing decline in water level in less than 2 m range. About 9.9% (1412) wells are showing decline in water level in 2 to 4 m range and 4.8% (681) wells are showing decline in water level more than 4 m range. Majority of the wells showing rise/decline falls in the range of 0 to 2 m(Plate-XIV, Annexure-VIII).

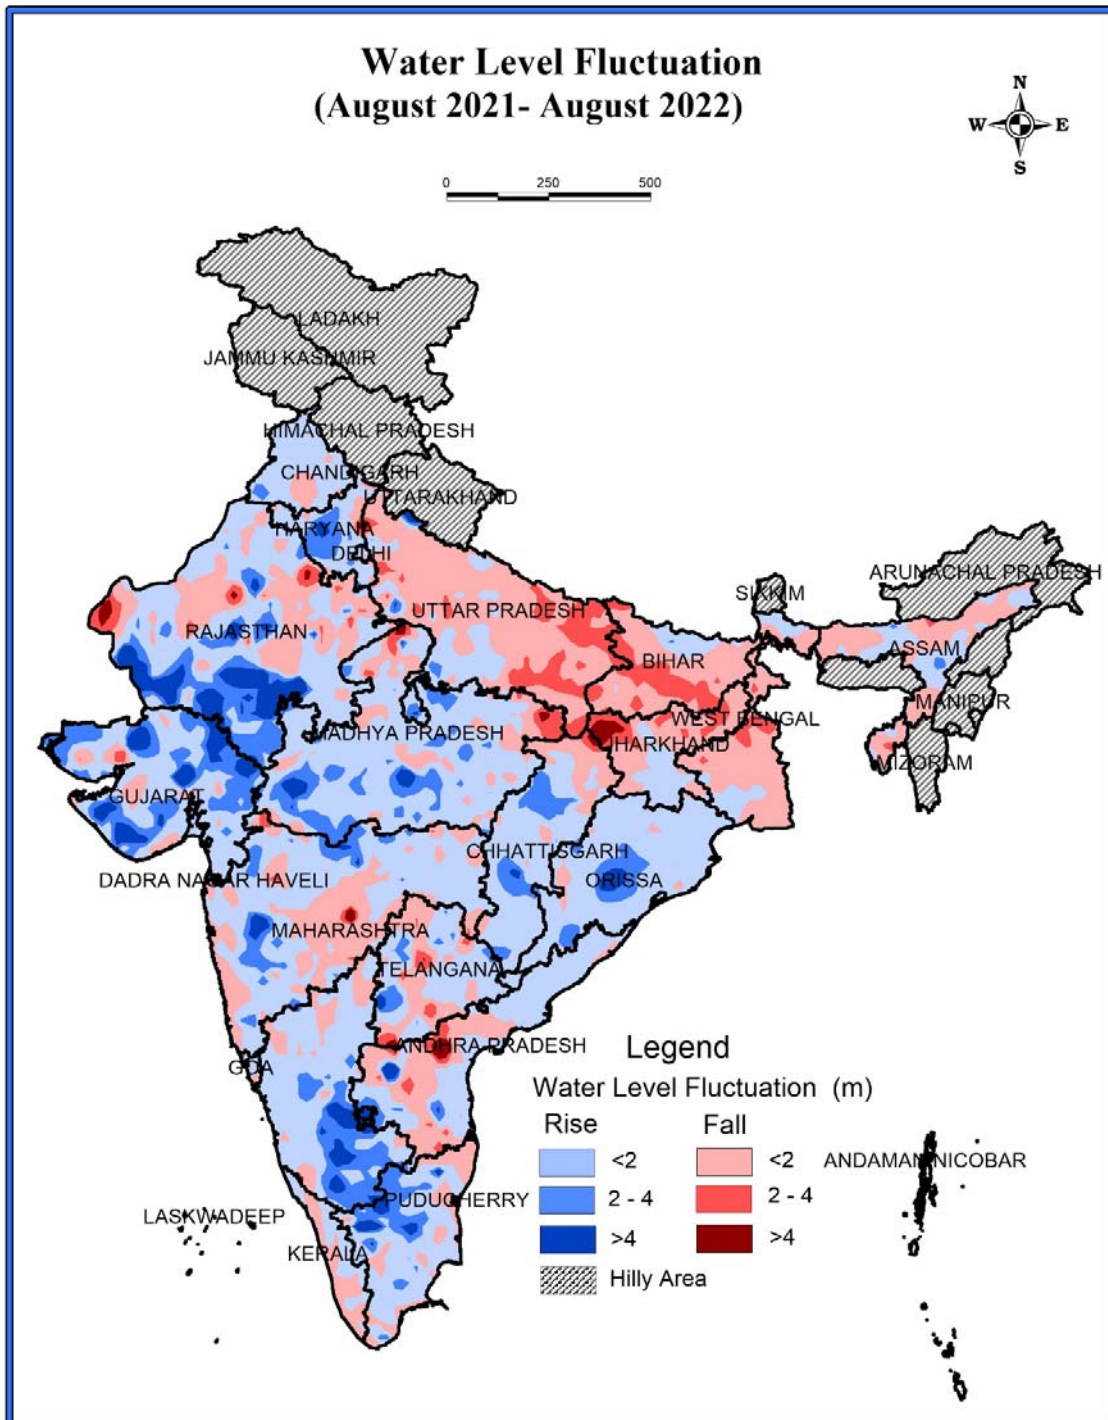

Fall in water level is observed in almost all states and UTs. Fall is mostly in the range of 0 to 2 m, although fall in the range of more than 2 m is also prevalent in all the states in small patches.

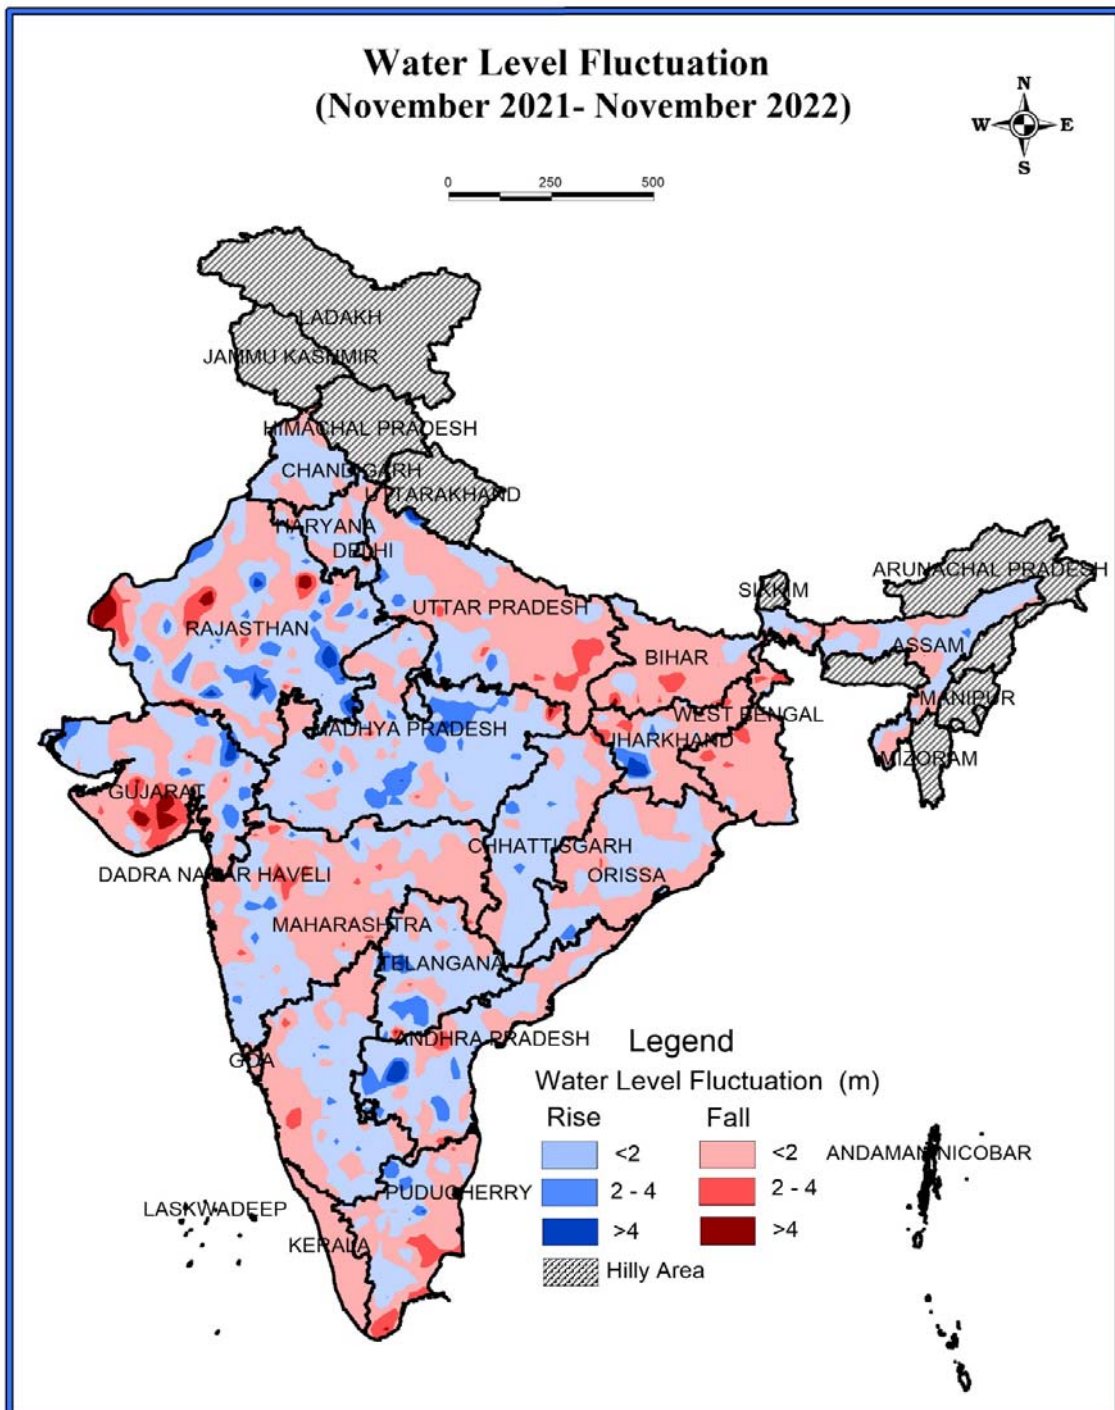

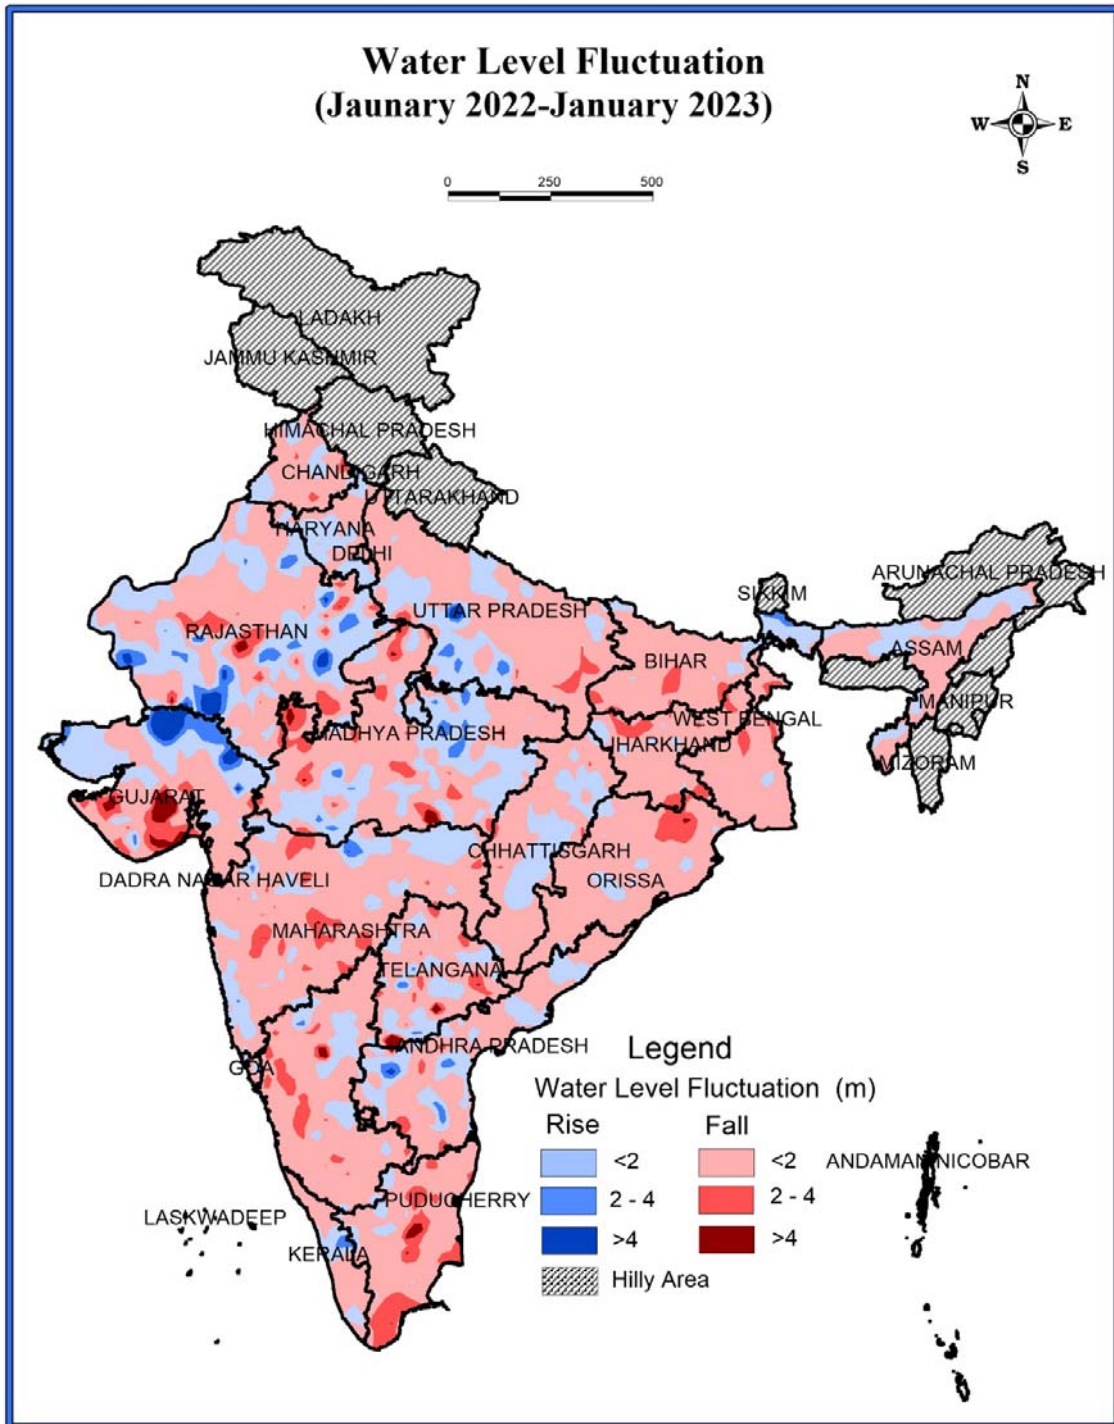

ANNUAL WATER LEVEL FLUCTUATION AT A GLANCE

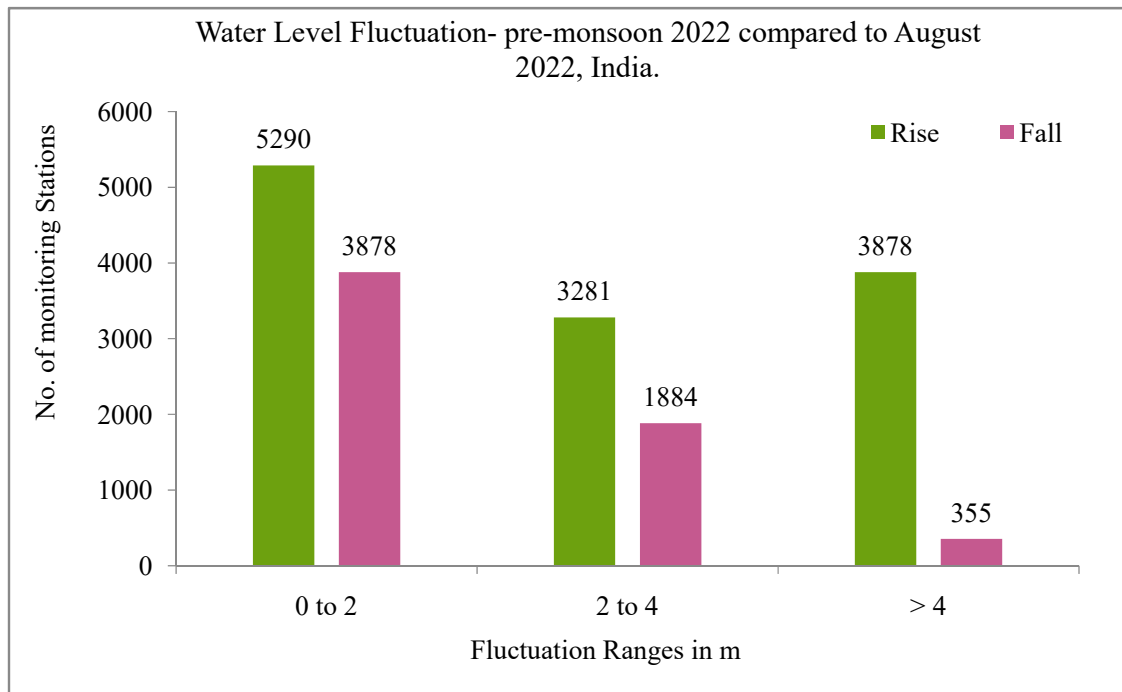

3.2.3 SEASONAL WATER LEVEL FLUCTUATION IN UNCONFINED AQUIFER

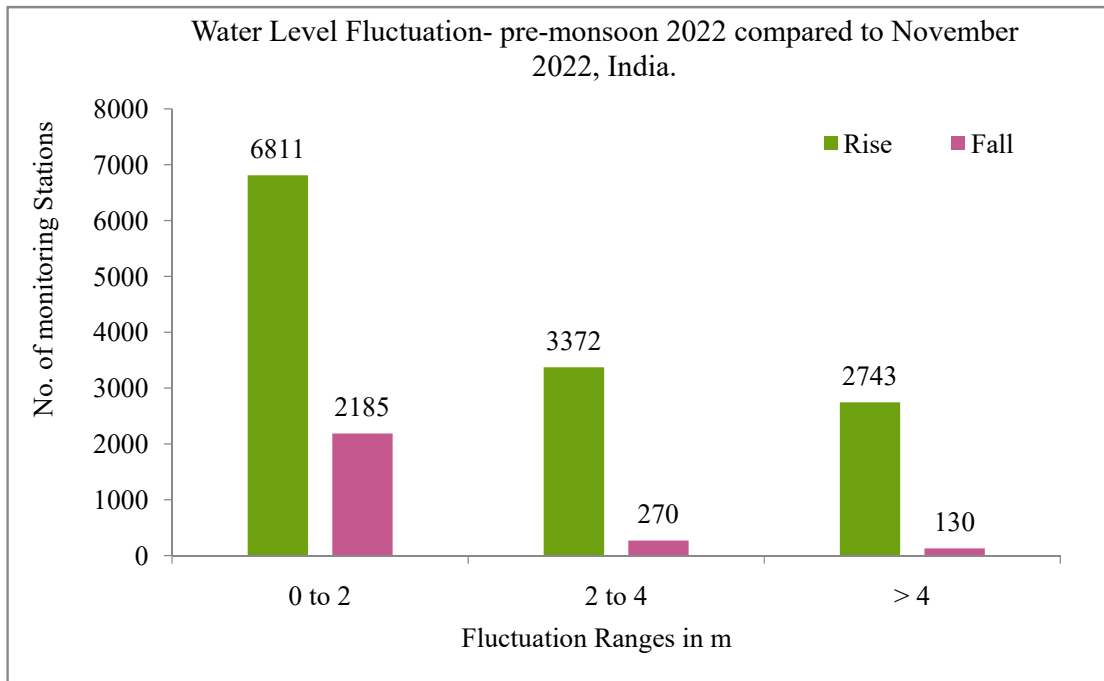

SEASONAL WATER LEVEL FLUCTUATION (PRE-MONSOON 2022- AUGUST 2022)

A comparison of depth to water level of pre-monsoon 2022 with August 2022 indicates that out of analysed 14945 wells, about 83.3% (12449) of wells are showing rise in water levels, out of which 35.4%(5290) wells are showing rise of less than 2 m range. About 22.0% (3281) wells are showing rise in water level in the range of 2 to 4 m and another 25.9 %(3878) wells are showing rise in water in range of more than 4 m. Similarly,16.0 % (2398) wells are showing decline in water level, out of which 12.6% (1884) wells are showing decline in water in the range of 0 to 2 m, 2.4% (355) wells are showing fall in water level in the range of 2 to 4 m and the remaining 1.1 % (159) wells are showing fall in water level of more than 4 m (**Plate-XVI, Annexure-IX**). Rise in water level more than 4 m is mostly prominent all over the country covering in all the states. Fall of 2 to 4m or more is observed in Haryana, Jharkhand, Punjab, Madhya Pradesh, parts of Maharashtra, Gujarat and Rajasthan.

SEASONAL WATER LEVEL FLUCTUATION (PRE-MONSOON 2022- NOVEMBER 2022)

A comparison of depth to water level of pre-monsoon 2022 with November 2022 indicates that about 82.8% of wells (12926) analysed are showing rise in water levels, out of which 43.7% (6811) wells are showing rise of less than 2 m range. About 21.6 % (3372) wells are showing rise in water level in the range of 2 to 4 m and another 17.6 % (2743) wells are showing rise in water in range of more than 4 m. About 16.6% wells are showing decline in water level, out of which 14.0 % wells (2185) are showing decline in water in the range of 0 to 2 m. Rise in water level is prominent in all the states of the country. Rise in water level of more than 4 m is prominent in the most of the states such as Chhattisgarh, Gujarat, Himachal Pradesh Jharkhand, Karnataka, Madhya Pradesh, Maharashtra, Odisha, Rajasthan, Tamil Nadu, Telangana, Uttarakhand, Uttar Pradesh (Plate XVII, Annexure X).

SEASONAL WATER LEVEL FLUCTUATION (PREMONSOON 2022 JANUARY 2023)

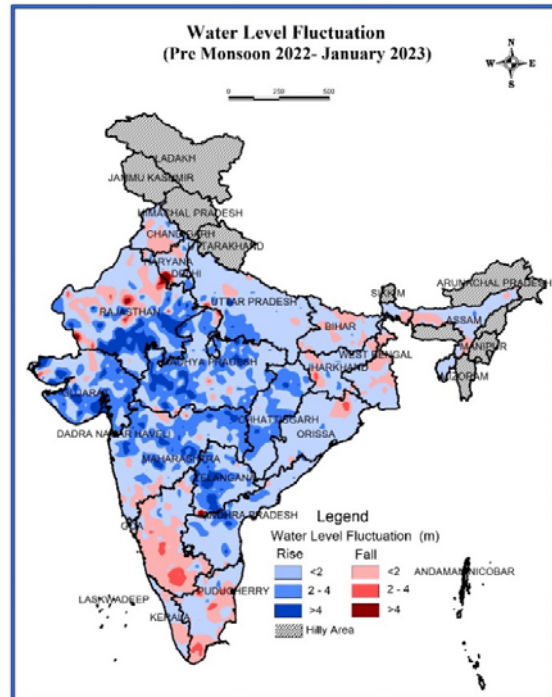

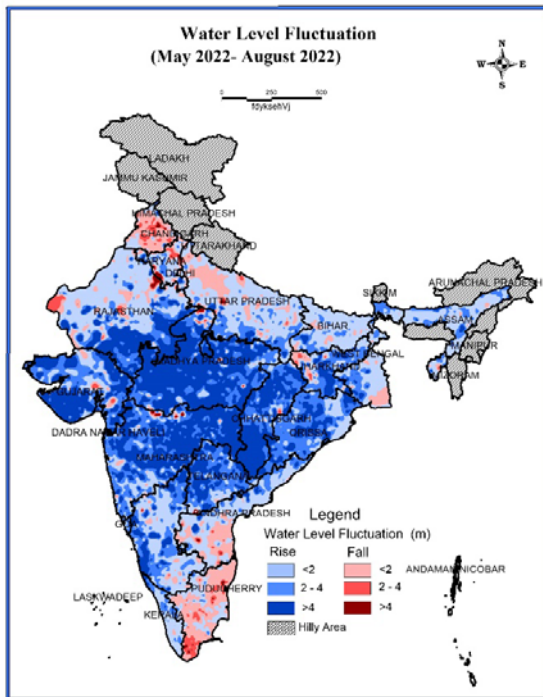

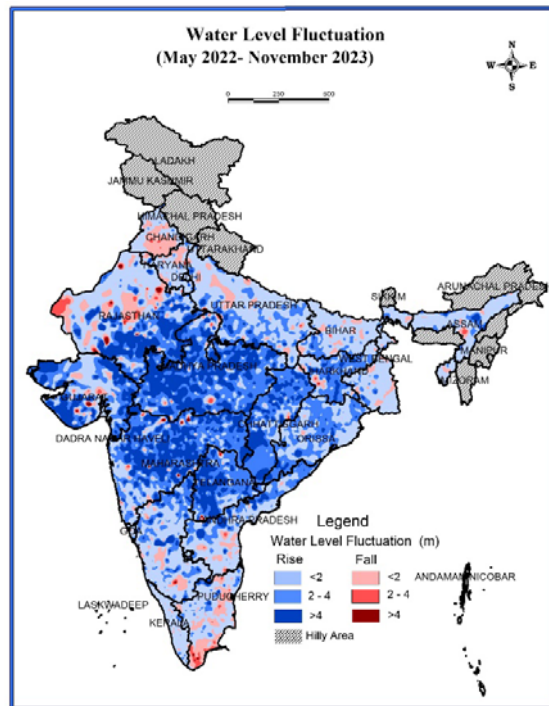

The water level fluctuation of pre-monsoon 2022 with January 2023 indicates that out of 14333 wells analysed, 9880 (68.9%) are showing rise and 4350 (30.3%) are showing fall in water level. Remaining 103 (0.8%) wells analysed do not show any change in water level. About 43.9% (6292) wells are showing rise in the water level in the range of less than 2 m.

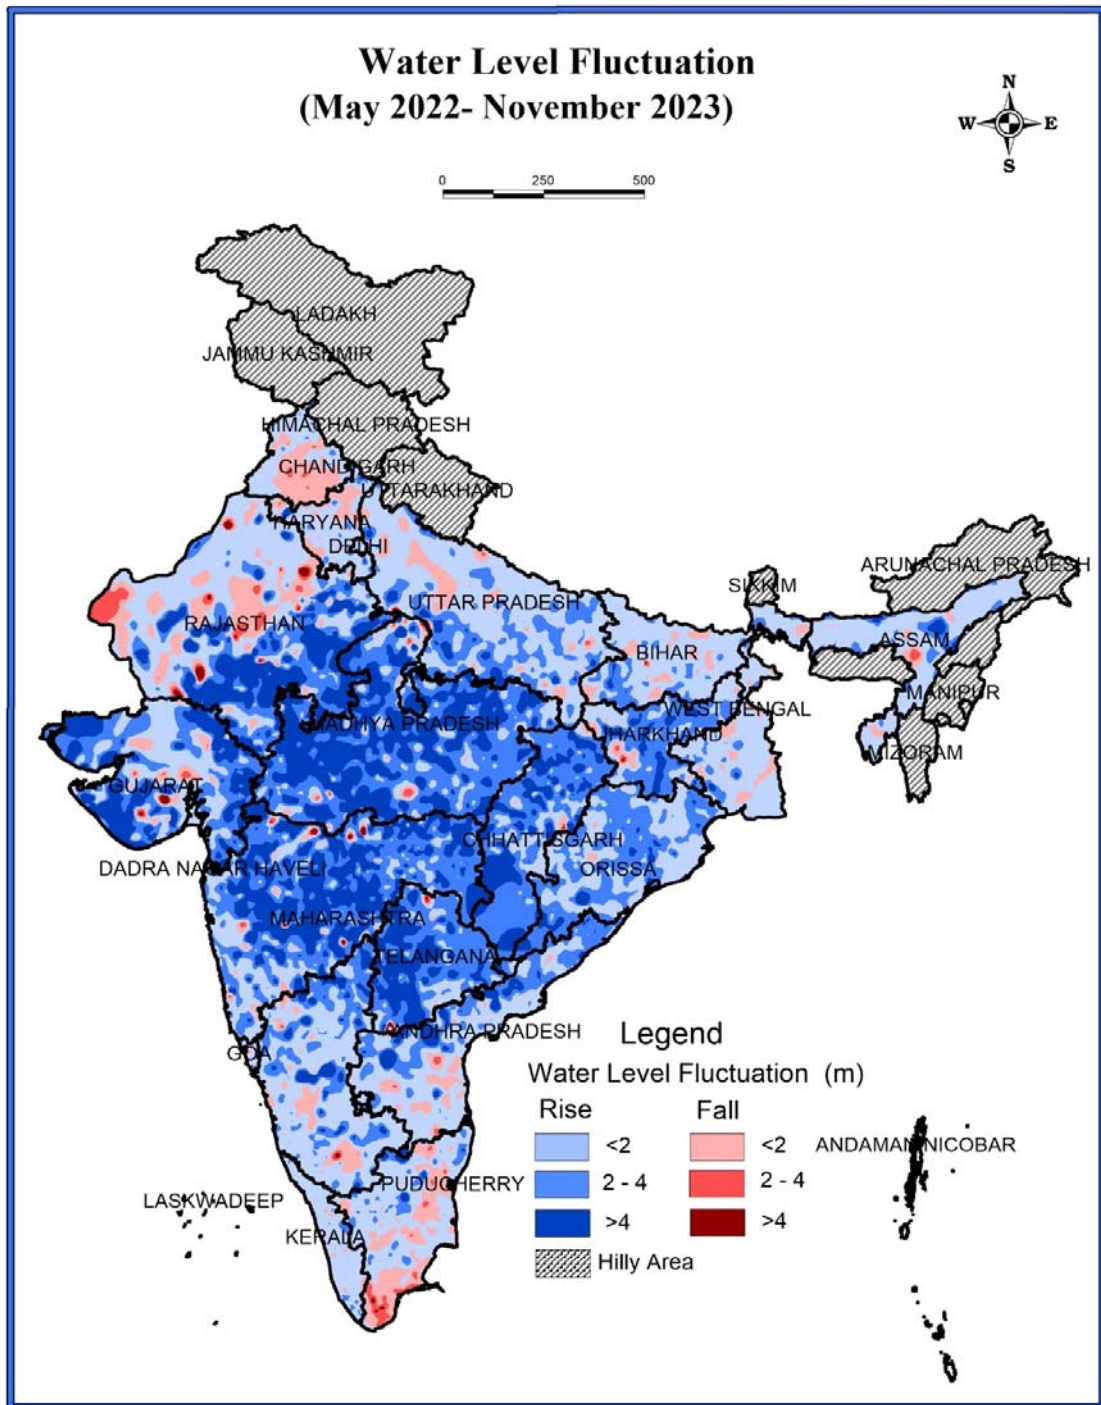

About 15.1% (2158) wells are showing rise in water level in 2 to 4 m range and another 10.0% (1430) wells showing rise in water level more than 4 m range. About 30.3% (4350) wells are showing decline in water level, out of which 23.8% (3418) wells are showing decline in water level in less than 2 m range. Majority of the wells showing rise/decline falls in the range of 0 to 2 m (**Plate XVIII, Annexure XI**).

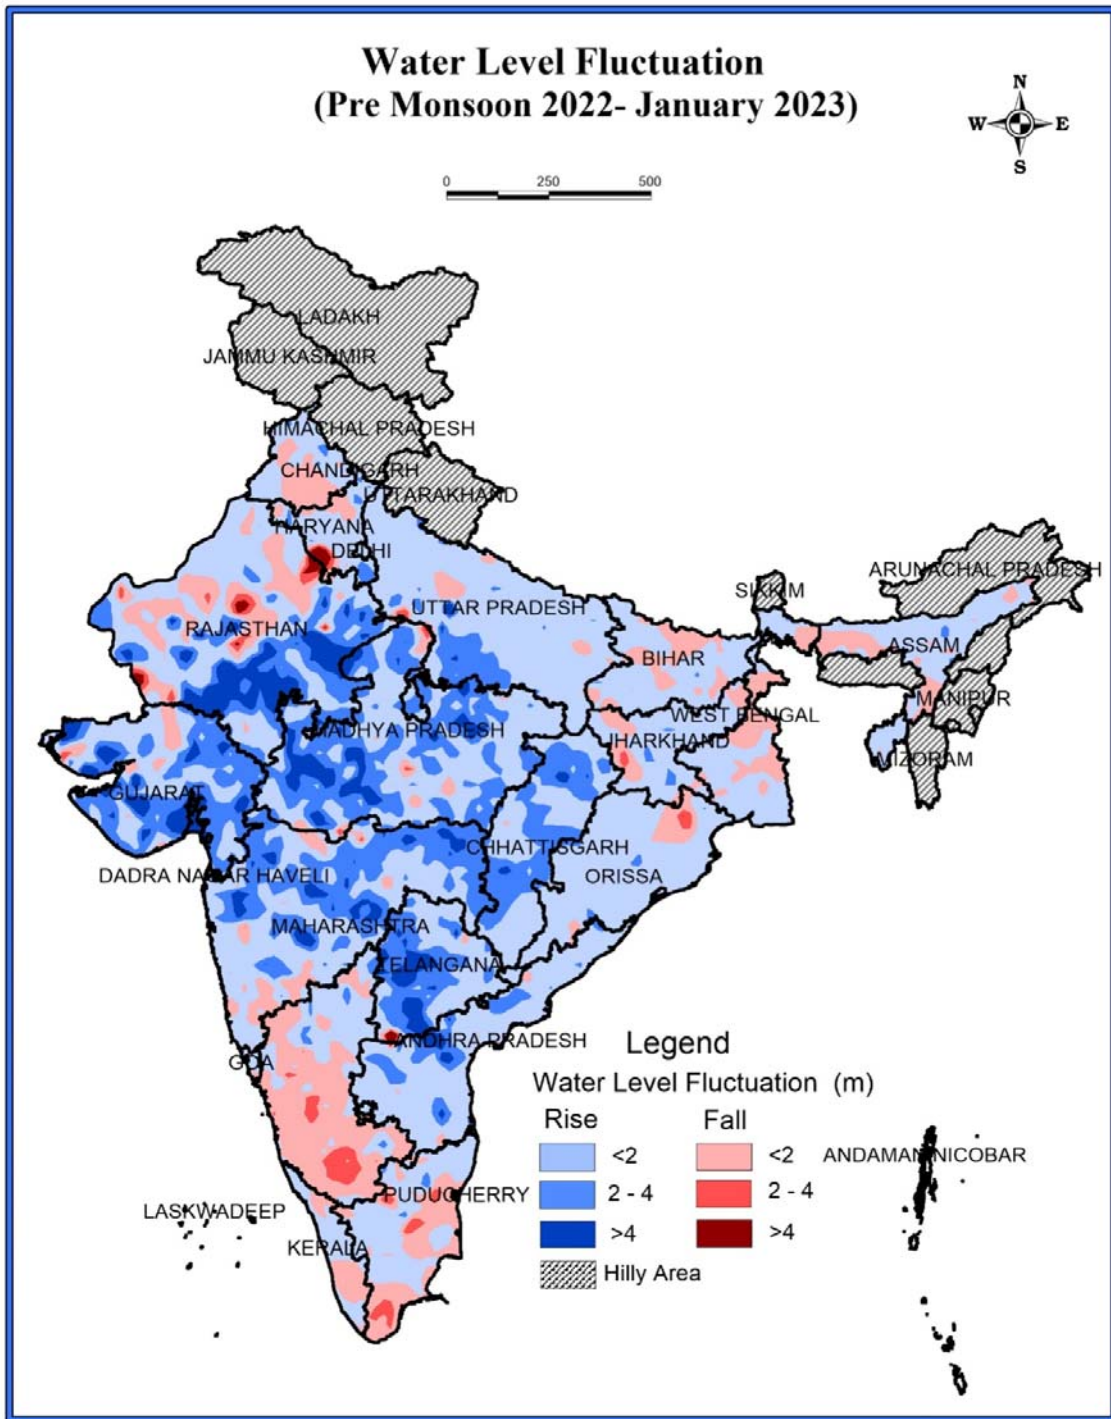

A comparison of depth to water level of pre-monsoon 2022 with January 2023 with reveals that in general, there is rise in water level in almost the entire country, except in few states. Rise in water level is prominent in all the states of the country. Rise in water level is prominent in the range of 0 to 2 m.

SEASONAL WATER LEVEL FLUCTUATION AT A GLANCE

3.2.4 DECADAL WATER LEVEL FLUCTUATION

WATER LEVEL FLUCTUATION WITH DECADAL MEAN (PRE-MONSOON 2012 TO 2021) TO PRE-MONSOON 2022

A comparison of depth to water level of pre-monsoon 2022 with decadal mean of pre-monsoon (2012-2021) indicate that 9129 (64.3%) of wells are showing rise in water level, out of which 43.7% (6197) wells are showing rise of less than 2 m. About 12.0% (1707) wells are showing rise in water level in the range of 2 to 4 m and about 8.6% (1225) wells are showing rise in water level in the range of more than 4 m. 5037 (35.5%) wells are showing decline in water level, out of which 25.6% wells are showing decline in water in the range of 0 to 2 m. 6.2% wells are showing decline in water level in 2 to 4 m range and remaining 3.7% (529) are in the range of more than 4 m. A comparison of depth to water level of pre-monsoon 2022 with decadal mean of pre-monsoon (2012-2021) indicates that 64.3% of the analysed wells show rise in water level whereas 35.5% wells show decline in water level. Less than 0.5% well show no change. Rise and decline in water level are primarily in the 0 to 2 m range. More than 50% of the wells analysed have registered rise in groundwater level, mostly in the range of 0 to 4 m, in all the states/UTs.

Decline of more than 4 m has also been observed in pockets in the states/UTs of Chhattisgarh, Delhi, Gujarat, Haryana, Maharashtra, Punjab, Rajasthan, Telangana and Uttarakhand(**Plate-XX, Annexure-XII**).

WATER LEVEL FLUCTUATION WITH DECADAL MEAN (AUGUST 2012 TO AUGUST 2021) TO AUGUST 2022

A comparison of depth to water level of August 2022 with decadal mean of August (2012-2021) indicate that about 64.7% (9230) of wells are showing rise in water level, out of which 43.2% (6159) wells are showing rise of less than 2 m. About 12.6% (1798) wells are showing rise in water in the range of 2 to 4 m and about 8.9% (1273) wells are showing rise in water level in the range of more than 4 m. About 35% (5014) wells are showing decline in water level, out of which 28% (3995) wells are showing decline in water in the range of 0 to 2 m. 4.5% (643) wells are showing decline in water level in 2 to 4 m range and remaining 2.6% (376) are in the range of more than 4 m. A comparison of depth to water level of August 2022 with decadal mean of August (2012-2021) indicates that 43.2% of the wells analysed have registered rise in groundwater level, mostly in the range of 0 to 2 m, in the states/UTs namely Arunachal Pradesh, Assam, Bihar, Chandigarh, Dadra Nagar Haveli, Delhi, Haryana, Kerala, Meghalaya, Pondicherry, Punjab, Rajasthan, Tamil Nadu, Uttar Pradesh and West Bengal. Decline of more than 4 m has also been observed in pockets in the states/UTs of Chandigarh, Chhattisgarh, Delhi, Gujarat, Haryana, Punjab, Rajasthan, Tamil Nadu, Telangana, Uttar Pradesh, Uttarakhand and West Bengal(Plate XXI, Annexure XIII).

WATER LEVEL FLUCTUATION WITH DECADAL MEAN (POST- MONSOON-2012 TO POST-MONSOON-2021) TO POST-MONSOON-2022

A comparison of depth to water level of post-monsoon 2022 with decadal mean of post-monsoon (2012-2021) indicate that, out of 14986 wells analysed, 8979 (59.9%) of wells are showing rise in water level, out of which 43.9% (6582) wells are showing rise of less than 2 m. About 10.2% (1530) wells are showing rise in water level in the range of 2 to 4 m and about 5.8% (867) wells are showing rise in water level in the range of more than 4 m. About 5996 (40.0%) wells showing decline in water level, 32.2% (4904) wells are showing decline in water in the range of 0 to 2 m. 4.8%(714) wells are showing decline in water level in 2 to 4 m range and remaining 2.5% (378) are in the range of more than 4 m (**Plate XXII, Annexure-XIV**).

A comparison of depth to water level of post-monsoon 2022 with decadal mean of post-monsoon(2012-2021) indicates that 43.9% of the wells have registered rise in groundwaterlevel, mostly in the range of 0 to 2 m. Rise in water level is widespread in southern India comprising of Maharashtra, Telangana, Andhra Pradesh, Gujarat, Bihar, Jharkhand, eastern Uttar Pradesh, Tamil Nadu, Karnataka and Kerala.Fall in water level within 0 to 2 m range is observed in Madhya Pradesh, Maharashtra, Goa, Chhattisgarh, Odisha and parts of NE states in patches. Decline of more than 4 m has also been observed in pockets in the states/UTs of Chandigarh, Delhi, Gujarat, Haryana, Punjab, Rajasthan and western Uttar Pradesh.

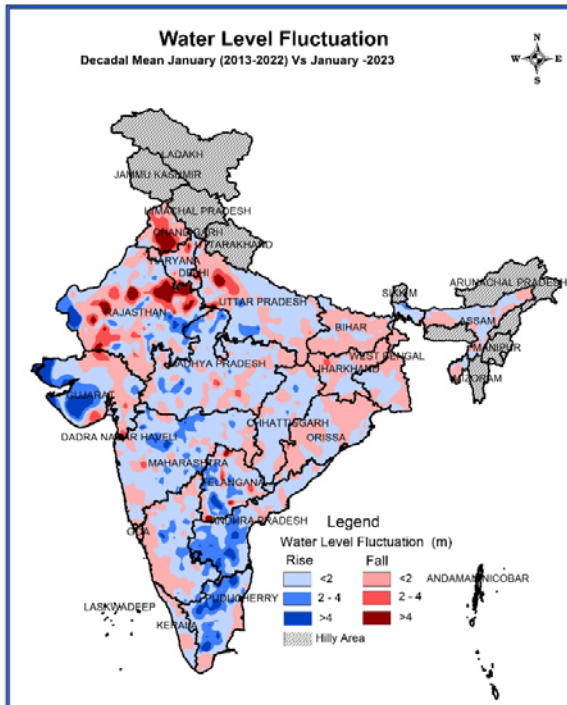

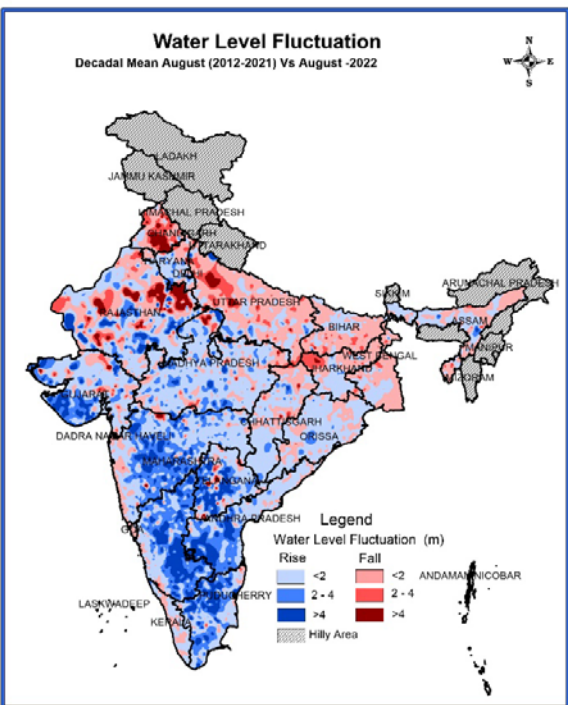

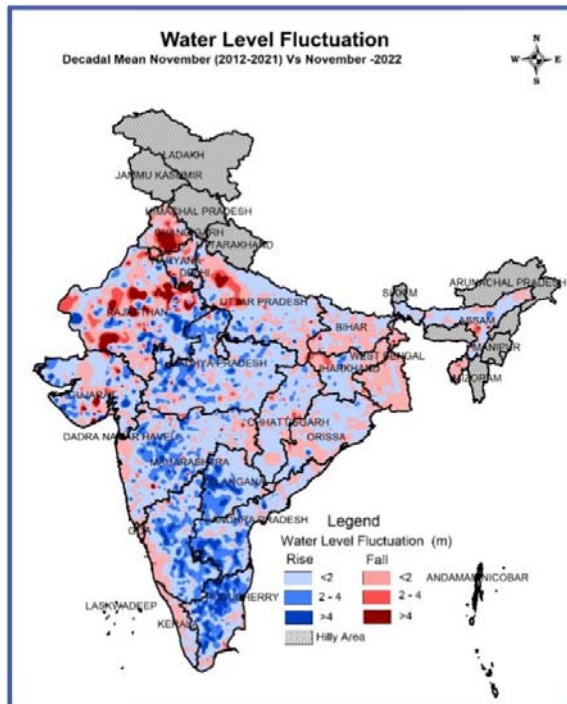

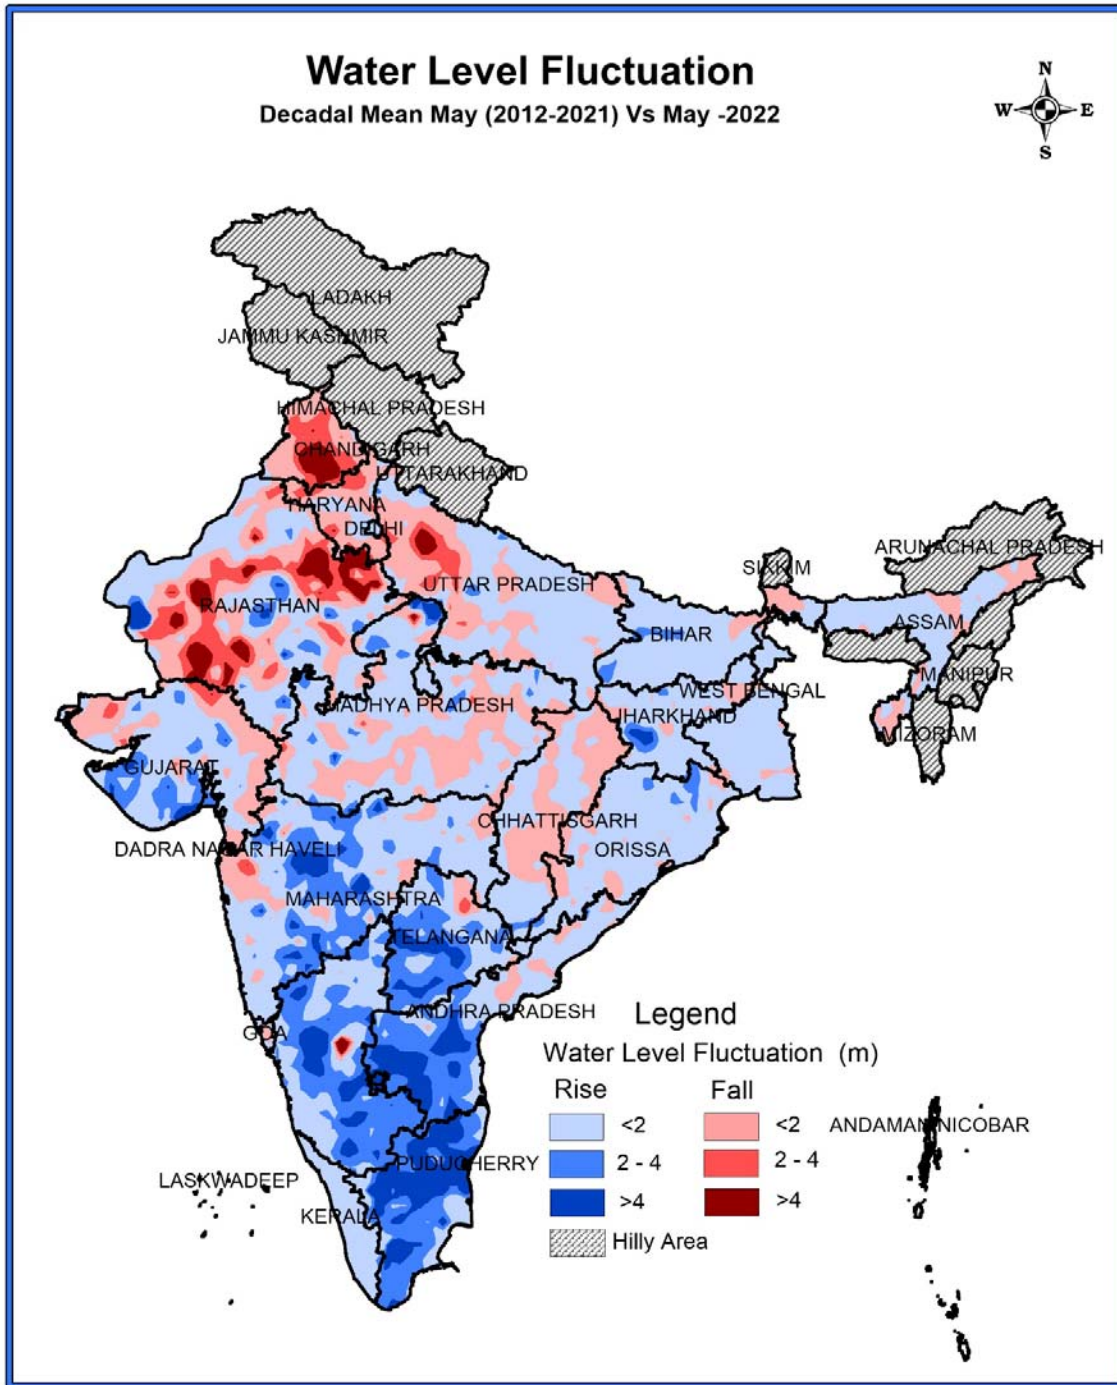

WATER LEVEL FLUCTUATION WITH DECADAL MEAN (JANUARY 2013 TO JANUARY 2022) TO JANUARY 2023

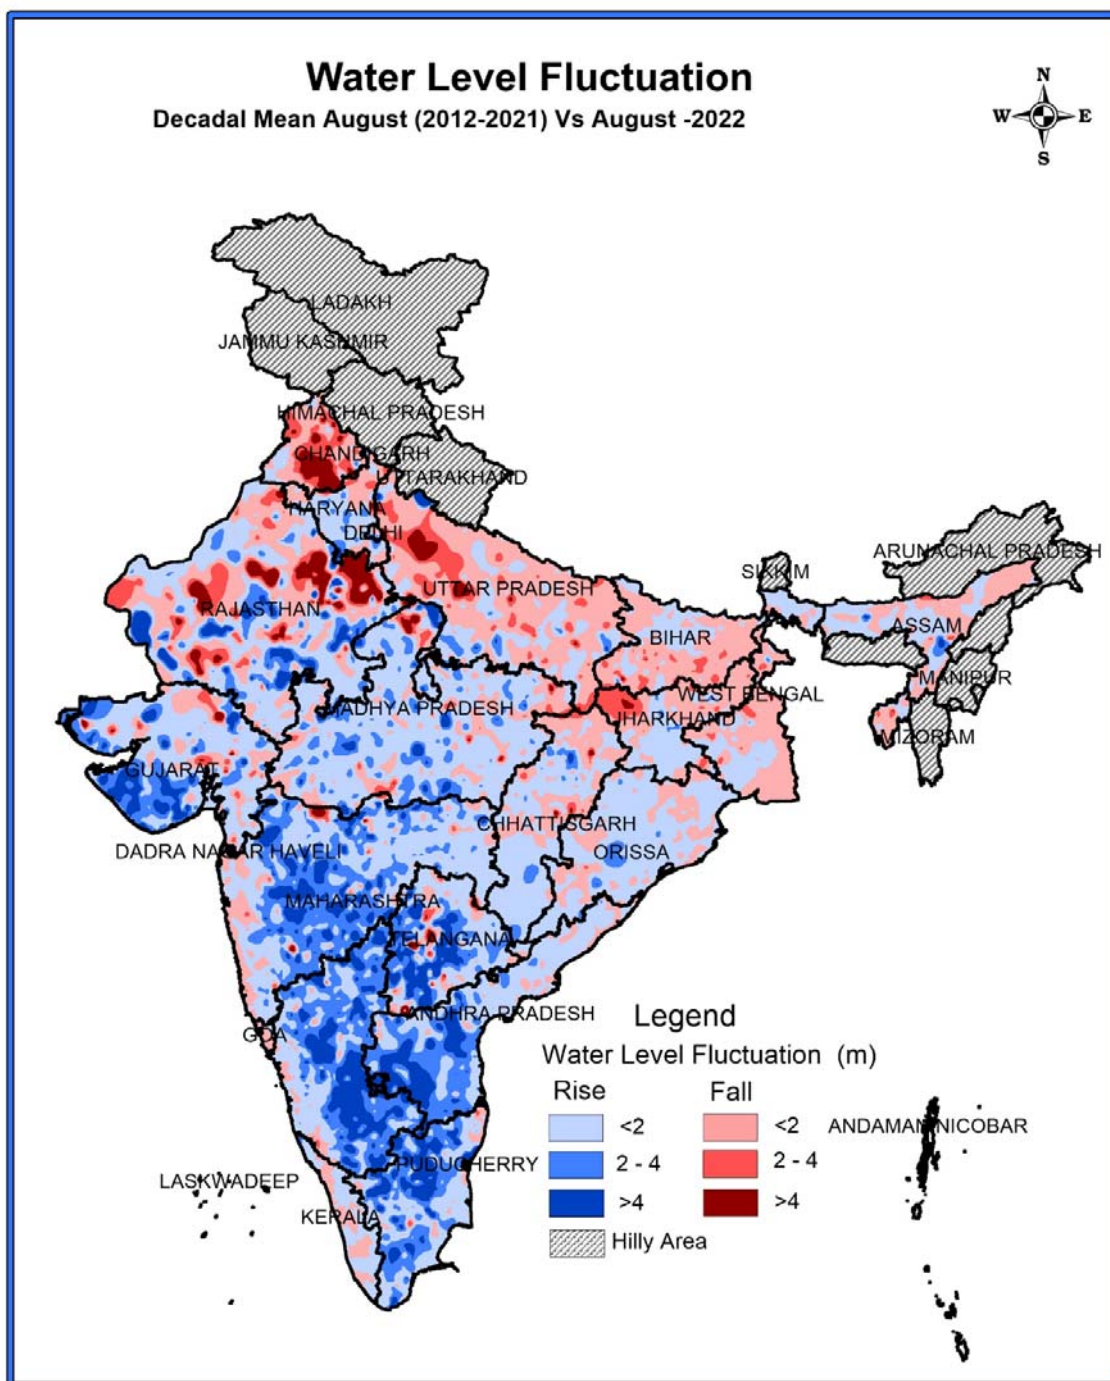

A comparison of depth to water level of January 2023 with decadal mean of January (2013-2022) indicates that out of 14283 well analysed, 8073 (about 56.5%) of wells are showing rise in water level, out of which 41.8% (5966) wells are showing rise of less than 2 m. About 9.1% (1305) wells are showing rise in water level in the range of 2 to 4 m and only 5.6% (802) wells are showing rise in the range of more than 4 m. Total 6201 (about 43.3%) wells showing decline in water level, 35.1% (5019) wells are showing decline in water in the range of 0 to 2 m. 5.6% (802) wells are showing decline in water level in 2 to 4 m range and remaining 2.9% (410) are in the range of more than 4 m. Rise in water level is observed in major portions of peninsular India in 0 to 4 m range and more than 4 m is seen in southern states Telangana, Andhra Pradesh, Kerala and Tamil Nadu. Decline in water level is observed in north eastern states Arunachal Pradesh, Tripura, Assam. In rest of India fall in water level is recorded in Bihar, Chandigarh, Goa, Punjab, Karnataka, Odisha and Rajasthan (**Plate XXIII, Annexure-XV**).

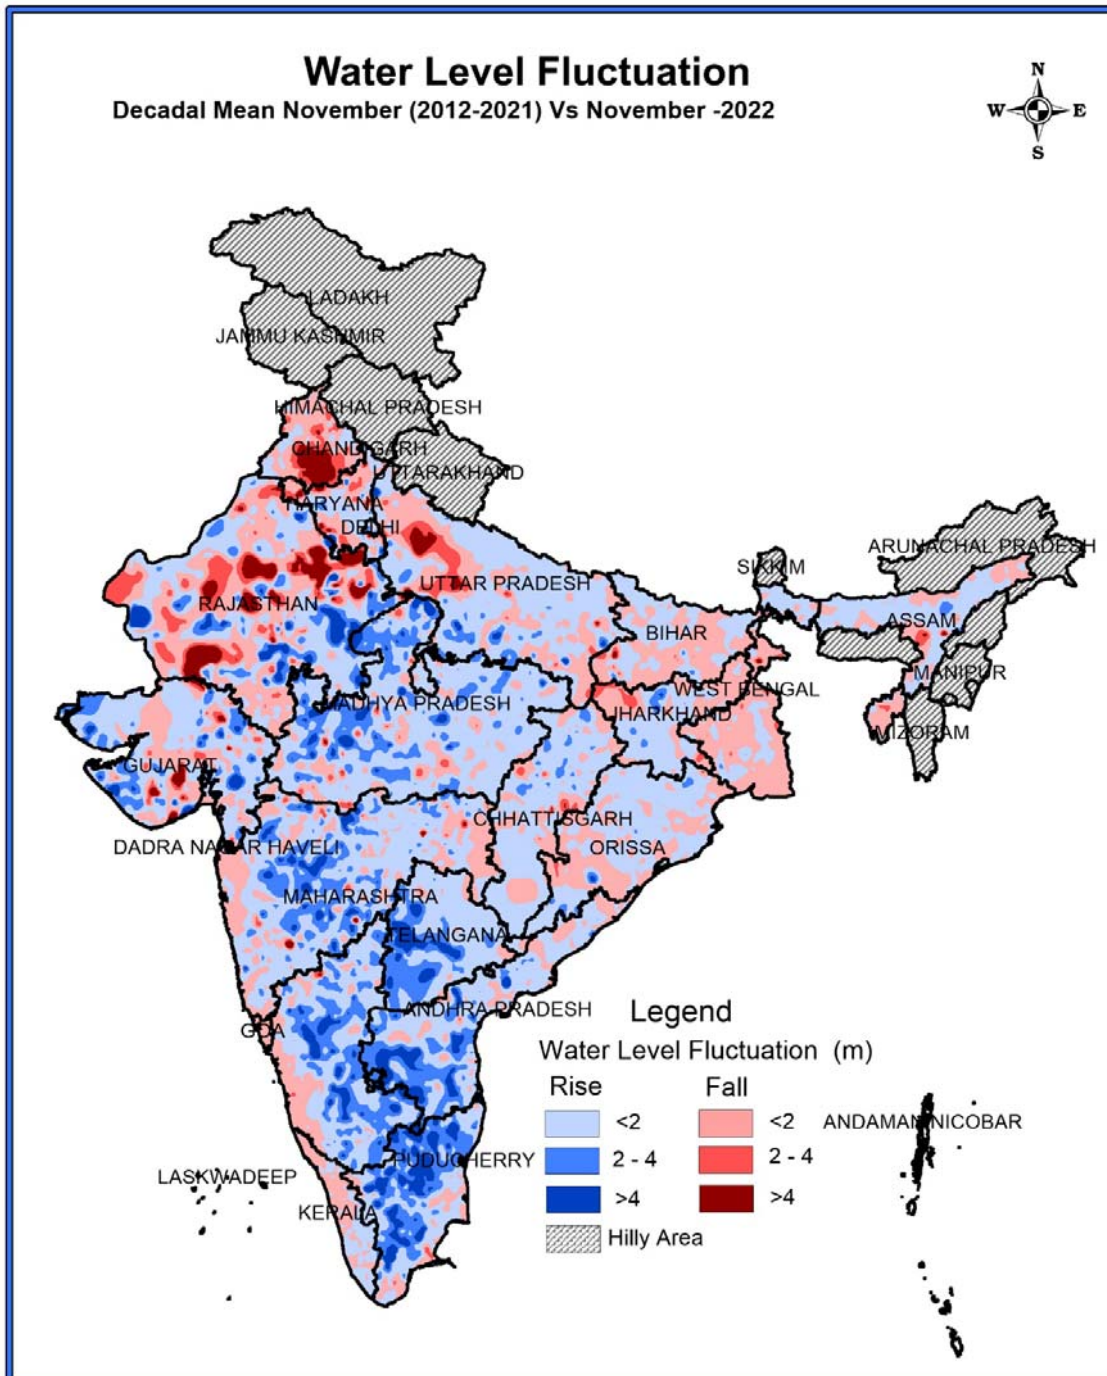

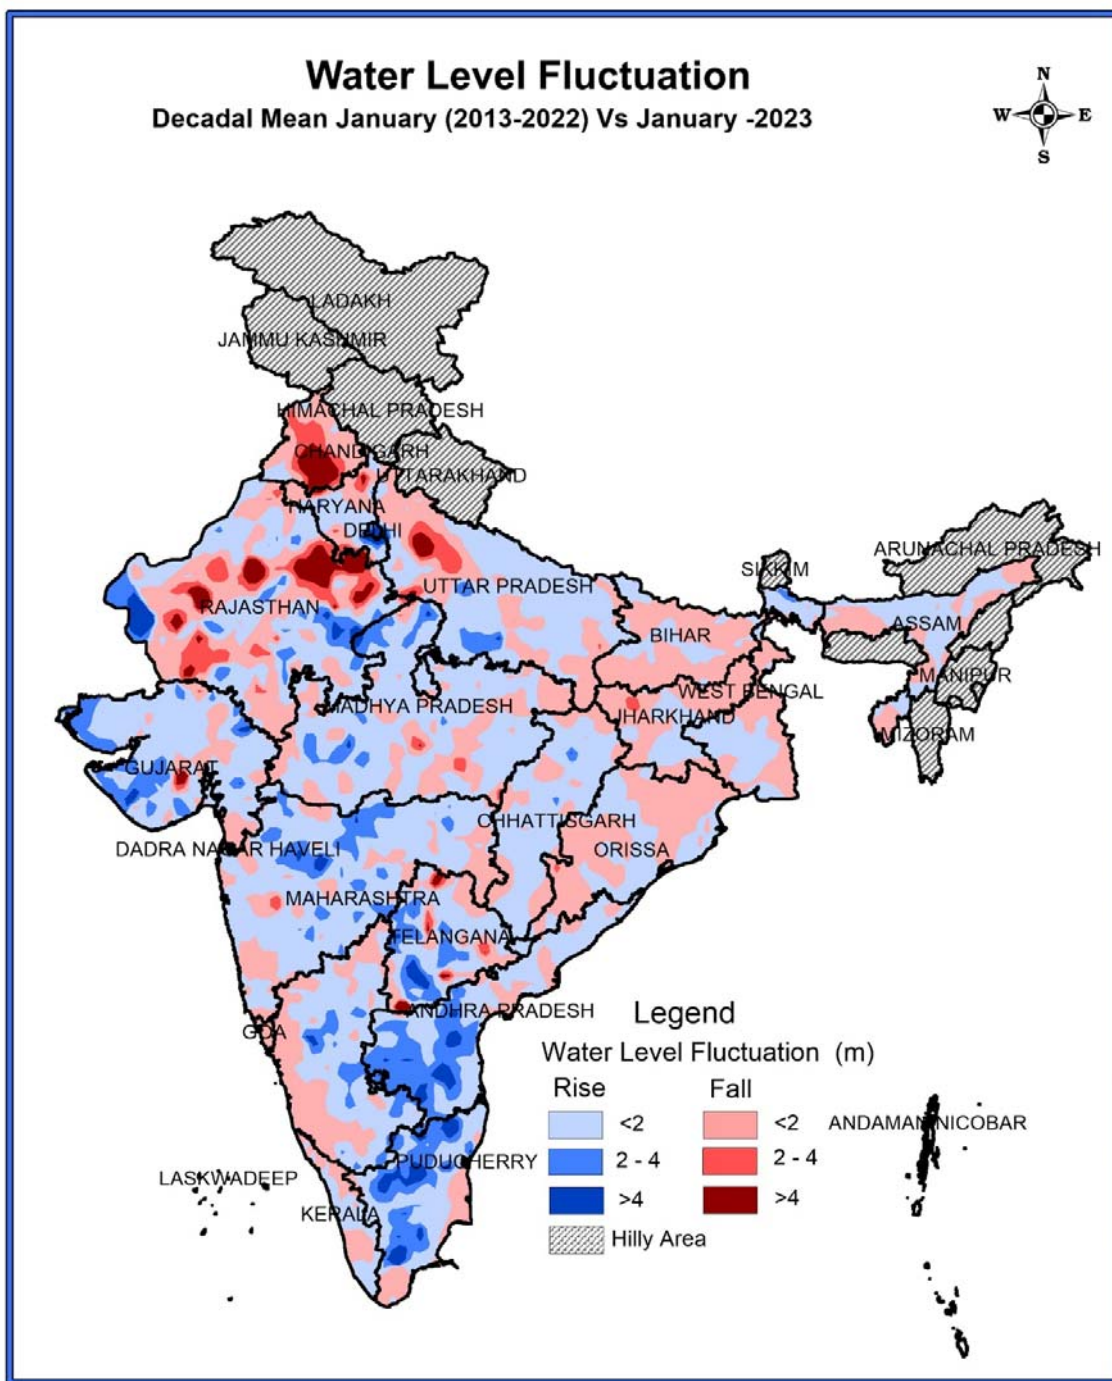

DECADAL WATER LEVEL FLUCTUATION AT A GLANCE

3.3 GROUNDWATER REGIME IN DEEPER AQUIFER

3.3.1 DEPTH TO WATER LEVEL IN DEEPER AQUIFER

DEPTH TO WATER LEVEL – PRE-MONSOON 2022 IN DEEPER AQUIFER

The groundwater level data (*Annexure-XVI*) of deeper aquifers for pre-monsoon 2022 indicates that out of the total 2450 wells analysed, 81 (3.3%) wells are showing water level less than 2 m bgl, 428 (17.5%) wells are showing water level in the depth range of 2 to 5 m bgl, 693 (28.3%) wells are showing water level in the depth range of 5 to 10 m bgl, 718 (29.3%) wells are showing water level in the depth range of 10 to 20 m bgl, 336 (13.7%) wells are showing water level in the depth range of 20 to 40 m bgl and the remaining 194 (7.9%) wells are showing water level more than 40 m bgl. Thus, the general range of water level is between 5 to 20m. From the analysis of the data, it's also revealed that deeper piezometric level of more than 40 m is observed in Andhra Pradesh, Chhattisgarh, Gujarat, Haryana, Karnataka, Kerala, Madhya Pradesh, Maharashtra, Punjab, Tamil Nadu, Telangana, Uttar Pradesh, West Bengal, Delhi and Puducherry.

DEPTH TO WATER LEVEL – AUGUST 2022 IN DEEPER AQUIFER

The groundwater level data(*Annexure-XVII*) of deeper aquifers for August 2022 indicates that out of the total 2975 wells analysed, 406 (13.6%) wells are showing water level less than 2 m bgl, 762(25.6%) wells are showing water level in the depth range of 2 to 5 m bgl, 764 (25.7%) wells are showing water level in the depth range of 5 to 10 m bgl, 650 (21.8%) wells are showing water level in the depth range of 10 to 20 m bgl,251 (8.4%) wells are showing water level in the depth range of 20 to 40 m bgl and the remaining 142 (4.8%) wells are showing water level more than 40 m bgl. Thus, the general range of water level is between 2 to 10m. From the analysis of the data, it's also revealed that deeper piezometric level of 20 to 40 m is observed in Andhra Pradesh, Gujarat, Haryana, Karnataka, Madhya Pradesh, Punjab, Tamil Nadu, West Bengal, Chandigarh, Delhi and Puducherry. Deeper piezometric level of more than 40 m is observed Andhra Pradesh, Gujarat, Haryana, Punjab, Tamil Nadu, Uttarakhand, Chandigarh and Delhi.

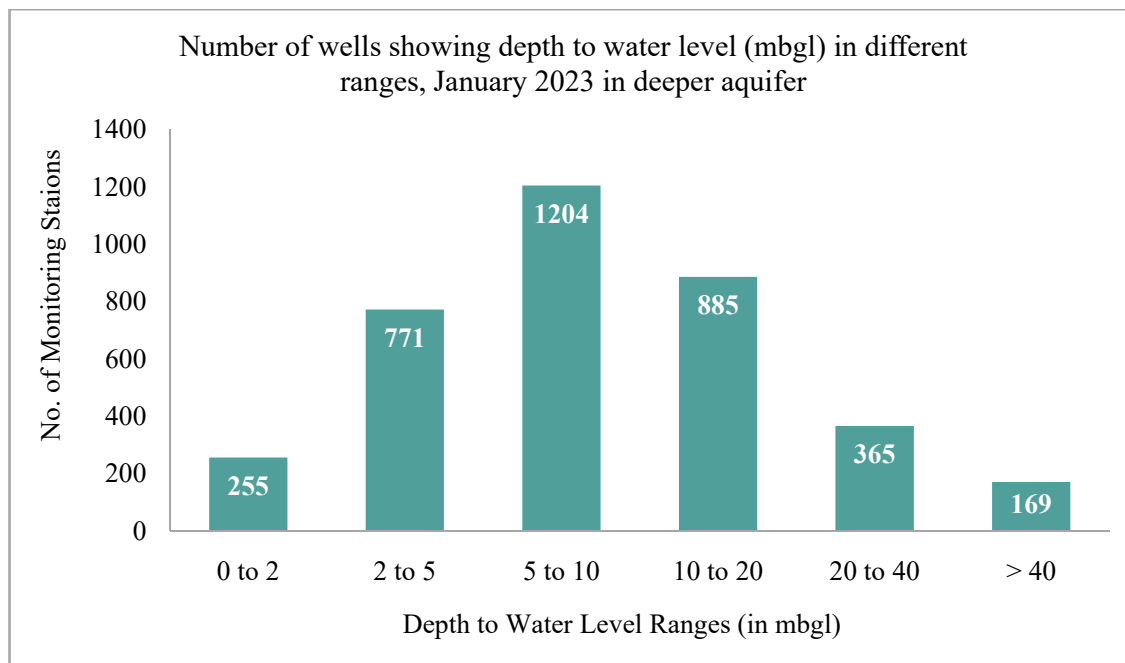

DEPTH TO WATER LEVEL – NOVEMBER 2022 IN DEEPER AQUIFER

The groundwater level data(*Annexure-XVIII*) of deeper aquifers for November 2022, indicates that out of the total 3480 wells analysed, 395(11.4%) wells are showing water level less than 2 m bgl,931(26.8%) wells are showing water level in the depth range of 2 to 5 m bgl, 962 (27.6%) wells are showing water level in the depth range of 5 to 10 m bgl, 730 (21.0%) wells are showing water level in the depth range of 10 to 20 m bgl,297 (8.5%) wells are showing water level in the depth range of 20 to 40 m bgl and the remaining 165 (4.7%) wells are showing water level more than 40 m bgl. Thus, the general range of water level is between 2 to 10m. From the analysis of the data, it's also revealed that deeper piezometric level of 20 to 40 m is observed in Andhra Pradesh, Chhattisgarh, Gujarat, Haryana, Jharkhand, Karnataka, Kerala, Madhya Pradesh, Maharashtra, Odisha, Punjab, Tamil Nadu, Telangana, Uttar Pradesh, West Bengal, Chandigarh, Delhi and Puducherry;and more than 40m in Andhra Pradesh, Chhattisgarh, Gujarat, Haryana, Karnataka, Maharashtra, Punjab, Tamil Nadu, Telangana, Uttarakhand, Chandigarh and Delhi

DEPTH TO WATER LEVEL – JANUARY 2023 IN DEEPER AQUIFER

The groundwater level data (*Annexure-XIX*) of deeper aquifers for January 2023, indicates that out of the total 3649 wells analysed, 255 (7.0%) wells are showing water level less than 2 m bgl, 771 (21.1%) wells are showing water level in the depth range of 2 to 5 m bgl, 1204 (33.0%) wells are showing water level in the depth range of 5 to 10 m bgl, 885 (24.3%) wells are showing water level in the depth range of 10 to 20 m bgl, 365 (10.0%) wells are showing water level in the depth range of 20 to 40 m bgl and the remaining 169 (4.6%) wells are showing water level more than 40 m bgl. Thus, the general range of water level is between 2 to 10m. From the analysis of the data, it's also revealed that deeper piezometric level of 20 to 40 m is observed in Andhra Pradesh, Chhattisgarh, Gujarat, Haryana, Jharkhand, Karnataka, Madhya Pradesh, Maharashtra, Odisha, Punjab, Tamil Nadu, Telangana, Uttar Pradesh, West Bengal, Chandigarh, Delhi and Puducherry and more than 40 m in Andhra Pradesh, Gujarat, Haryana, Karnataka, Madhya Pradesh, Maharashtra, Punjab, Tamil Nadu, Telangana, Uttarakhand, Chandigarh and Delhi.

3.3.2 ANNUAL WATER LEVEL FLUCTUATION IN DEEPER AQUIFER

ANNUAL WATER LEVEL FLUCTUATION (PREMONSOON 2022 - PREMONSOON 2021)

A comparison of depth to water level of pre-monsoon 2022 with pre-monsoon 2021 reveals that out of total 1054 wells analysed (*Annexure-XX*), 579 (54.9%) of wells are showing rise in water level, among which 33.4% (352) wells are showing rise of less than 2 m. About 10.1% (106) wells are showing rise in water level in the range of 2 to 4 m and 11.5% (121) wells are showing rise in the range of more than 4 m. Among the 473 (44.9%) wells showing decline in water level, 28.5% (300) wells are showing decline in water in the range of 0 to 2 m. 8.1% (85) wells are showing decline in water level in 2 to 4 m range and remaining 8.3% (88) are in the range of more than 4 m. Rise in water level in majority of wells observed in Assam, Kerala, Odisha, Tamil Nadu, Telangana, Uttar Pradesh, West Bengal, Delhi and Jammu and Kashmir. Similarly fall in significant number of wells is observed in Arunachal Pradesh, Chhattisgarh, Gujarat, Haryana, Madhya Pradesh, Punjab and Puducherry.

ANNUAL WATER LEVEL FLUCTUATION (AUGUST 2022 - AUGUST 2021)

A comparison of depth to water level of August 2022 with August 2021 reveals that out of total 1956 wells analysed (*Annexure-XXI*), 937 (47.9%) of wells are showing rise in water level, among which 22.4% (438) wells are showing rise of less than 2 m. About 10.0% (196) wells are showing rise in water level in the range of 2 to 4 m and 15.5% (303) wells are showing rise in the range of more than 4 m. Among the 968 (49.5%) wells showing decline in water level, 26.2% (513) wells are showing decline in water in the range of 0 to 2 m. 11.8% (231) wells are showing decline in water level in 2 to 4 m range and remaining 11.5% (224) are in the range of more than 4 m. Rise in water level in majority of wells observed in Andhra Pradesh, Chhattisgarh, Goa, Gujarat, Haryana, Jharkhand, Karnataka, Madhya Pradesh, Maharashtra, Odisha, Punjab, Tamil Nadu, Chandigarh, Delhi, Jammu and Kashmir and Puducherry. Similarly fall in significant number of wells is observed in Assam, Bihar, Meghalaya, Telangana and West Bengal.

ANNUAL WATER LEVEL FLUCTUATION (NOVEMBER 2022 - NOVEMBER 2021)

A comparison of depth to water level of November 2022 with November 2021 reveals that out of total 1900 wells analysed (*Annexure-XXII*), 783 (41.2%) of wells are showing rise in water level, among which 23.3% (442) wells are showing rise of less than 2 m. About 8.2% (156) wells are showing rise in water level in the range of 2 to 4 m and 9.7% (185) wells are showing rise in the range of more than 4 m. Among the 1104 (58.1%) wells showing decline in water level, 32.6% (619) wells are showing decline in water in the range of 0 to 2 m. 15.9% (303) wells are showing decline in water level in 2 to 4 m range and remaining 9.6% (182) are in the range of more than 4 m. Rise in water level in majority of wells observed in Andhra Pradesh, Arunachal Pradesh, Assam, Karnataka, Madhya Pradesh, Meghalaya, Odisha, Telangana and Puducherry. Similarly fall in significant number of wells is observed in Chhattisgarh, Goa, Haryana, Jharkhand, Kerala, Tamil Nadu, West Bengal and Chandigarh.

ANNUAL WATER LEVEL FLUCTUATION (JANUARY 2023 - JANUARY 2022)

A comparison of depth to water level of January 2023 with January 2022 reveals that out of total 2068 wells analysed (*Annexure-XXIII*), 597 (28.9%) of wells are showing rise in water level, among which 19.0% (393) wells are showing rise of less than 2 m. About 4.5% (93) wells are showing rise in water level in the range of 2 to 4 m and 5.4% (111) wells are showing rise in the range of more than 4 m. Among the 1458 (70.5%) wells showing decline in water level, 38.0% (786) wells are showing decline in water in the range of 0 to 2 m. 15.3% (316) wells are showing decline in water level in 2 to 4 m range and remaining 17.2% (356) are in the range of more than 4 m. Rise in water level in majority of wells observed in Assam, Meghalaya, Chhattisgarh and Chandigarh. Similarly fall in significant number of wells is observed in Andhra Pradesh, Goa, Gujarat, Haryana, Karnataka, Kerala, Madhya Pradesh, Maharashtra, Odisha, Punjab, Tamil Nadu, Telangana and West Bengal

3.2.3 SEASONAL WATER LEVEL FLUCTUATION IN DEEPER AQUIFER

SEASONAL WATER LEVEL FLUCTUATION (PRE-MONSOON 2022- AUGUST 2022)

A comparison of depth to water level of pre-monsoon 2022 with August 2022 indicates that out of analysed 2086 wells (*Annexure-XXIV*), about 71.4% (1490) of wells are showing rise in water levels, out of which 28.3% (591) wells are showing rise of less than 2 m range. About 16.6% (346) wells are showing rise in water level in the range of 2 to 4 m and another 26.5% (553) wells are showing rise in water in range of more than 4 m. Similarly, 28.0% (584) wells are showing decline in water level, out of which 17.9% (373) wells are showing decline in water in the range of 0 to 2 m, 4.9% (103) wells are showing fall in water level in the range of 2 to 4 m and the remaining 5.2% (108) wells are showing fall in water level of more than 4 m. Rise in water level more than 4 m is mostly prominent all over the country covering in all the states except Haryana, Punjab, Tamil Nadu and Chandigarh. Fall of 2 to 4 m or more is observed in Andhra Pradesh, Gujarat, Haryana, Punjab, Tamil Nadu and West Bengal. Rise in water levels is observed in Andhra Pradesh, Assam, Bihar, Chhattisgarh, Jharkhand, Karnataka, Madhya Pradesh, Maharashtra, Meghalaya, Odisha, Telangana, West Bengal, Delhi and Jammu and Kashmir.

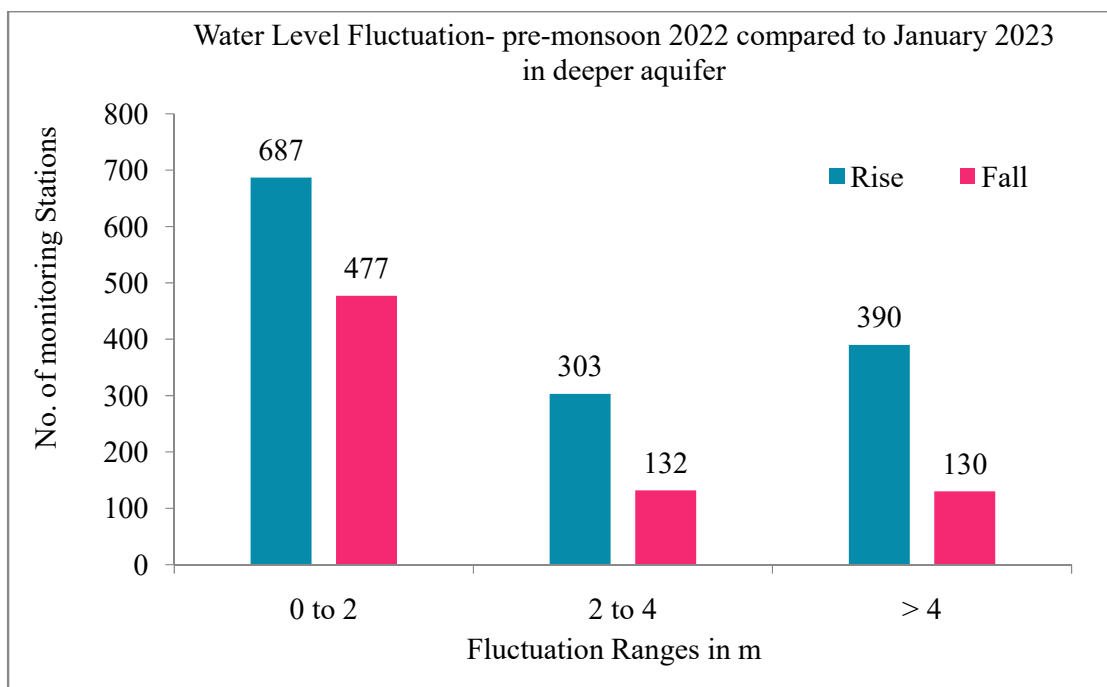

SEASONAL WATER LEVEL FLUCTUATION (PRE-MONSOON 2022- NOVEMBER 2022)

A comparison of depth to water level of pre-monsoon 2022 with November 2022 indicates that out of analysed 2231 wells (*Annexure-XXV*), about 77.4% (1727) of wells are showing rise in water levels, out of which 31.6% (705) wells are showing rise of less than 2 m range. About 19.3% (430) wells are showing rise in water level in the range of 2 to 4 m and another 26.5% (592) wells are showing rise in water in range of more than 4 m. Similarly, 22.1% (494) wells are showing decline in water level, out of which 15.8% (353) wells are showing decline in water in the range of 0 to 2 m, 3.5% (78) wells are showing fall in water level in the range of 2 to 4 m and the remaining 2.8% (63) wells are showing fall in water level of more than 4 m. Rise in water level is mostly prominent all over the country covering in all the states. Fall of 2 to 4 m or more is observed in Chhattisgarh, Haryana, Karnataka, Punjab, Tamil Nadu and West Bengal. Rise in water levels is observed in Andhra Pradesh, Assam, Chhattisgarh, Goa, Gujarat, Karnataka, Kerala, Madhya Pradesh, Maharashtra, Odisha, Tamil Nadu, Telangana, Uttar Pradesh, West Bengal and Puducherry.

SEASONAL WATER LEVEL FLUCTUATION (PRE-MONSOON 2022- JANUARY 2023)

A comparison of depth to water level of pre-monsoon 2022 with January 2023 indicates that out of analysed 2122 wells (*Annexure-XXVI*), about 65.0% (1380) of wells are showing rise in water levels, out of which 32.4% (687) wells are showing rise of less than 2 m range. About 14.3% (303) wells are showing rise in water level in the range of 2 to 4 m and another 18.4% (390) wells are showing rise in water in range of more than 4 m. Similarly, 34.8% (739) wells are showing decline in water level, out of which 22.5% (477) wells are showing decline in water in the range of 0 to 2 m, 6.2% (132) wells are showing fall in water level in the range of 2 to 4 m and the remaining 6.1% (130) wells are showing fall in water level of more than 4 m. Rise in water level is mostly prominent all over the country covering in all the states except West Bengal and Punjab. Fall of 2 to 4 m or more is observed in scattered patches in Chhattisgarh, Gujarat, Tamil Nadu, Odisha and West Bengal. Rise in water levels is observed in all most all states. Rise of more than 4 m is observed in Andhra Pradesh, Chhattisgarh, Gujarat, Haryana, Karnataka, Madhya Pradesh, Maharashtra, Odisha, Tamil Nadu, Telangana, West Bengal and Puducherry

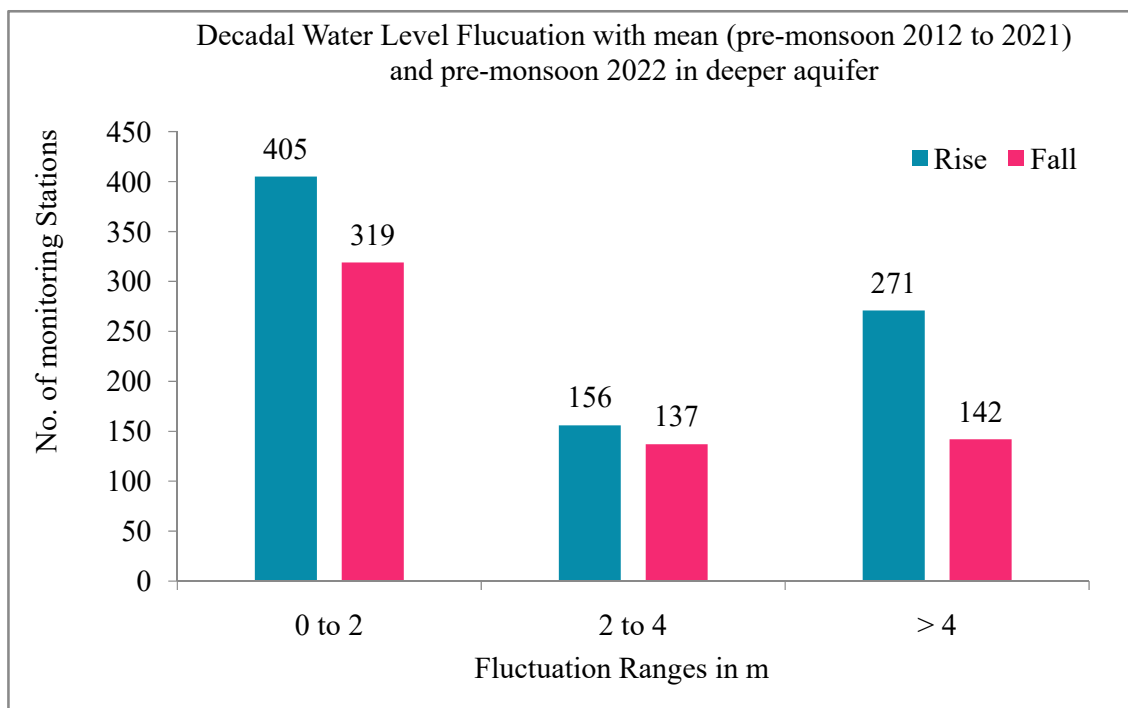

3.3.4 DECADAL WATER LEVEL FLUCTUATION IN DEEPER AQUIFER

WATER LEVEL FLUCTUATION WITH DECADAL MEAN (PRE-MONSOON-2012 TO PRE-MONSOON-2021) TO PRE-MONSOON 2022 IN DEEPER AQUIFER

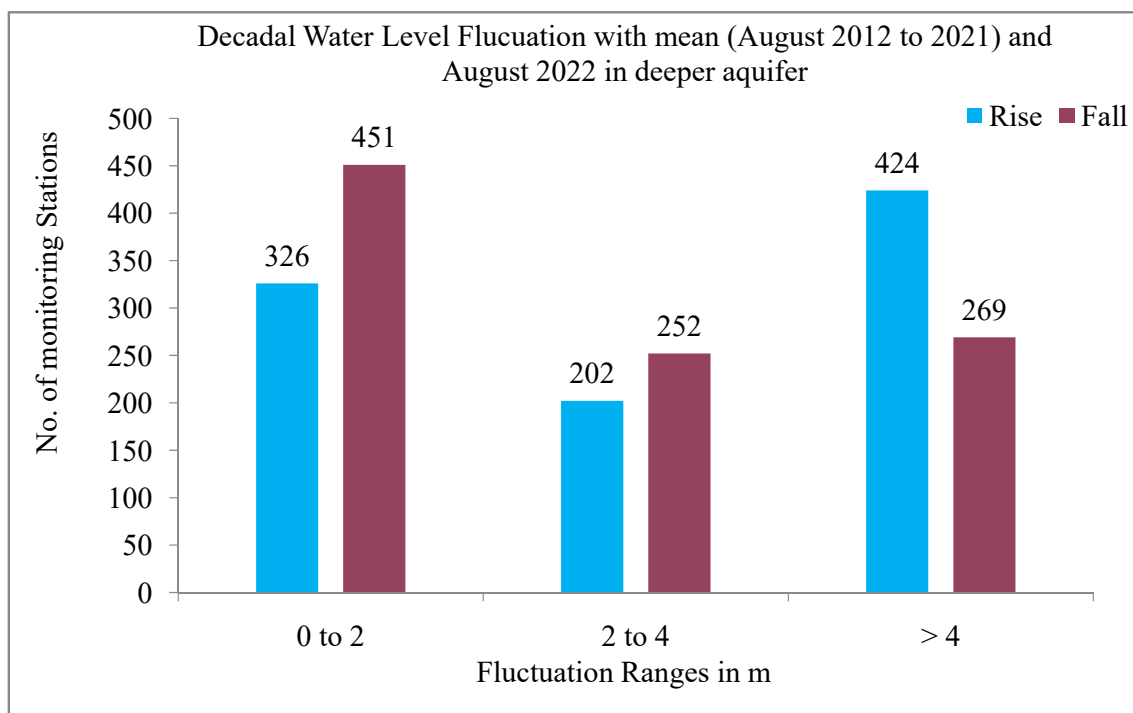

A comparison of depth to water level of pre-monsoon 2022 with decadal mean of pre-monsoon (2012-2021) indicates that, out of total 1430 wells analysed (*Annexure-XXVII*), 832 (58.2%) of wells are showing rise in water level, among which 28.3% (405) wells are showing rise of less than 2 m. About 10.9% (156) wells are showing rise in water level in the range of 2 to 4 m and only 19.0% (271) wells are showing rise in the range of more than 4 m. Among the 598 (41.8%) wells showing decline in water level, 22.3% (319) wells are showing decline in water in the range of 0 to 2 m. 9.6% (137) wells are showing decline in water level in 2 to 4 m range and remaining 9.9% (142) are in the range of more than 4 m. Rise in water level in majority of wells observed in Andhra Pradesh, Assam, Chhattisgarh, Gujarat, Karnataka, Kerala, Madhya Pradesh, Maharashtra, Odisha, Tamil Nadu, Telangana, West Bengal, Andaman and Nicobar and Delhi. Similarly fall in significant number of wells is observed in Chhattisgarh, Goa, Gujarat, Haryana, Kerala, Madhya Pradesh, Odisha, Punjab, Tamil Nadu, West Bengal and Puducherry. Rise of more than 4 m is observed in

Andhra Pradesh, Chhattisgarh, Gujarat, Karnataka, Kerala, Madhya Pradesh, Maharashtra, Telangana and Delhi.

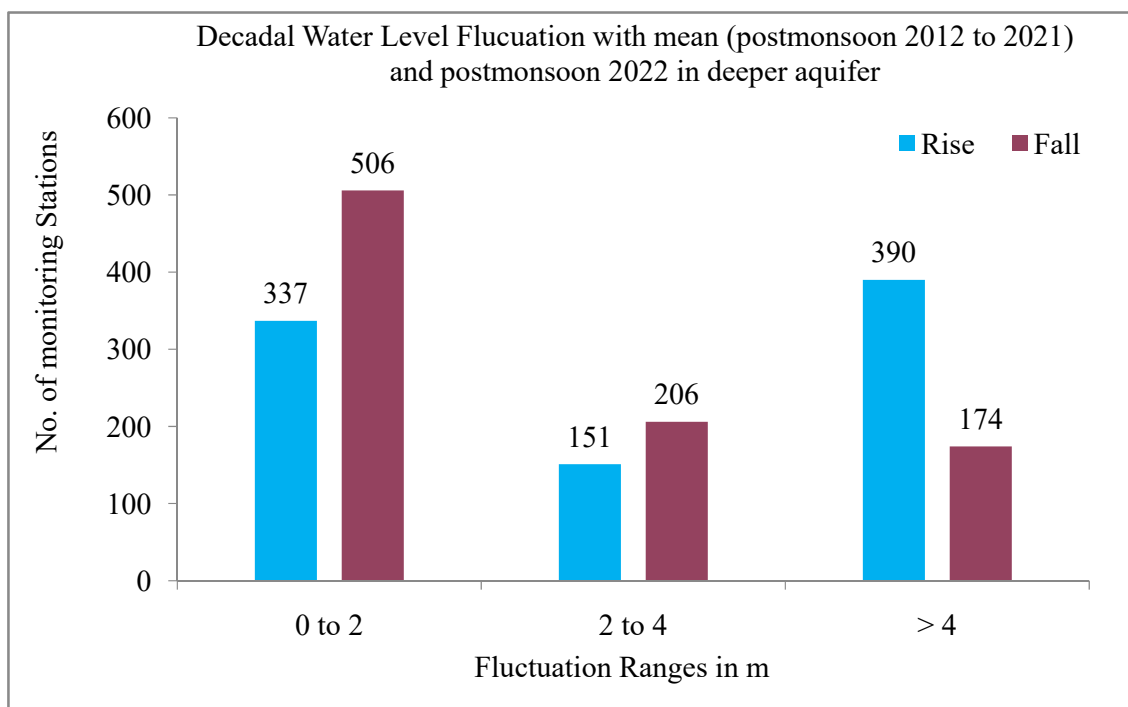

WATER LEVEL FLUCTUATION WITH DECADAL MEAN (AUGUST-2012 TO AUGUST-2021) TO AUGUST 2022 IN DEEPER AQUIFER

A comparison of depth to water level of August 2022 with decadal mean of August (2012-2021) indicates that, out of total 1924 wells analysed (*Annexure-XXVIII*), 952 (49.5%) of wells are showing rise in water level, among which 16.9% (326) wells are showing rise of less than 2 m. About 10.5% (202) wells are showing rise in water level in the range of 2 to 4 m and 22.0% (424) wells are showing rise in the range of more than 4 m. Among the 972 (50.5%) wells showing decline in water level, 23.4% (451) wells are showing decline in water in the range of 0 to 2 m. 13.1% (252) wells are showing decline in water level in 2 to 4 m range and remaining 14.0% (269) are in the range of more than 4 m. Rise in water level in majority of wells observed in Andhra Pradesh, Assam, Gujarat, Karnataka, Kerala, Madhya Pradesh, Odisha, Tamil Nadu, Delhi and Puducherry. Similarly fall in significant number of wells is observed in Chandigarh, Chhattisgarh, Gujarat, Haryana, Kerala, Odisha, Punjab, Telangana and West Bengal.

WATER LEVEL FLUCTUATION WITH DECADAL MEAN (NOVEMBER2012 TO NOVEMBER2021) TO NOVEMBER2022 IN DEEPER AQUIFER

A comparison of depth to water level of November 2022 with decadal mean of November (2012-2021) indicates that, out of total 1764 wells analysed (*Annexure-XXIX*), 878 (49.8%) of wells are showing rise in water level, among which 19.1% (337) wells are showing rise of less than 2 m. About 8.6% (151) wells are showing rise in water level in the range of 2 to 4 m and only 22.1% (390) wells are showing rise in the range of more than 4 m. Among the 886 (52.2%) wells showing decline in water level, 28.7% (506) wells are showing decline in water in the range of 0 to 2 m. 11.7% (206) wells are showing decline in water level in 2 to 4 m range and remaining 9.9% (174) are in the range of more than 4 m. Rise in water level in majority of wells observed in Andhra Pradesh, Assam, Gujarat, Karnataka, Madhya Pradesh, Maharashtra, Odisha, Tamil Nadu, Telangana, Chandigarh, Delhi and Puducherry. Similarly fall in significant number of wells is observed in Chhattisgarh, Goa, Gujarat, Haryana, Kerala, Punjab, Tripura and West Bengal.

WATER LEVEL FLUCTUATION WITH DECADAL MEAN (JANUARY-2013 TO JANUARY-2022) TO JANUARY-2023 IN DEEPER AQUIFER

A comparison of depth to water level of January 2023 with decadal mean of January (2013-2022) indicates that, out of total 2033 wells analysed(*Annexure-XXX*), 900(44.3%) of wells are showing rise in water level, out of which 18.8% (383) wells are showing rise of less than 2 m. About 7.2% (147) wells are showing rise in water level in the range of 2 to 4 m and 18.2% (370) wells are showing rise in the range of more than 4 m. Among the 1133 (55.7%) wells showing decline in water level, 25.7% (532) wells are showing decline in water in the range of 0 to 2 m. 12.2% (248) wells are showing decline in water level in 2 to 4 m range and remaining 17.8% (362) are in the range of more than 4 m. Rise in water level in majority of wells observed in Andhra Pradesh, Assam, Chhattisgarh, Gujarat, Karnataka, Madhya Pradesh, Maharashtra, Tamil Nadu, Telangana, Delhi and Puducherry. Similarly fall in

significant number of wells is observed in Chhattisgarh, Goa, Haryana, Kerala, Meghalaya, Odisha, Punjab, Telangana, West Bengal and Chandigarh.

State-wise Depth to Water Level Distribution of Percentage of Observation Wells Pre-Monsoon 2022in Unconfined Aquifer

N.B. 122 monitoring wells (1.2%) show no change in Water Level. Reduction in no. of wells analysed is due to less no of stations monitored during Pre-monsoon 2021 because of Covid-19 pandemic.
